

Service Manual

Color Laser Printer

DP-CL22

! WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

Laser diode properties (4 provided)

Laser output : 5 mW max
Wavelength : 785 nm
Emission duration : Continuous

注意 - ここを開くとクラス3B不可視レーザー放射が出る。ビームに身をさらさないこと。

CAUTION - Class 3B Invisible laser radiation when open. AVOID EXPOSURE TO BEAM.

VORSICHT - Unsichtbare Laserstrahlung nach Klasse 3B beim Öffnen. Kontakt mit Strahlung meiden.

ATTENTION - Appareil à rayonnement laser de classe 3B. Rayonnement laser invisible dangereux en cas d'ouverture. Exposition au faisceau dangereux.

ATENCIÓN - Clase 3B Radiación láser invisible al ser abierto. Evitar exponerse a los rayos.

VARNING - Klass 3B. Ösynlig laserstrålning när denna del är öppen. Strålen är farlig.

VAROITUS - Avattaessa purkautuu luokan 3B näkymätöntä laserähtelyä. Älä altista itseäsi säteilylle.

ADVASEL - Ueynlig laserstråling i klasse 3B ved åbning. Undgå udsættelse for stråling.

ADVASEL - Klasse 3B, usynlig laserstråling ved åbning. Unngå eksponering for strålen.

警告 - 打开时有 3B 级不可见激光辐射。请避免暴露于光源。

This printer utilizes a laser. Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by in the Schematic Diagrams, Circuit Board Diagrams, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire or other hazards. Do not modify the original design without permission of manufacturer.

IMPORTANT INFORMATION ABOUT FREE, (PbF), SOLDERING

If lead free solder was used in the manufacture of this product, the printed circuit boards will be marked PbF. Standard leaded, (Pb), solder can be used as usual on boards without the PbF mark.

When this mark does appear, please read and follow the special instructions described in this manual on the use of PbF and how it might be permissible to use Pb solder during service and repair work.

IMPORTANT INFORMATION ABOUT, (PbF), SOLDERING

If lead free solder was used in the manufacture of this product, the printed circuit boards will be marked PbF. Standard leaded, (Pb), solder can be used as usual on boards without the PbF mark. When this mark does appear, please read and follow the special instructions described in this manual on the use of PbF and how it might be permissible to use Pb solder during service and repair work.

1.2. Options, Accessories and Supplies

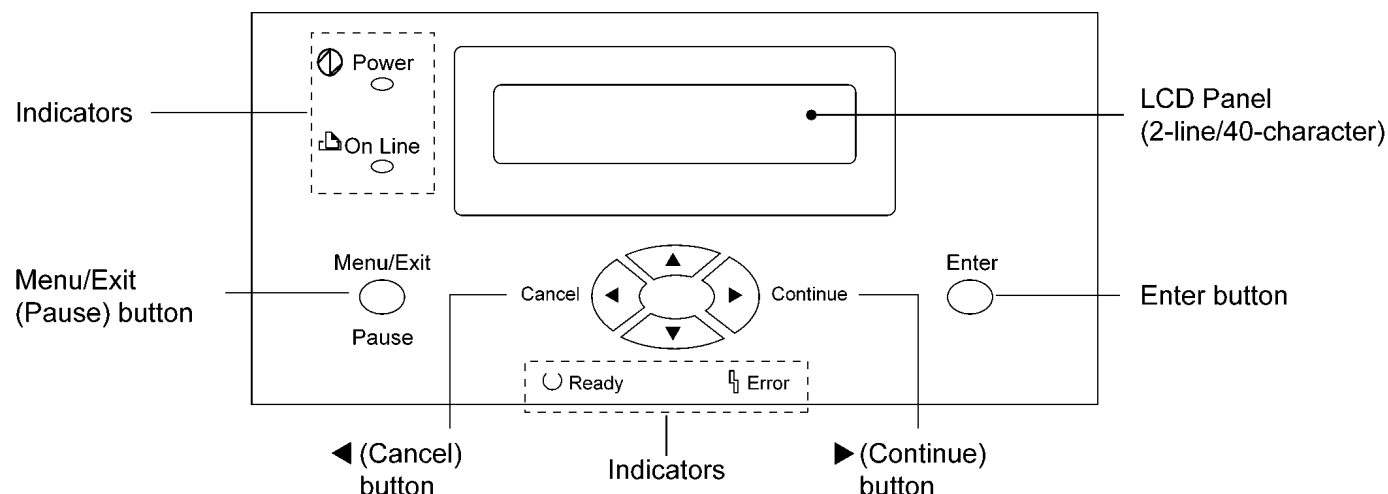

Model No.	Description	Remarks
DQ-UR3K	Black Toner Cartridge 6K	Average Life (6,000 pages *1)
DQ-UR3C	Cyan Toner Cartridge 6K	Average Life (6,000 pages *1)
DQ-UR3M	Magenta Toner Cartridge 6K	Average Life (6,000 pages *1)
DQ-UR3Y	Yellow Toner Cartridge 6K	Average Life (6,000 pages *1)
DQ-UR4C	Cyan Toner Cartridge 3K	Average Life (3,000 pages *1)
DQ-UR4M	Magenta Toner Cartridge 3K	Average Life (3,000 pages *1)
DQ-UR4Y	Yellow Toner Cartridge 3K	Average Life (3,000 pages *1)
DQ-UP3K	Black Print Cartridge	Average Life (15,000 pages *1)
DQ-UP3C	Color Print Cartridge	Average Life (15,000 pages *1)
DQ-FU3	Fuser Unit	Average Life (100,000 pages *1)
DQ-BF3	Waste Toner Cartridge	Average Life (14,000 pages *1)
DQ-BE3	Accumulator Unit	Average Life (100,000 pages *1)
DQ-BR3	Transfer Roller	Average Life (100,000 pages *1)
DA-DS1	Optional Paper Feeder	
KX-CLEM3	128MB DIMM	
KX-CLEM4	256MB DIMM	
KX-CLHD2	Hard Disk Drive	
DA-MC3	Upgrade Kit (PS3)	

*1

The rated life expectancy of each consumable is based on printing under specific operating conditions such as page coverage for a particular page size (5% coverage per color at 600 x 600 dpi resolution on A4 size paper). The actual consumables life will vary depending on its use and other printing variables including page coverage, page size, media type, print resolution, continues or intermittent printing, number of color planes, ambient temperature and humidity.

1.3. Printer Panel

1.3.1. Panel Operation

Button Operation

Button	Operation
Menu/Exit  Pause	While Ready is displayed on the LCD, pressing this button will allow you to enter the Menu mode.
	In the Menu mode, pressing this button exits the Menu mode and Ready is displayed on the LCD.
	When Processing or Printing is displayed in the upper line of the LCD, pressing this button will allow you to pause printing. While Pause printing is displayed on the LCD, pressing this button will allow you to resume printing.
	Pressing this button displays the previous item of the same level menu.
	Pressing this button decreases the numerical value one by one. Holding down this button will allow you to scroll faster.
	Pressing this button displays the next item of the same level menu.
 Continue	Pressing this button goes to the lower level menu. If the lower level menu does not exist, the action will be ignored.
	When performing the manual duplex printing function, after even pages are printed, odd pages are printed by pressing this button.
	When LOAD Letter or Memory Overflow , etc. appears on the LCD, you can print the current job anyhow by pressing this button. However, the print may not be proper.
Cancel 	Pressing this button goes to the upper level menu. If the upper level menu does not exist, the action will be ignored.
	While the printer prints, pressing this button will allow you to stop printing or cancel processing the current job.
Enter 	Pressing this button goes to the lower level menu. The selection is activated by pressing this button if the lower level menu does not exist.
	When the life of the Accumulator Unit, Fuser Unit or Transfer Roller is worn out in the middle of printing, hold down this button more than 3 seconds after replacing the component. The remaining life is reset and the replacement error will be cleared.

1.3.2. LED Indicator

Three indicators show the following printer's status:

Indicator	Printer Status
 Power 	Printer is turned on.
 Power 	Printer is in the Power Save mode.
 Power 	Printer is turned off.
 On Line 	Printer is ready for printing. (Printer warms up and starts printing automatically when it receives print data.)
 On Line 	Printer is in the Off Line.
 Ready  Error 	Printer is in the normal condition. Printer is not in error conditions.
 Ready  Error 	Printer is receiving data, printing or data remains in the memory. Printer is in the Menu mode.
 Ready  Error 	Printer recoverable errors (media jam, media empty, etc.) has occurred.
 Ready  Error 	An internal error (Call for Service Error) has occurred.

1.4. External View

(Front View)

(Rear View)

1.5. Main Components Layout

1.6. PCB, Switches and Sensors Identification

Sensor/Switch/Board Name	Description
Paper Size Detection	For detecting the current selected paper size at the standard paper cassette.
Toner Empty Sensor Board	For detecting whether the toner is low (or empty) or not.
Temp./Humidity Sensor Board	For sensing the ambient temperature and humidity.
Paper Full Sensor Board	This board has the paper full sensor. The paper full sensor is for detecting whether the output paper tray is full.
Toner Cartridge Access Cover Detection Switch	For detecting whether the toner cartridge access cover is closed. If the toner cartridge access cover is opened, printing is not possible.
ADU Jam Detection Sensor Board	For detecting whether the paper is ejected from the ADU (Automatic Duplex Unit) within the proper time.
ADU Detection Sensor Switch	For detecting whether the ADU is installed.
MPT Paper Detection Sensor Board	For detecting whether the paper is set on the MPT (multi-purpose paper tray).
MPT Home Position Sensor Board	For detecting the home position of the MPT pickup roller.
Paper Empty/Registration Sensor Board	This board has the paper empty and registration sensors. The paper empty sensor is for detecting whether the paper is set on the standard paper cassette. The registration sensor is for detecting whether the sheet of paper arrived at the registration roller after being properly picked and traveling through the paper feed rollers.
OPC Cam Home Position Sensor Board	For detecting the home position of the OPC drum.
Acc. Cam Home Position Sensor Board	For detecting the home position of the accumulator cam and controlling the printing process.
Front/Right Door Open Detection Switch	For detecting whether the front door or right cover is opened.

Sensor/Switch/Board Name	Description
LSU Safety Interlock Switch	When the front door or right cover is opened (or both are opened), the power that is supplied to the laser diode drive circuit in the laser unit is shut off because this switch is opened
Front/Right Door Interlock Switch	When the front door or right cover is opened (or both are opened), the printing is not done because this switch is opened.
Waste Toner Cartridge Full Sensor Board	For detecting whether the waste toner cartridge is full.
Color Registration Sensor Board	For reading the Color Registration Check Pattern to calculate adjustment for the fine Color Registration Adjustment.

2 About Lead Free Solder

Note:

In the information below, Pb, the symbol for lead in the periodic table of elements, will refer to standard solder or solder that contains lead.

The Lead Free Solder (PbF) is made from Tin, (Sn), Silver, (Ag), and Copper, (Cu).

This model, and others like it, manufactured using lead free solder will have PbF stamped on the PCB. For service and repair work we suggest using the same type of solder although, with some precautions, standard Pb solder can also be used.

Caution

- PbF solder has a melting point that is 50° ~ 70° F, (30° ~ 40°C) higher than Pb solder. Please use a soldering iron with temperature control and adjust it to 700° ± 20° F, (370° ± 10°C). In case you are using a high temperature soldering iron, please be careful not to heat too long.
- PbF solder will tend to splash if it is heated much higher than its melting point, approximately 1100°F, (600°C).
- If you must use Pb solder on a PCB manufactured using PbF solder, remove as much of the original PbF solder as possible and be sure that any remaining is melted prior to applying the Pb solder.
- When applying PbF solder to double layered boards, please check the component side for excess which may flow onto the opposite side (See figure, below).

2.1. Suggested PbF Solder

We recommend you to use the following solder when re-soldering component for repair. Before using other Pb free solder than the following solder, be sure to confirm a solder maker you appoint has made license agreements to be required when using Pb free solder legally.

Supplier: Senju Metal Industry Co., Ltd. (<http://www.senju-m.co.jp>)

Part Description in Senju: ECO SOLDER RMA02 P3 M705 Series

Note:

When the recommended PbF solder is not available at Senju Metal Industry Co., Ltd., see section 14.10 PbF Solder Service Part Number.

2.2. How to recognize that PbF Free solder is used

3 Installation, Setup, and Repacking

3.1. Installation Requirements

3.1.1. Environment

1. Temperature Range :10 °C - 32.5 °C (50 °F - 90.5 °F) (Temperature fluctuation \pm 10 °C per hour or less)
2. Humidity Range :20% RH - 80% RH (Humidity fluctuation \pm 20 °C per hour or less)
3. Weight : Gross; Approx. 33 kg (72.77 lbs.), Net; Approx. 30 kg (66.15 lbs) excluding packing material
4. Place the unit on a stable, level surface.
5. Do not install the unit under the following conditions.
 - a. Extremely high or low temperature
 - b. Extremely high or low humidity
 - c. Direct exposure to sunlight
 - d. Areas of high dust concentration
 - e. Areas of poor ventilation
 - f. Areas exposed to chemical fumes
 - g. Areas with extreme vibration
 - h. Directly in air conditioning flow

3.1.2. Minimum Space Requirements

1. Right : 33 cm (13")
2. Left : 11 cm (4.3")
3. Rear : 15 cm (5.9")

Note:

When you install a consumable component or replace it with a new one, additional space may be required.

3.2. Setup

3.2.1. Removing the Packing Material

1. Remove the plastic bag from the printer.
2. Remove any adhesive tape.

Note:

Please do not throw away the packing materials. They may be required to ship or transport the printer. To provide optimum print quality, the unit must be kept upright and level at all times.

3.2.2. Installing the Toner Cartridge

1. Open the toner cartridge access cover (toner door) and remove the sealing tapes.

2. Open the plastic bags and take out the toner cartridges. Shake the toner cartridges several times.

3. Insert the toner cartridges in the appropriately labeled slots. From right to left, the order of the color toner cartridges is Black (1), Cyan (2), Magenta (3), Yellow (4).

4. Close the toner cartridge access cover (toner door).

3.2.3. Installing the Print Cartridge

1. Open the right cover (right side door).

2. Unlock and open the print cartridge holder.

3. Open the plastic bags and take out the print cartridges.

4. Remove the seal covers.

Note:

To prevent damage to the print cartridge,

- Do not touch the green drum surface.
- Do not expose to light for more than 45 sec.
- Do not expose to direct sunlight.

5. Holding the color print cartridge with the protective tray, match the arrow marks (▼) then insert the color print cartridge half way into the printer.

6. Firmly push the color print cartridge until it snaps into place.

- Store the protective tray, seal covers, packing materials and cartons for repacking in future.

7. Repeat steps 4 - 6 for the black print cartridge.

8. Install the waste toner cartridge (1) and slide the green lever (2).

9. Close the print cartridge holder until it clicks (1) and locks it (2).

10. Close the right side cover (door).

3.3. Repacking

Prepare the unit before shipping.

Note:

It is highly recommended that users keep the original carton and All packing materials. Please follow these instructions when moving the printer.

- Please use the original carton and all of the original packing material.
- Improper repacking of the printer may result in a charge to repair the unit or a cleaning charge to remove spilled toner.
- Since the printer uses dry toner, extreme care must be taken when handling. The printer should be handled in the upright (vertical) position.

Material Required

- Original carton and packing materials
- Newspaper or drop cloth
- Shipping tape and scissors

- 1 Turn off the printer, remove the power cord and all interface cables.
- 2 Open the right cover (right side door).

- 3 Slide the green lever for the waste toner cartridge to the right (RELEASE).

- 4 Remove the waste toner cartridge.

- Be sure the green lever is in the RELEASE position so that upper openings to waste toner cartridge are completely closed.

- 5 Insert the waste toner cartridge into a plastic bag and seal the end of the bag tightly.

- 6 Unlock the two levers (1) and open the print cartridge holder (2).

- 7 Pull out the color print cartridge halfway and remove it (2) while pressing the green stopper (1) on the left side.

Note:

- To prevent damage to the print cartridge;
 - Do not touch the green drum surface.
 - Do not expose to light for more than 45 minutes.
 - Do not expose to direct sunlight.

- 8 Close the PC shutter and wipe off any loose toner on the color print cartridge using a toner vacuum. Do not use a standard office vacuum; the toner will not be retained by typical vacuum dust collectors.

Caution 1:

If replacing the upper seal cover though the toner is on the color print cartridge, the toner will be scattered when removing the upper seal cover. The scattered toner may be attached to the OPC drum and the poor print quality will be caused.

Caution 2:

If the print cartridge is wiped using a toner vacuum when the PC shutter is opening, the toner in the print cartridge is sucked and charged. This charge is discharged to the OPC drum and the OPC drum may be damaged. Wipe off the toner on the print cartridge using care that the PC shutter is not opened.

Move the PC shutter in this arrow direction to close the PC shutter.

- 9 Replace the protective tray (1), upper seal covers (2-4) and protective caps (5).

- Be sure the three sealing levers of the print cartridge are exposed through the lower seal cover.

- 10 Insert the color print cartridge into the black plastic bag and seal the end of the bag tightly with adhesive tape.

- 11 Pull out the black print cartridge.

Note:

- To prevent damage to the print cartridge;
 - Do not touch the green drum surface.
 - Do not expose to light for more than 45 minutes.
 - Do not expose to direct sunlight.

- 12 Close the PC shutter and wipe off any loose toner on the black print cartridge using a toner vacuum. Do not use a standard office vacuum; the toner will not be retained by typical vacuum dust collectors.

Caution 1:

If replacing the upper seal cover though the toner is on the black print cartridge, the toner will be scattered when removing the upper seal cover. The scattered toner may be attached to the OPC drum and the poor print quality will be caused.

Caution 2:

If the print cartridge is wiped using a toner vacuum when the PC shutter is opening, the toner in the print cartridge is sucked and charged. This charge is discharged to the OPC drum and the OPC drum may be damaged. Wipe off the toner on the print cartridge using care that the PC shutter is not opened.

Move the PC shutter in this arrow direction to close the PC shutter.

- 13 Replace the protective tray (1), upper seal cover (2) and protective cap (3).

- Be sure the sealing lever of the print cartridge is exposed through the lower seal cover.

- 14 Insert the black print cartridge into the black plastic bag and seal the end of the bag tightly with adhesive tape.

- 15 Close the print cartridge holder [(1)-(2)] and lock it. Close the right cover (3) (right side door).

Note:

- Be sure the accumulator unit is kept in the printer.

- 16 Remove the media from the multi-purpose tray. Push the multi-purpose tray (1) and close the tray cover (2).

- 17 Pull the media tray (1) out of the printer. Remove the media (2) from the media tray and install the tray pad (3) into the media tray.

- 18 Install the media tray into the printer.

- 19 Close (1) and insert (2) the paper support into the printer.

- 20 Confirm all toner cartridges are completely installed in the printer.

If the hard disk drive option has been installed in the printer, confirm the hard disk drive is fastened with two screws provided. If it is not installed, proceed to step 26.

- 21 Remove the two thumb screws from the main control board.

- 24 Install the main control board back into the printer, as shown.

- 22 Pull out the main control board while holding the green handle.

- 25 Tighten the two thumb screws.

- 23 Reconfirm the hard disk drive is fastened with two screws. If it is not fastened, fasten it with two screws.

26 Repack the printer in the original shipping box.

- Make sure that you keep the printer upright and level when moving.

SAFETY CAUTION

- The printer weighs about 30 Kg (66 lbs.).
It must be handled by two people.

(1) Place the printer in the plastic bag on the lower cushion and wrap the printer with the plastic bag.

(2) Place the middle cushion on the lower cushion, upper cushion on the printer and middle cushion.

(3) Place the waste toner cartridge, black print cartridge and color print cartridge and accessory box on the upper cushion.

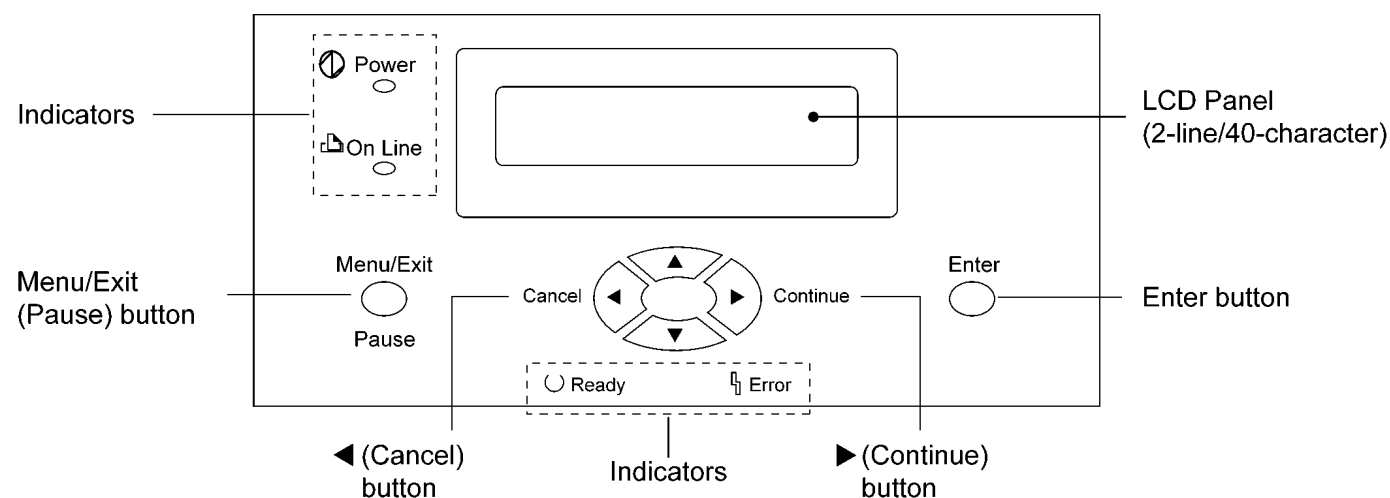

(4) Place the top carton and install the 4 joints.

4 User Mode Operation

4.1. User Mode Printer Panel Operation

4.1.1. Panel Operation

Button Operation

Button	Operation
Menu/Exit  Pause	While Ready is displayed on the LCD, pressing this button will allow you to enter the Menu mode.
	In the Menu mode, pressing this button exits the Menu mode and Ready is displayed on the LCD.
	When Processing or Printing is displayed in the upper line of the LCD, pressing this button will allow you to pause printing. While Pause printing is displayed on the LCD, pressing this button will allow you to resume printing.
	Pressing this button displays the previous item of the same level menu.
	Pressing this button decreases the numerical value one by one. Holding down this button will allow you to scroll faster.
	Pressing this button displays the next item of the same level menu.
	Pressing this button increases the numerical value of one by one. Holding down this button will allow you to scroll faster.
 Continue	Pressing this button goes to the lower level menu. If the lower level menu does not exist, the action will be ignored.
	When performing the manual duplex printing function, after even pages are printed, odd pages are printed by pressing this button.
	When LOAD Letter or Memory Overflow , etc. appears on the LCD, you can print the current job anyhow by pressing this button. However, the print may not be proper.
Cancel 	Pressing this button goes to the upper level menu. If the upper level menu does not exist, the action will be ignored.
	While the printer prints, pressing this button will allow you to stop printing or cancel processing the current job.
Enter 	Pressing this button goes to the lower level menu. The selection is activated by pressing this button if the lower level menu does not exist.
	When the life of the Accumulator Unit, Fuser Unit or Transfer Roller is worn out in the middle of printing, hold down this button more than 3 seconds after replacing the component. The remaining life is reset and the replacement error will be cleared.

4.1.2. LED Indicator

Three indicators show the following printer's status:

Indicator	Printer Status
 Power 	Printer is turned on.
 Power 	Printer is in the Power Save mode.
 Power 	Printer is turned off.
 On Line 	Printer is ready for printing. (Printer warms up and starts printing automatically when it receives print data.)
 On Line 	Printer is in the Off Line.
 Ready  Error 	Printer is in the normal condition. Printer is not in error conditions.
 Ready  Error 	Printer is receiving data, printing or data remains in the memory. Printer is in the Menu mode.
 Ready  Error 	Printer recoverable errors (media jam, media empty, etc.) has occurred.
 Ready  Error 	An internal error (Call for Service Error) has occurred.

4.2. User Mode Main Menu

This section covers the basic operation of this model.

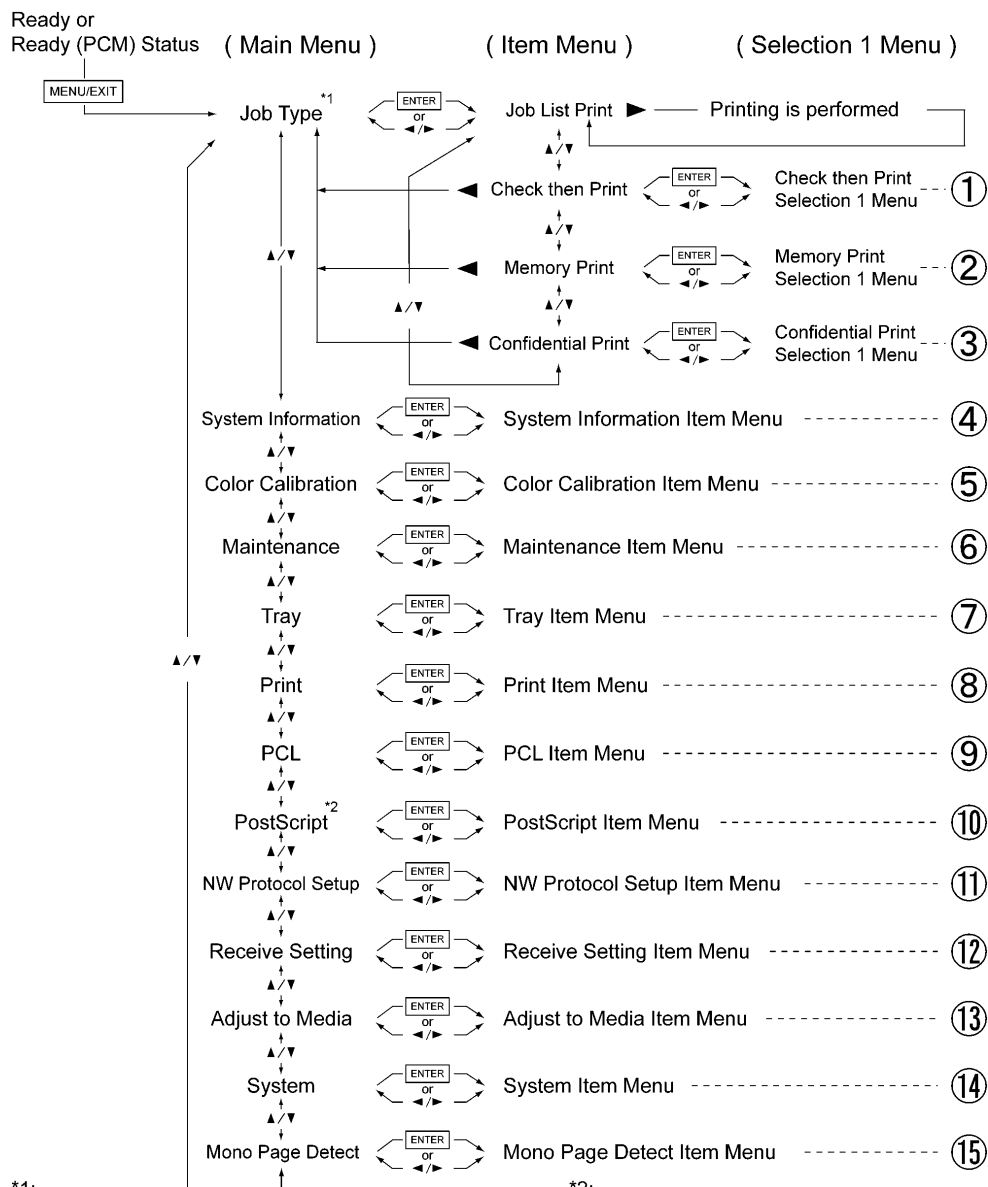

- 1 Plug in the power cord and connect an interface cable to the laser printer.
- 2 Turn on the power switch. The LCD displays "Initializing", then "Ready or Ready (PCM*)"
 - If the Optional Hard Disk Drive is installed, the LCD displays the "Initializing" and "HDD Accessing" alternately.
- 3 When Ready or Ready (PCM*) is displayed in the upper line of the LCD, press the Menu/Exit (Pause) button to enter the Menu Mode.

*: Print Count Manager is turned on.

The following chart shows all functions of MENU Mode that are displayed when selecting functions.

MENU/EXIT : Press the  button. **◀** : Press the  button. **◀/▶** : Press the  or  button.

ENTER : Press the  button. **▶** : Press the  button. **▲/▼** : Press the  or  button.

*1:
The menu is displayed only when a Hard Disk Drive (option) is installed in the printer.

*2:
The menu is displayed only when a PS Upgrade Kit (option) is installed in the printer.

4.3. Check then Print Selection 1 Menu

① Check then Print Selection 1 Menu

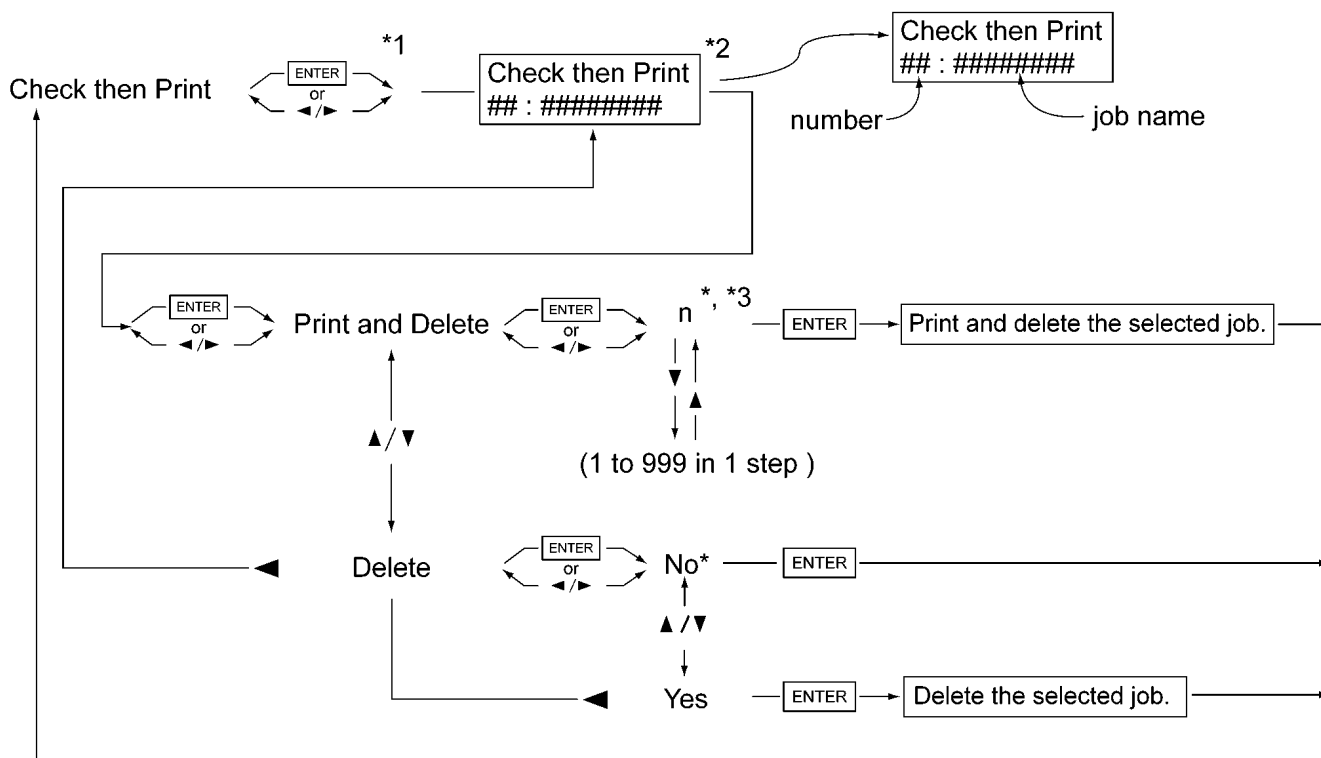

* : Default

*1 : The " No Job Available " will be displayed when pressing the Eenter or ► button if there are no print job.

*2 : Job Name is displayed on the LCD.

(Example) 1:, 2:, 3:, etc. is displayed by pressing the ▲ or ▼ button.

*3 : The number of copies "n (digit set with the printer driver)" is displayed.

4.4. Memory Print Item Menu

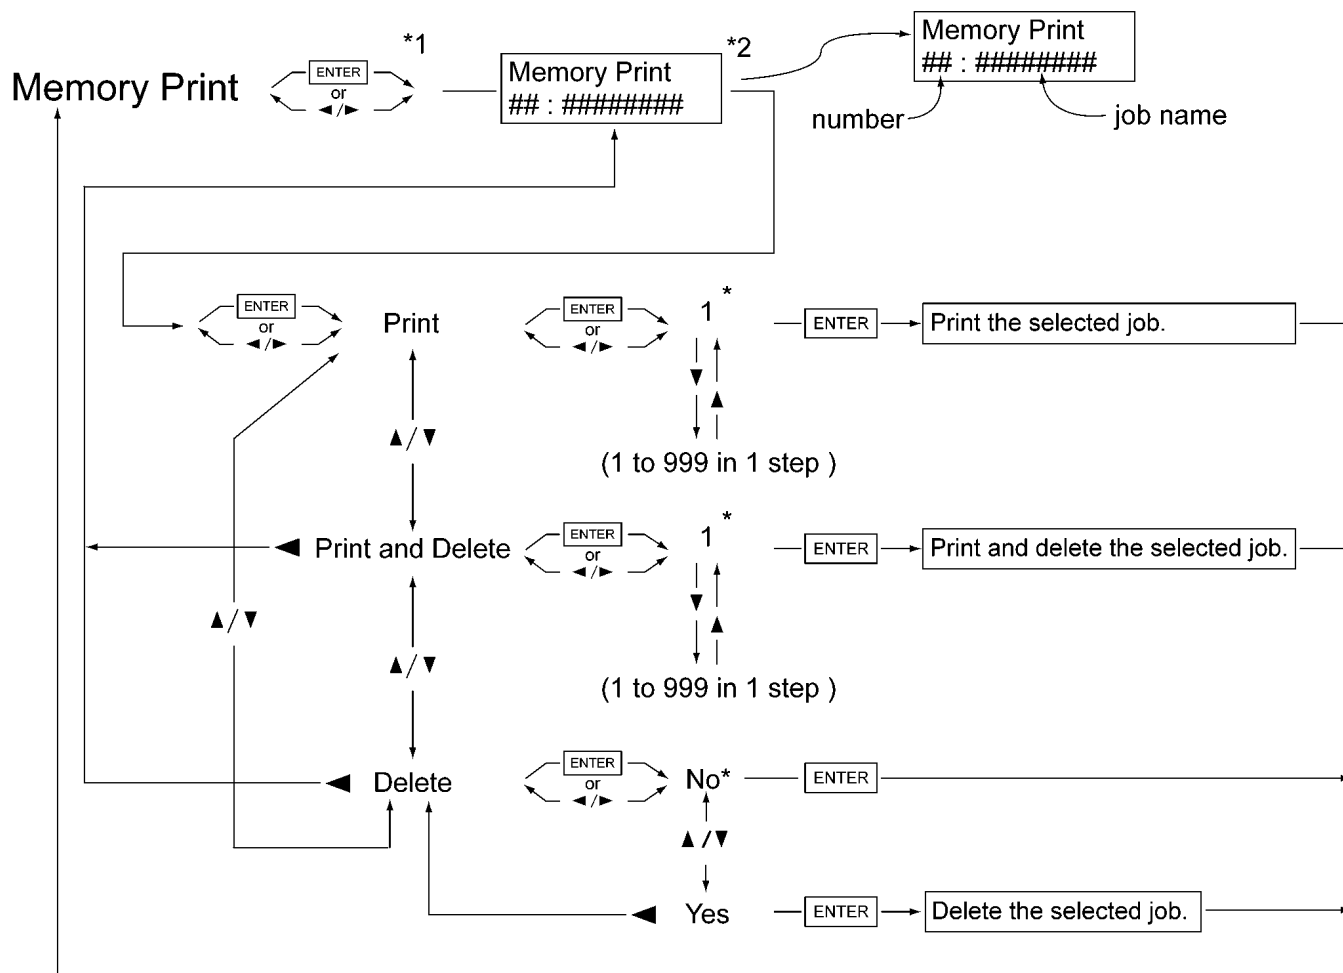

② Memory Print Selection 1 Menu

* : Default

*1 : The " No Job Available " will be displayed when pressing the Enter or ► button if there are no print job(s).

*2 : Job Name is displayed on the LCD.

(Example) 1:, 2:, 3:, etc. is displayed by pressing the ▲ or ▼ button.

4.5. Confidential Print Selection 1 Menu

③ Confidential Print Selection 1 Menu

* : Default

*1 : The " No Job Available " will be displayed when pressing the Enter or ► button if there are no print job(s).
Job Name is displayed on the LCD.

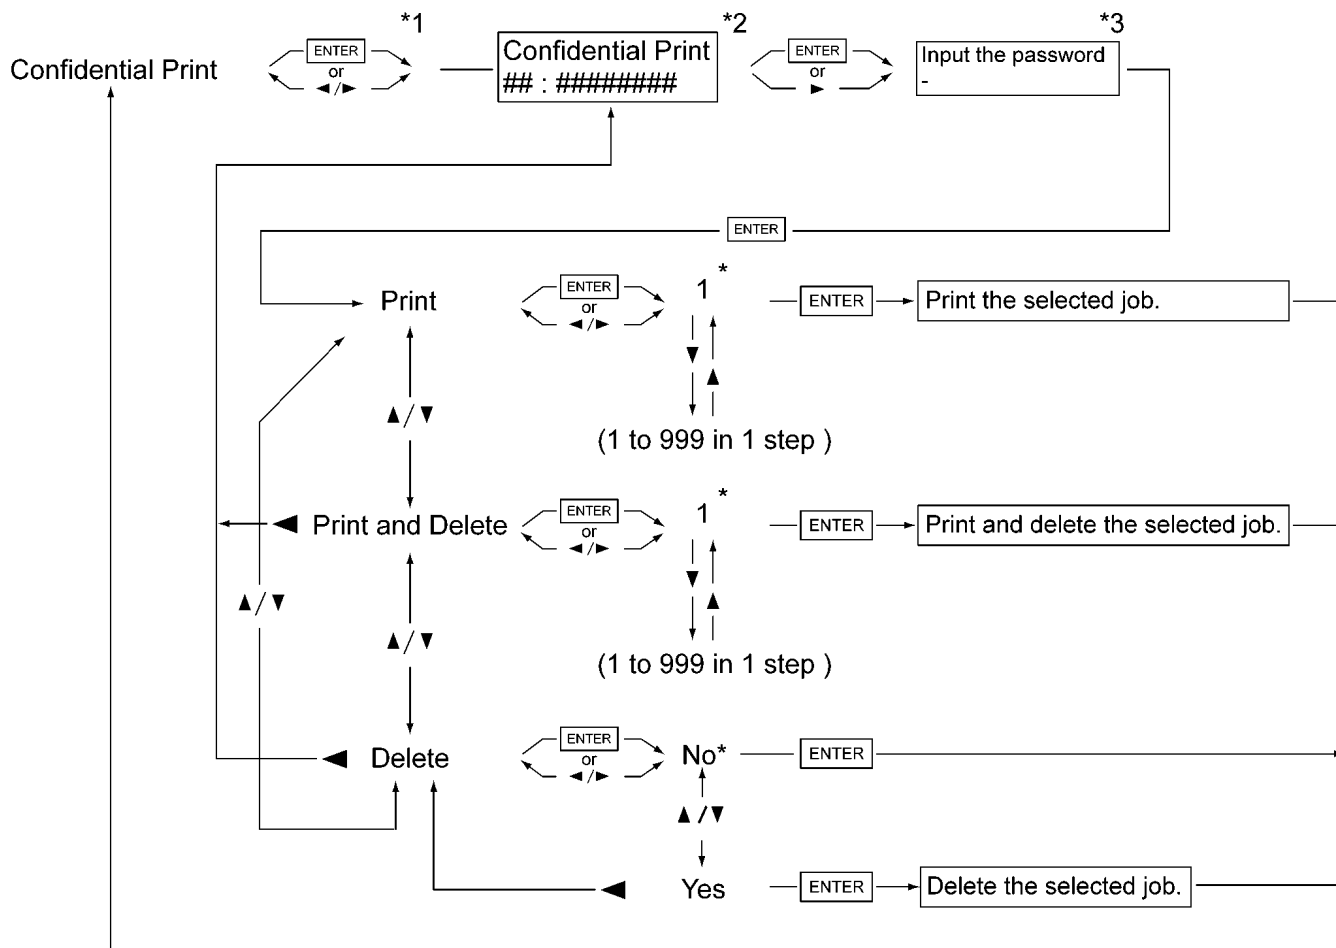

*2 : (Example) 1:, 2:, 3:, etc. is displayed by pressing the ▲ or ▼ button.

*3 : After selection, the password is checked.

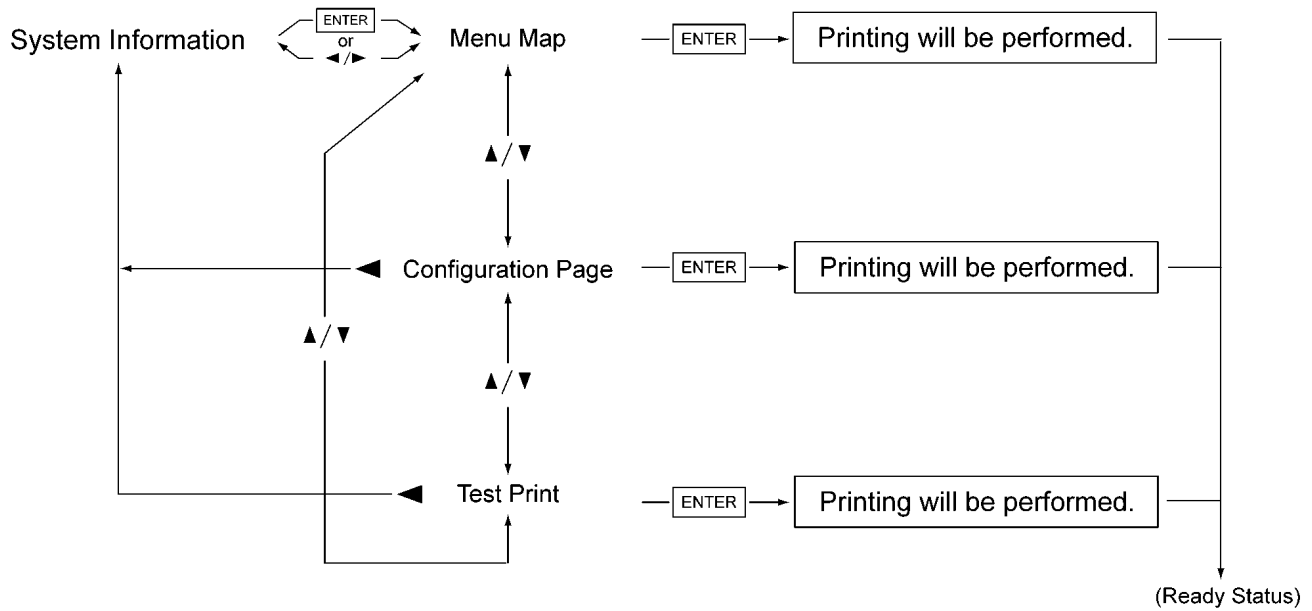

Select the number by pressing the ▲ or ▼ button, and press the Enter button to fix it. By repeating this step, input all password numbers. After inputting the password, press the Enter button. If inputting the wrong password, the printer is returned to the previous status and the job name is displayed. After pressing the Enter or ► button, input all the password numbers again.

If inputting the wrong number while inputting the password, move the cursor using the ◀ or ▶ button and retry inputting the password.

4.6. System Information Item Menu

④ System Information Item Menu

4.7. Color Calibration Item Menu

⑤ Color Calibration Item Menu

* : Default

*1: Setting a higher number provides darker colors and setting a lower number provides lighter colors.

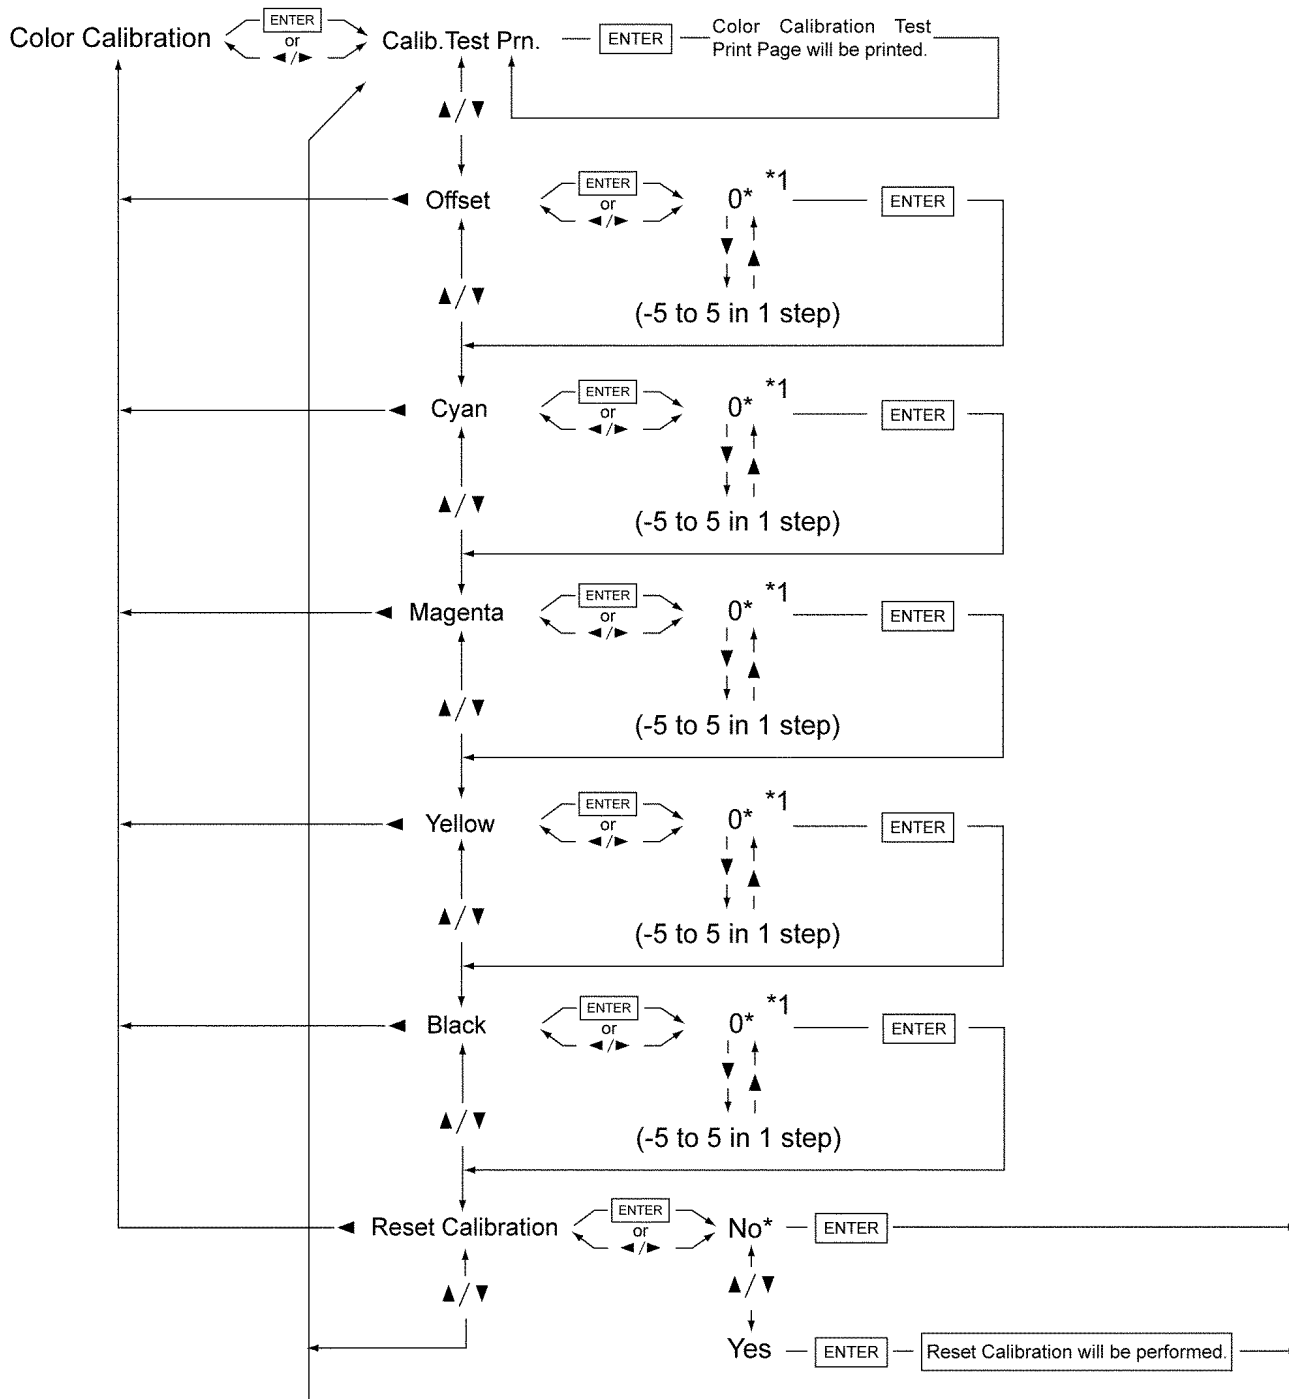

Note

Calib. Test Prn. : Prints a Color Calibration Test Print Page with the current density settings.

Offset : Adjusts the density for all colors (Cyan, Magenta Yellow and Black).

Cyan/Magenta/Yellow/Black : Adjusts the density for each color independently.

Reset Calibration : Setting Yes resets the current settings back to the default settings.

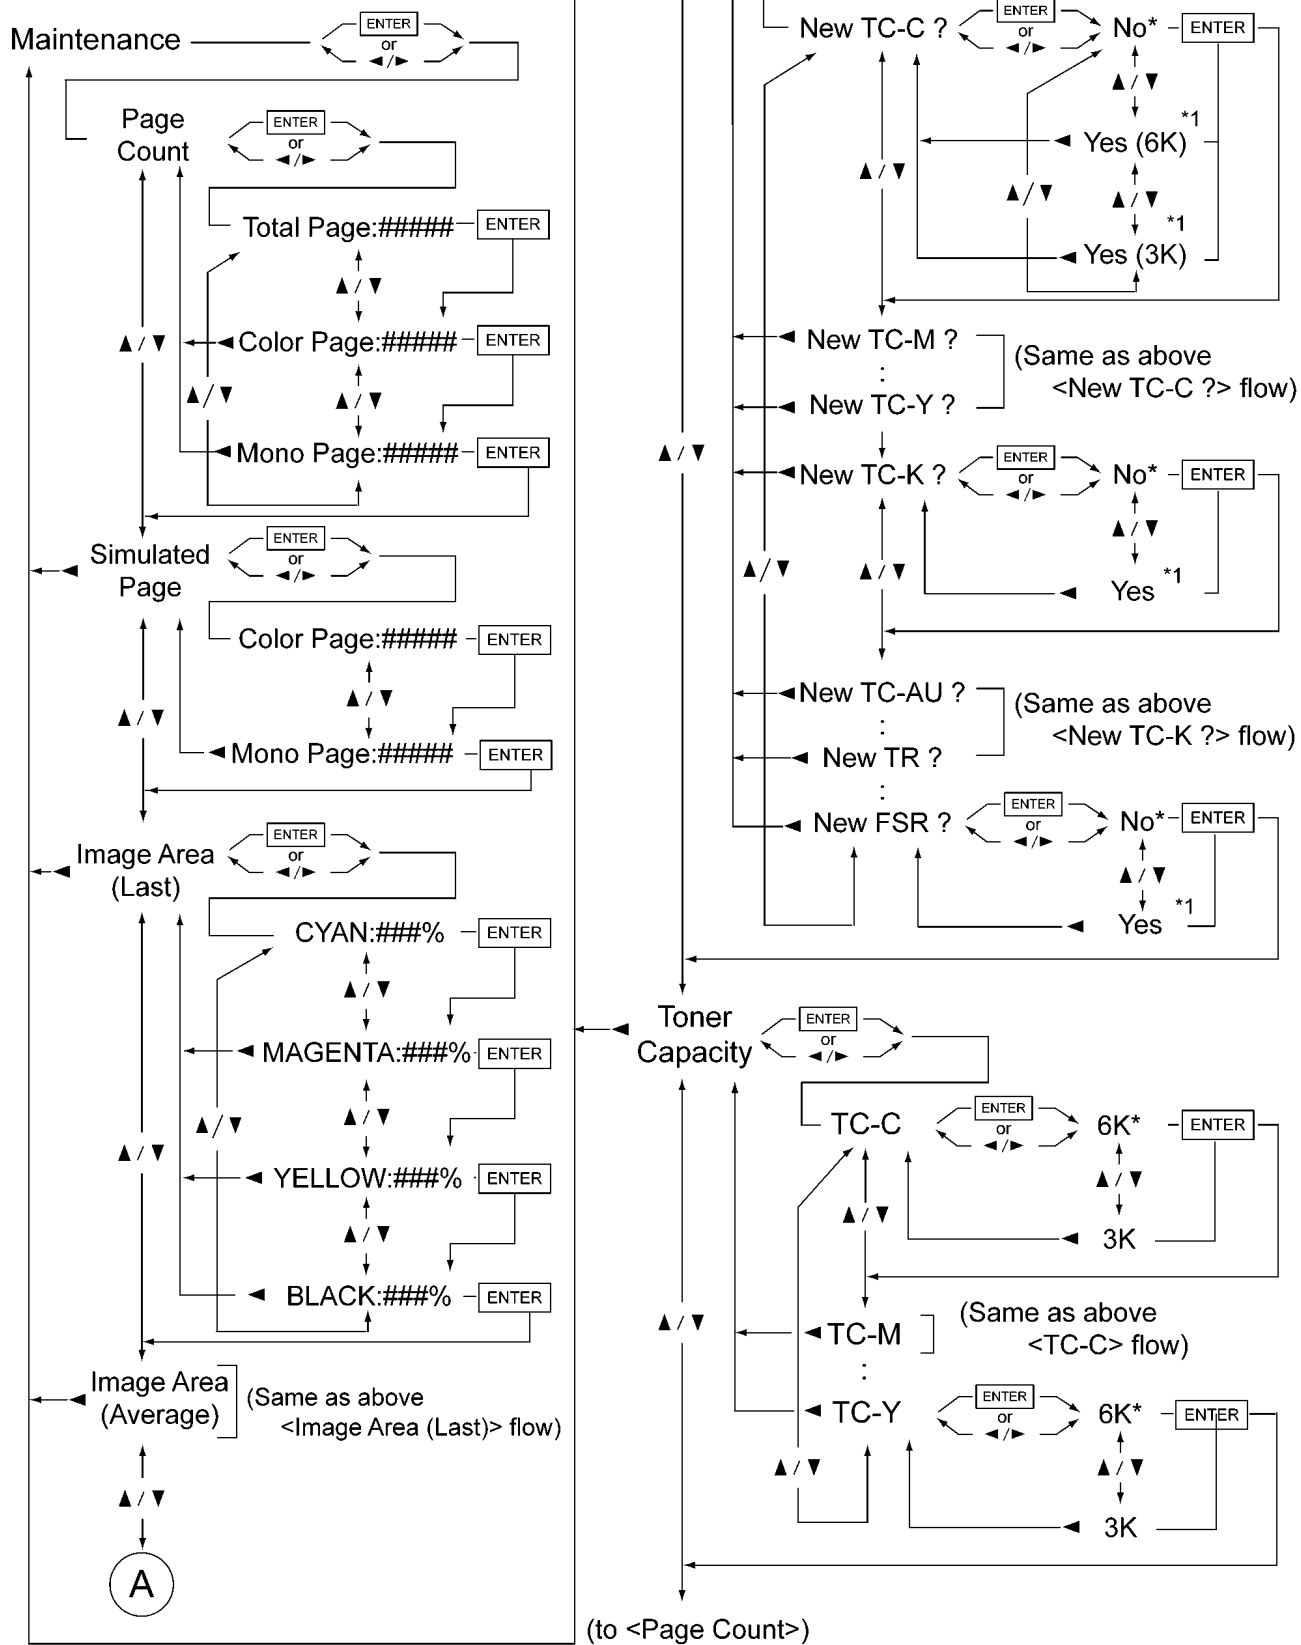

4.8. Maintenance Item Menu

⑥ Maintenance Item Menu

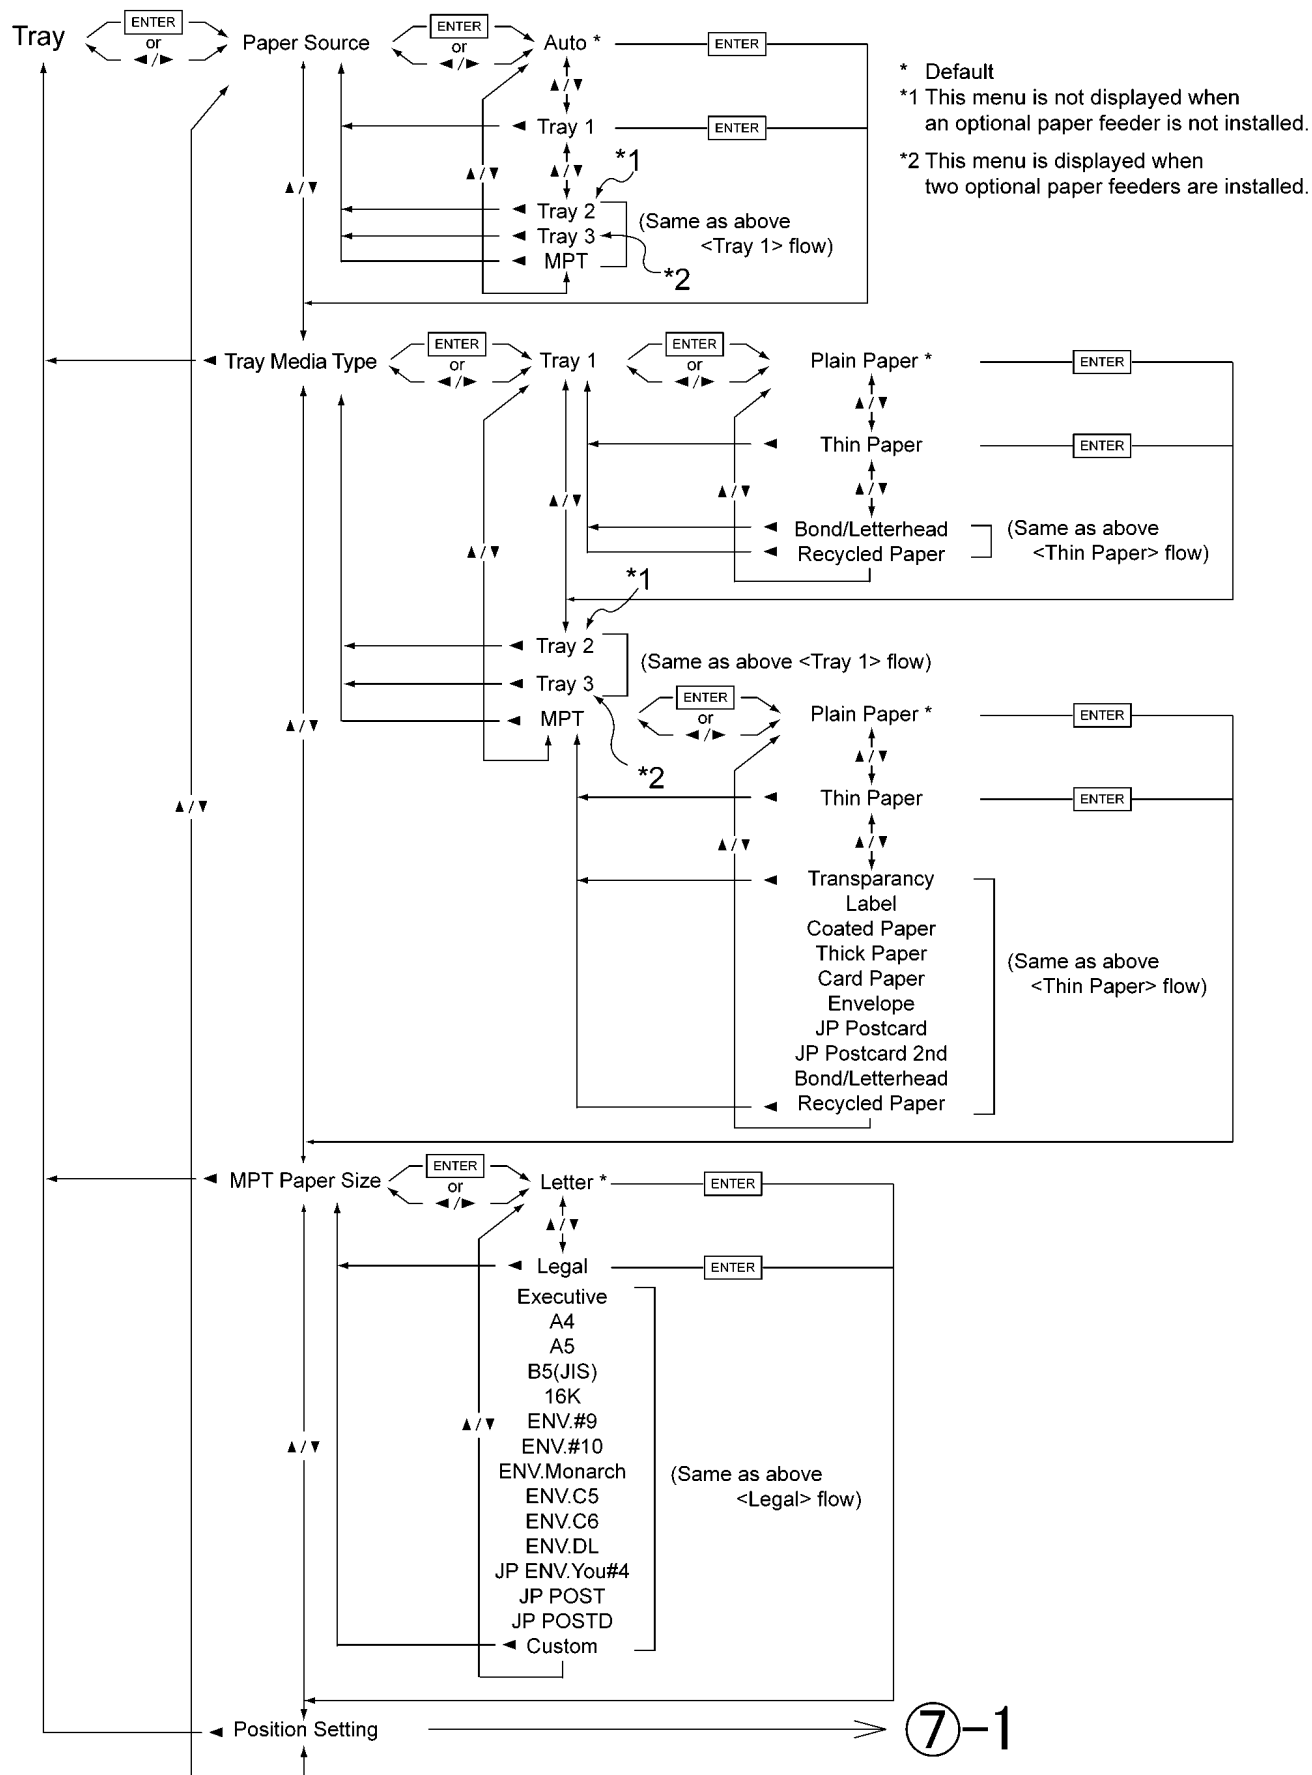

*: Default

*1: When pressing the Enter button, the Reset is performed.

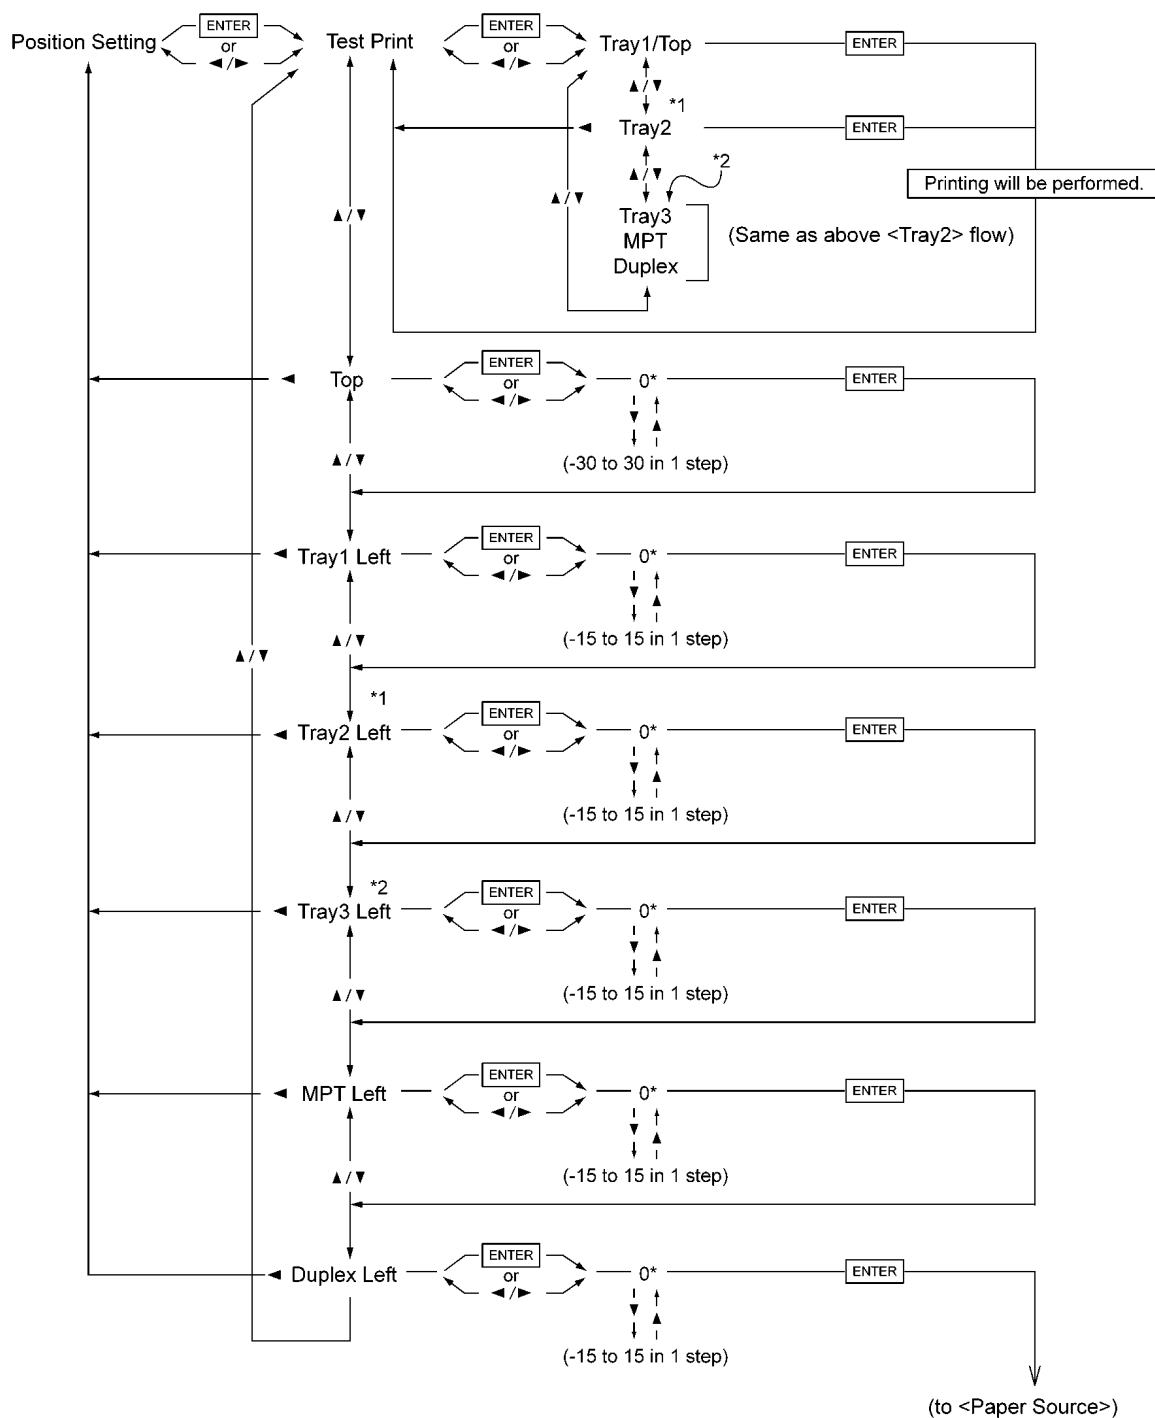

4.9. Tray Item Menu

⑦ Tray Item Menu

5 HDD Maintenance Mode Operation

5.1. HDD Maintenance Mode Operation

The HDD Maintenance mode has the following functions:

1. Displaying information of printer's hard disk drive
 - Volume Label
 - Total Size
 - Free Size
2. Checking the printer's hard disk drive
3. Formatting the printer's hard disk drive
 - Quick Format: Bad sectors are not checked.
 - HDD Format (Physical Format): It will take more time than the Quick Format because bad sectors are checked.
 - HDD Deletion:
This feature is used for disposing of a printer's hard disk drive for security purposes. All sectors of the hard disk drive will be initialized. (It will take about 2 hours for 40 GB HDD.)

The HDD Maintenance Mode is entered by turning on the power while pressing the **Continue** button until "Initializing..." is displayed.

5.2. HDD Maintenance Mode Menu Table

The following table is shown when a hard disk drive is installed. If it is not installed, "HDD is not Installed" is displayed on the LCD Panel.

Main Menu	Item Menu	Selection 1 Menu	Selection 2 Menu	Description

6 Service Mode Operation

6.1. Service Mode Control Panel Operation

6.1.1. How to enter the Service Mode

To enter the "Service Mode", turn on the power while pressing the  and  buttons at the same time, and keep the pressing the  and  buttons until "Initializing" is displayed. The Service Mode will be activated. The Service Mode is accessible when the Power Save is off. After warming up, "Service Mode" is displayed in the LCD. This service mode is canceled by turning off the printer. The printer has a two-line, 40 character LCD (2 x 20 characters). The menus in the following Service Mode flowchart (sections 6.3 ~ 6.15) are displayed in the lower line.

6.1.2. How to print the Network Configuration Report

Turn on the power while pressing the Enter button and keep the pressing the Enter button until "Initializing..." is displayed. The Network Configuration Report will be printed. When completing the printing the Network Configuration Report, the printer's LCD will display "Ready". The printing examples are indicated in the section 6.16 "Printing Network Configuration Report".

6.2. Service Mode Menu Table

* : Default

*1 This menu is displayed when an optional paper feeder is installed.

*2 This menu is displayed when two optional paper feeder are installed.

Main Menu	Item Menu	Selection 1 Menu	Selection 2 Menu	Description

		Toner Sply Engage	---	The toner supply solenoid in the toner cartridge holder is turned on for approx. 1 sec.
	Regist Clutch Test	Regist Clutch	---	The registration clutch in the paper feed unit is turned on for approx. 2.5 sec.
	Motor Test	MPT Pick MTR (100)	---	The paper pickup motor is turned on for approx. 1.5 sec at the process speed 100 mm/s (printing speed is 18 pages/min. [Letter/Simplex]).
		MPT Pick MTR (124)	---	The paper pickup motor is turned on for approx. 1.5 sec at the process speed 124 mm/s (printing speed is 22 pages/min. [Letter/Simplex]).
		MPT Pick MTR (50)	---	The paper pickup motor is turned on for approx. 1.5 sec at the process speed 50 mm/s (printing speed is 9.5 pages/min. [Letter/Simplex]).
		PC(K)/AU MTR (100)	---	The BK drive motor is turned on for approx. 1.5 sec at the process speed 100 mm/s (printing speed is 18 pages/min. [Letter/Simplex]). See Cautions 1 and 2.
		PC(K)/AU MTR (124)	---	The BK drive motor is turned on for approx. 1.5 sec at the process speed 124 mm/s (printing speed is 22 pages/min. [Letter/Simplex]). See Cautions 1 and 2.
		PC(K)/AU MTR (50)	---	The BK drive motor is turned on for approx. 1.5 sec at the process speed 50 mm/s (printing speed is 9.5 pages/min. [Letter/Simplex]). See Cautions 1 and 2.
		PC(CLR) MTR (100)	---	The CMY drive motor is turned on for approx. 1.5 sec at the process speed 100 mm/s (printing speed is 18 pages/min. [Letter/Simplex]). See Cautions 1 and 2.
		PC(CLR) MTR (124)	---	The CMY drive motor is turned on for approx. 1.5 sec at the process speed 124 mm/s (printing speed is 22 pages/min. [Letter/Simplex]). See Cautions 1 and 2.
		PC(CLR) MTR (50)	---	The CMY drive motor is turned on for approx. 1.5 sec at the process speed 50 mm/s (printing speed is 9.5 pages/min. [Letter/Simplex]). See Cautions 1 and 2.

Caution 1 :

Before performing this test, install all following units or remove all following units to avoid the toner clogging in the accumulator unit and print cartridge units.

1. All print cartridges (Black and CMY)
2. Accumulator Unit
3. Waste Toner Cartridge

Caution 2 :

When performing this test while opening the right cover, lift up the waste toner cartridge to the upper position, or the waste toner will be dispersed.

Main Menu	Item Menu	Selection 1 Menu	Selection 2 Menu	Description
Engine Test	Motor Test	Tray2 Feed MTR (100)	---	The paper feed motor in the 2nd feeder is turned on for approx. 1.5 sec at the process speed 100 mm/s (printing speed is 18 pages/min. [Letter/Simplex]).
		Tray2 Feed MTR (124)	---	The paper feed motor in the 2nd feeder is turned on for approx. 1.5 sec at the process speed 124 mm/s (printing speed is 22 pages/min. [Letter/Simplex]).
		Tray2 Feed MTR (50)	---	The paper feed motor in the 2nd feeder is turned on for approx. 1.5 sec at the process speed 50 mm/s (printing speed is 9.5 pages/min. [Letter/Simplex]).
		Tray3 Feed MTR (100)	---	The paper feed motor in the 3rd feeder is turned on for approx. 1.5 sec at the process speed 100 mm/s (printing speed is 18 pages/min. [Letter/Simplex]).
		Tray3 Feed MTR (124)	---	The paper feed motor in the 3rd feeder is turned on for approx. 1.5 sec at the process speed 124 mm/s (printing speed is 22 pages/min. [Letter/Simplex]).
		Tray3 Feed MTR (50)	---	The paper feed motor in the 3rd feeder is turned on for approx. 1.5 sec at the process speed 50 mm/s (printing speed is 9.5 pages/min. [Letter/Simplex]).
	Paper Detect Sensor	Tray1 Paper Sensor	---	The paper empty sensor in the paper feed unit is checked. When detecting the paper, "Sensor : Detected" is displayed. When detecting no paper, "Sensor : No Paper" is displayed.
		Registration Sensor	---	The registration sensor in the paper feed unit is checked. When detecting the paper, "Sensor : Detected" is displayed. When detecting no paper, "Sensor : No Paper" is displayed.
		MPT Paper Sensor	---	The MPT paper detection sensor in the paper feed unit is checked. When detecting the paper, "Sensor : Detected" is displayed. When detecting no paper, "Sensor : No Paper" is displayed.
		Tray2 Paper Sensor	---	The paper empty sensor in the 2nd feeder unit is checked. See Note.
		Tray2 Jam Sensor	---	The paper jam sensor in the 2nd feeder unit is checked. See Note.
		Tray3 Paper Sensor	---	The paper empty sensor in the 3rd feeder unit is checked. See Note.
		Tray3 Jam Sensor	---	The paper jam sensor in the 3rd feeder unit is checked. When detecting the paper, "Sensor : Detected" is displayed. When detecting no paper, "Sensor : No Paper" is displayed. When the 3rd Feeder is not installed, "No Paper" is displayed.

Note:

When detecting the paper, "Sensor : Detected" is displayed. When detecting no paper, "Sensor : No Paper" is displayed.
When the 2nd (3rd) Feeder is not installed, "No Paper" is displayed.

*: Default

Main Menu	Item Menu	Selection 1 Menu	Selection 2 Menu	Description
Engine Test	Paper Detect Sensor	Exit Full Sensor	---	The paper full sensor in the paper exit block is checked. When the paper tray is full, "Sensor : Full" is displayed. When the paper tray is not full, "Sensor : Not Full" is displayed.
		ADU Jam Sensor	---	The ADU jam detection sensor in the paper exit block is checked. When detecting the paper, "Sensor : Detected" is displayed. When detecting no paper, "Sensor : No Paper" is displayed.
		Fuser Exit Sensor	---	The paper ejection sensor in the fuser unit is checked. When detecting the paper, "Sensor : Detected" is displayed. When detecting no paper, "Sensor : No Paper" is displayed.
	Cassette Sensor	Tray1 Cassette	---	The paper size detection switches are checked. One of "Sensor : No Cassette", "Sensor : A4", "Sensor : Letter", "Sensor : Legal" and "Sensor: B5 (JIS)" is displayed.
		Tray2 Cassette	---	The paper size detection switches in the 2nd feeder are checked. One of "Sensor : No Cassette", "Sensor : A4", "Sensor : Letter", "Sensor : Legal" and "Sensor: B5 (JIS)" is displayed.
		Tray3 Cassette	---	The paper size detection switches in the 3rd feeder are checked. One of "Sensor : No Cassette", "Sensor : A4", "Sensor : Letter", "Sensor : Legal" and "Sensor: B5 (JIS)" is displayed.
	Temp&Humidity Sensor	Fusing Temp (1)	---	The temperature on the center surface of the fuser belt is displayed.
		Fusing Temp (2)	---	The temperature on the right side surface of the fuser belt is displayed.
		Fusing Temp (3)	---	The temperature of the pressure belt is displayed.
		Temperature Sensor	---	The internal temperature of the printer is displayed.
		Humidity Sensor	---	The internal humidity of the printer is displayed.
	WTC & Toner Sensor	WTC Full Sensor	---	The waste toner cartridge full sensor is checked. When the waste toner is full, "Sensor : Full" is displayed. When the waste toner is not full, "Sensor : Not Full" is displayed.
		Toner Emp. Sensor (C)	---	The toner empty sensor (C, M, Y, K) is checked. When detecting the toner, "Sensor : Detected" is displayed. When detecting no toner, "Sensor : Empty" is displayed.
		Toner Emp. Sensor (M)		
		Toner Emp. Sensor (Y)		
		Toner Emp. Sensor (K)		

Main Menu	Item Menu	Sub Menu 1	Sub Menu 2	Description
Engine Test	WTC & Toner Sensor	AU/WTC Sensor	---	The WTC/AU sensor is checked. When detecting the accumulator unit and waste toner cartridge, "Sensor : Detected" is displayed. When detecting no accumulator unit and no waste toner cartridge, "Sensor : No AU and WTC" is displayed.
	Door Sensor	Font/Side Door	---	The front/right door open detection switch is checked. When the front door, right cover or both doors is/are opened, "Sensor : Door Open" is displayed. When the door(s) is/are closed, "Sensor : Door Close" is displayed.
		Toner Door	---	The toner cartridge access cover detection switch is checked. When the toner cartridge access cover is opened, "Sensor : Door Open" is displayed. When the toner cartridge access cover is closed, "Sensor : Door Close" is displayed.
	Other Sensor	MPT Home Position	---	The MPT home position sensor is checked. When the MPT pickup roller is at home position, "Sensor : Home" is displayed. When the MPT pickup roller is not at home position, "Sensor : Not Home" is displayed.
		Fuser Rotation	---	The fuser roller rotation sensor in the fuser unit is checked. When the fuser roller is rotating, "Sensor : Rotating" is displayed. When the fuser roller is not stopped, "Sensor : Not Rotating" is displayed.
		Color Missreg. (1)	---	The value of color registration sensor (1) is displayed.
		Color Missreg. (2)	---	The value of color registration sensor (2) is displayed.
		Duplex Unit Sensor	---	The ADU Detection Sensor Switch is checked. When the ADU (automatic duplex unit) is installed, "Sensor : Detected" is displayed. When the ADU is not installed, "Sensor : No Unit" is displayed.
		PC(K) Sens.Output	---	The output voltage of black print cartridge virgin sensor is displayed.
		PC(CLR) Sens.Output	---	The output voltage of color print cartridge virgin sensor is displayed.
Color Correction	Mis-Reg.Tbl Reset	No *	---	No reset the color compensation table.
		Yes	---	Reset the color compensation table.
	Skew Correction Set	On *	---	The skew correction mode is active.
		Off	---	The skew correction mode is inactive.
Flag Setting	Set Toner Supply	No *	---	The printer are not replenished with toner even if you turn it on.
		Yes	---	When turning on the printer, it will take up to 5 minutes to fill the printer with toner

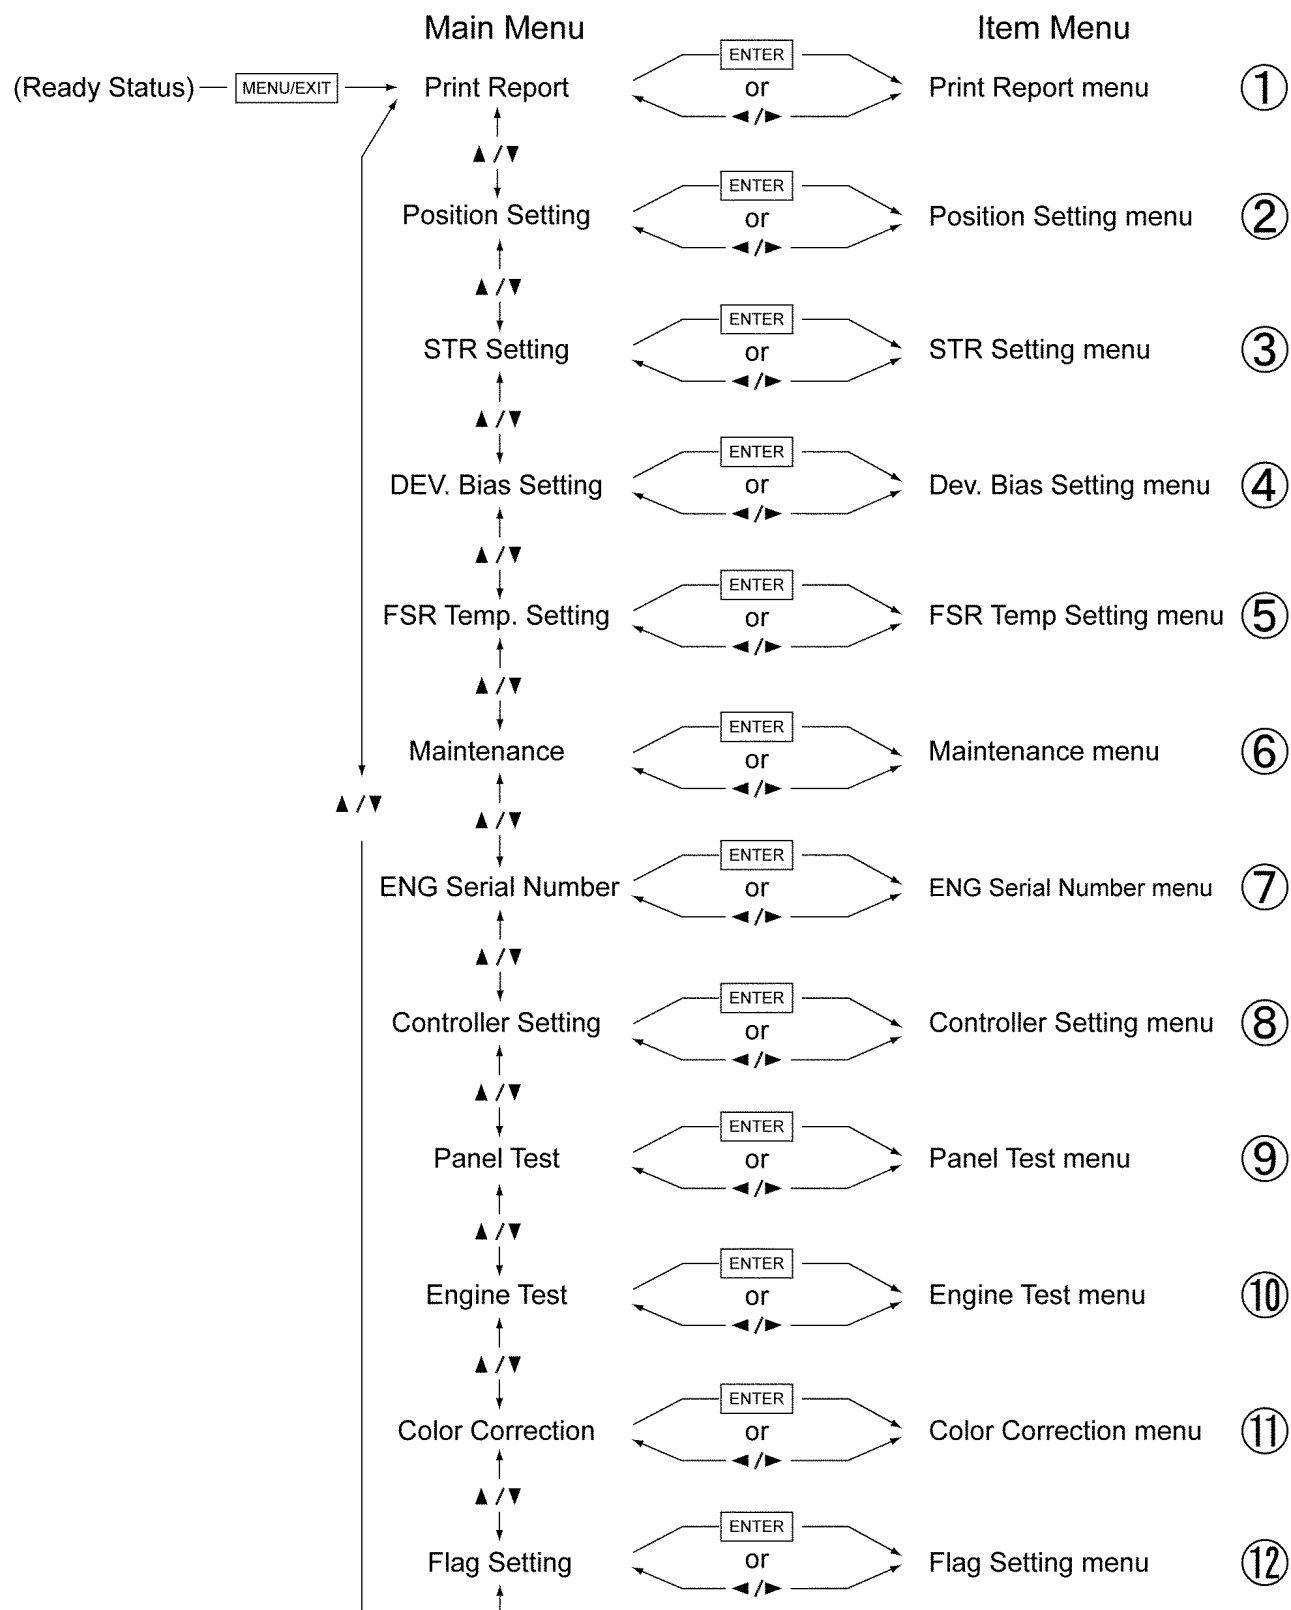

6.3. Service Main Menu

MENU/EXIT : Press the Menu/Exit
Pause  button.

ENTER : Press the Enter
 button.

▲/▼ : Press the  or  button.

◀/▶ : Press the  or  button.

6.4. Print Report Item Menu

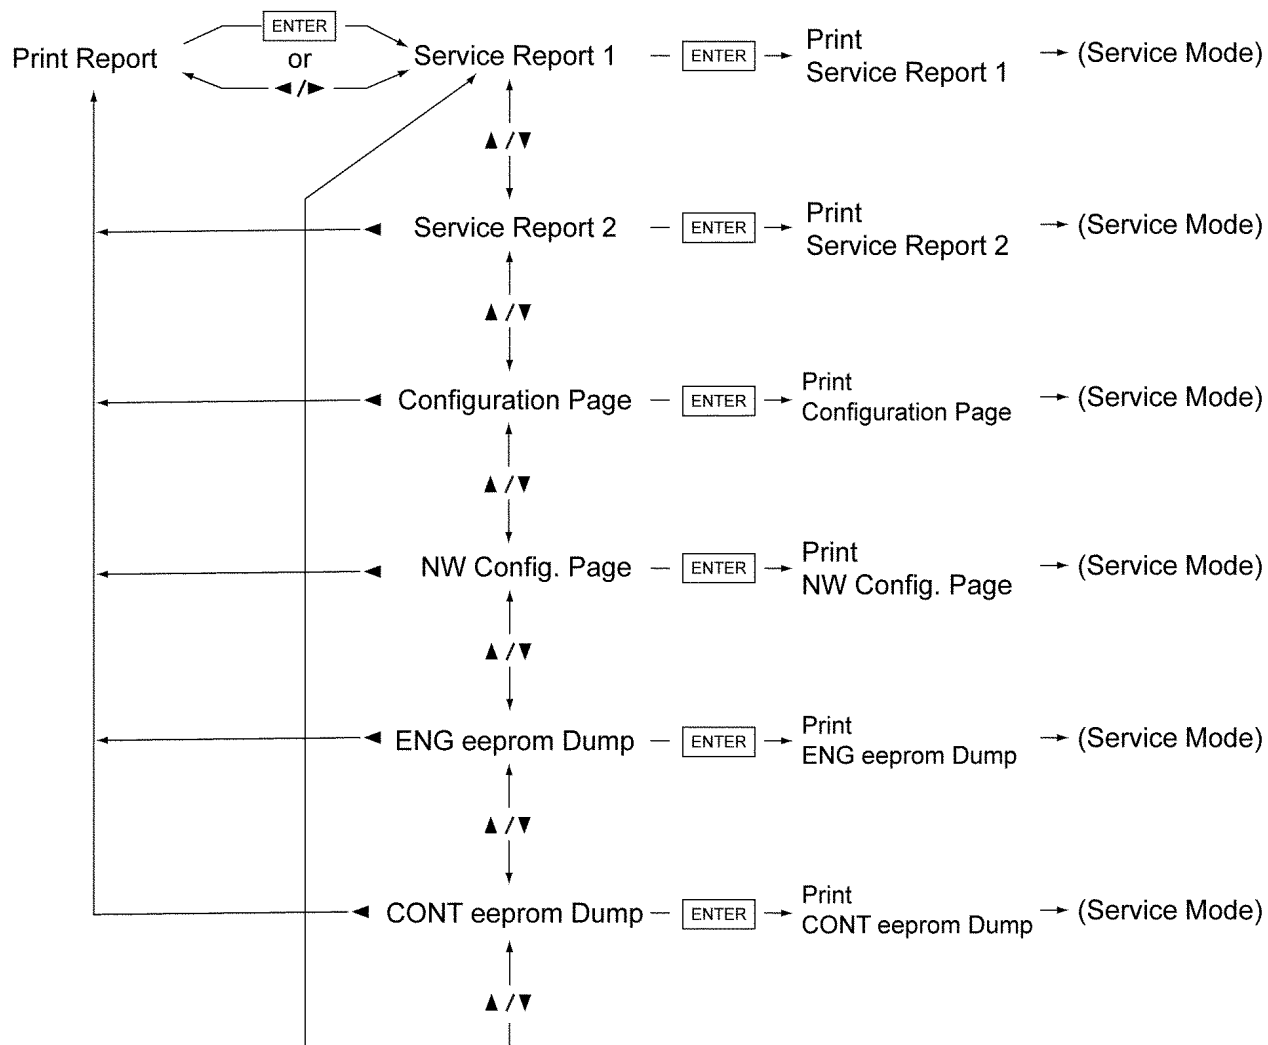

Menu Name	Description
Service Report 1	Information regarding JAMs, Service Error Log, etc. is printed.
Service Report 2	Information regarding the life count values of consumables and basic setting of engine is printed.
Configuration Page	General information regarding printer settings or configuration is printed.
NW Config. Page	General information regarding the basic setting regarding network configuration is printed.
ENG eeprom Dump	Hex Dump of the engine board EEPROM is printed.
CONT eeprom Dump	Hex Dump of the main control board EEPROM is printed.

① Print Report Item Menu

ENTER : Press the  button.

 : Press the  button.

 /  : Press the  or  button.  : Press the  or  button.

6.4.1. Printing Example of Service Report 1

The following is an example of what is printed when performing the "Service Report 1" menu.

Service Report 1
Printer Name :DP-CL22

Page:1
-M

Service Error Log(Maximum Number of Entries :5)

- 1: Service Error Log is empty
- 2: Service Error Log is empty
- 3: Service Error Log is empty
- 4: Service Error Log is empty
- 5: Service Error Log is empty

JAM Error Log(Maximum Number of Entries :4)

- 1: JAM Error Log is empty
- 2: JAM Error Log is empty
- 3: JAM Error Log is empty
- 4: JAM Error Log is empty

Cause of JAM Count

	Num of Times
JAM 1 (From Tray1)	0

6.5. Position Setting Item Menu

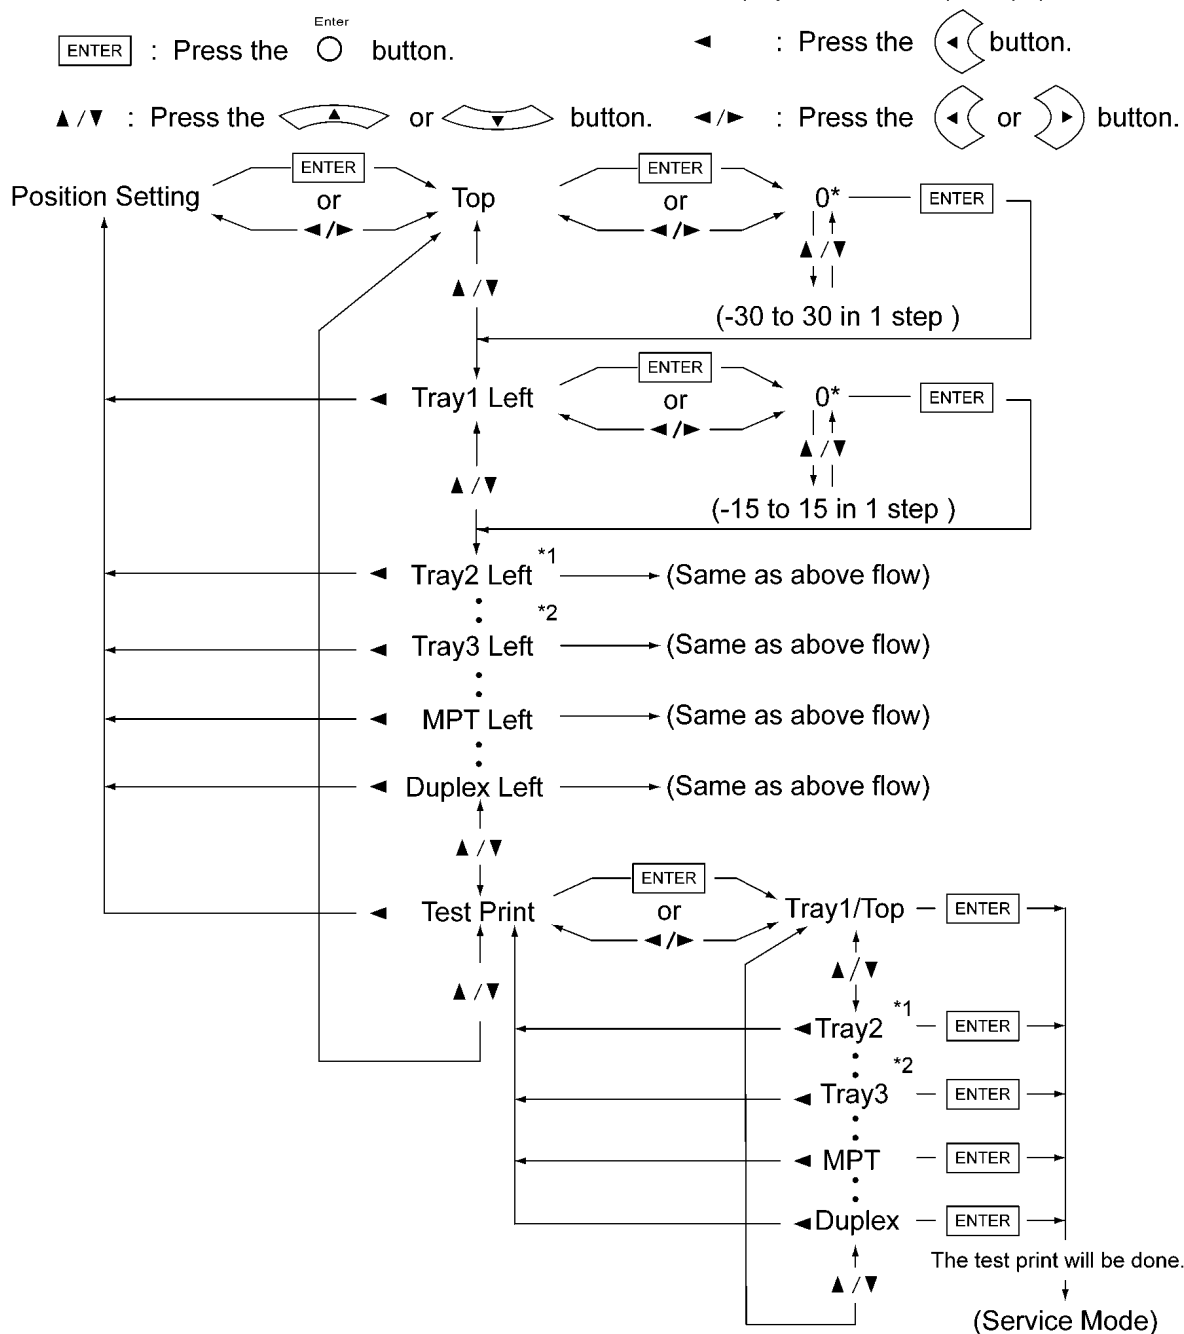

Menu Name	Description
Top	This mode is used to adjust the top print position, primarily when moving the printer, installing the optional paper feeder, replacing the laser scanning unit or replacing the engine board.
Tray 1 Left	This mode is used to adjust the left print position of the printed media loaded in the Tray 1, primarily when moving the printer, installing the optional paper feeder, replacing the laser scanning unit or replacing the engine board.
Tray 2 Left	This mode is used to adjust the left print position of the printed media loaded in the Tray 2, primarily when moving the printer, installing the optional paper feeder, replacing the laser scanning unit or replacing the engine board.
Tray 3 Left	This mode is used to adjust the left print position of the printed media loaded in the Tray 3, primarily when moving the printer, installing the optional paper feeder, replacing the laser scanning unit or replacing the engine board.
MPT Left	This mode is used to adjust the left print position of the printed media loaded in the multi-purpose tray, primarily when moving the printer, installing the optional paper feeder, replacing the laser scanning unit or replacing the engine board.
Duplex Left	This mode is used to adjust the left print position of the printed media on the back the page, primarily when moving the printer, installing the optional paper feeder, replacing the laser scanning unit or replacing the engine board.
Test Print	The lines to check the top, left and back side left print positions are printed.

② Position Setting Item Menu

* : Default

*1: This menu is displayed when an optional paper feeder is installed.

*2: This menu is displayed when two optional paper feeders are installed.

6.6. STR Setting Item Menu

The following service menus are used to adjust the toner density for each media (Plain, Thin Paper, Transparency, Label, Coated Paper, Thick Paper, Card Stock, Envelope, JP Postcard and JP Postcard 2nd).

③ STR Setting Item Menu

 : Press the  button.

▲/▼ : Press the  or  button.

◀ : Press the  button.

* : Default

◀/▶ : Press the  or  button.

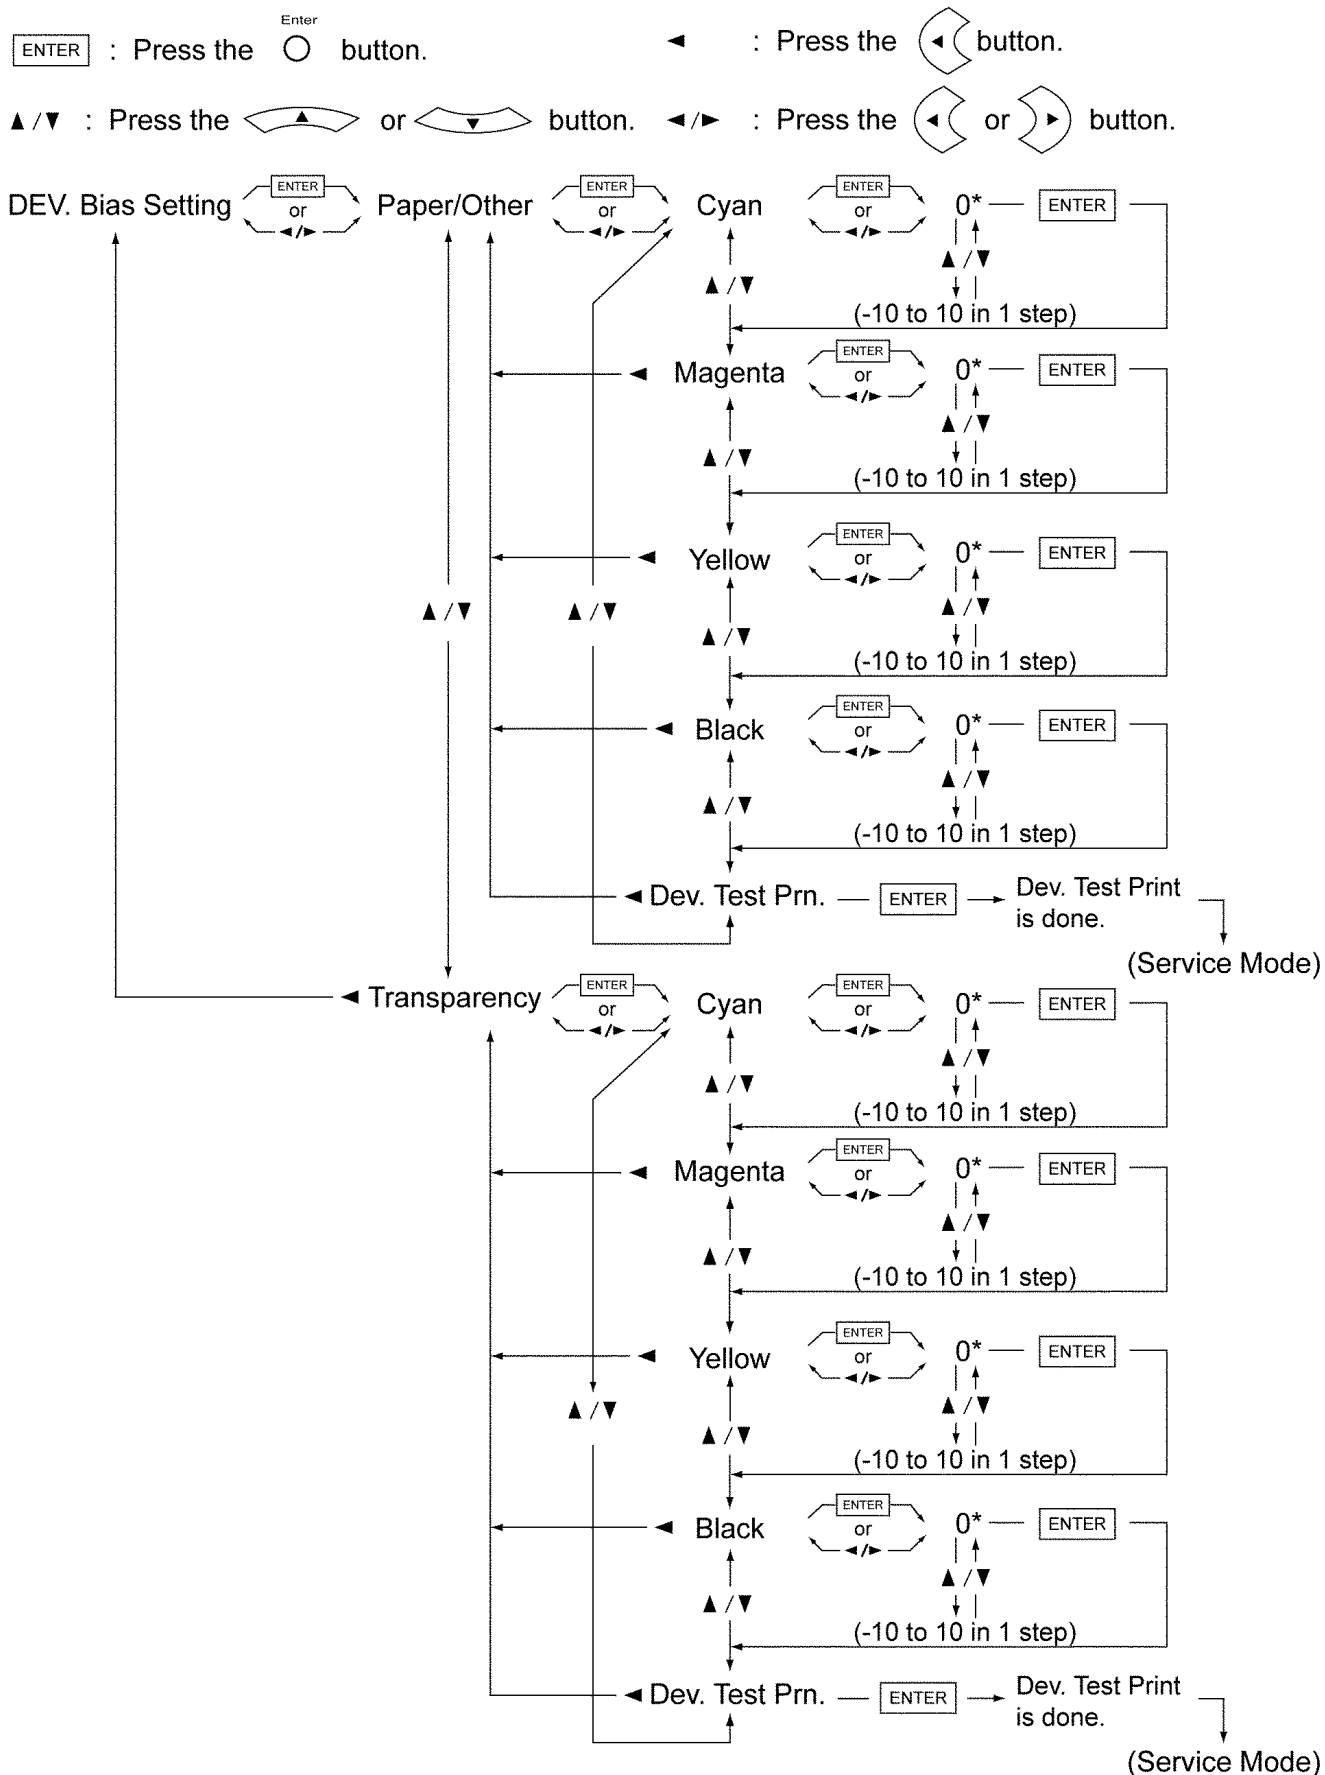

6.7. DEV. Bias Item Menu

The following service menus are used to adjust the toner density for all color toner (Cyan, Magenta, Yellow, Black).

④ DEV. Bias Item Menu

* : Default

6.8. FSR Temp. Setting Item Menu

The following service menus are used to adjust the fusing temperature for each media (Plain, Thin, Transparency, Label, Coated Paper, Thick, Card, Envelope, JP Postcard and JP Postcard 2nd.)

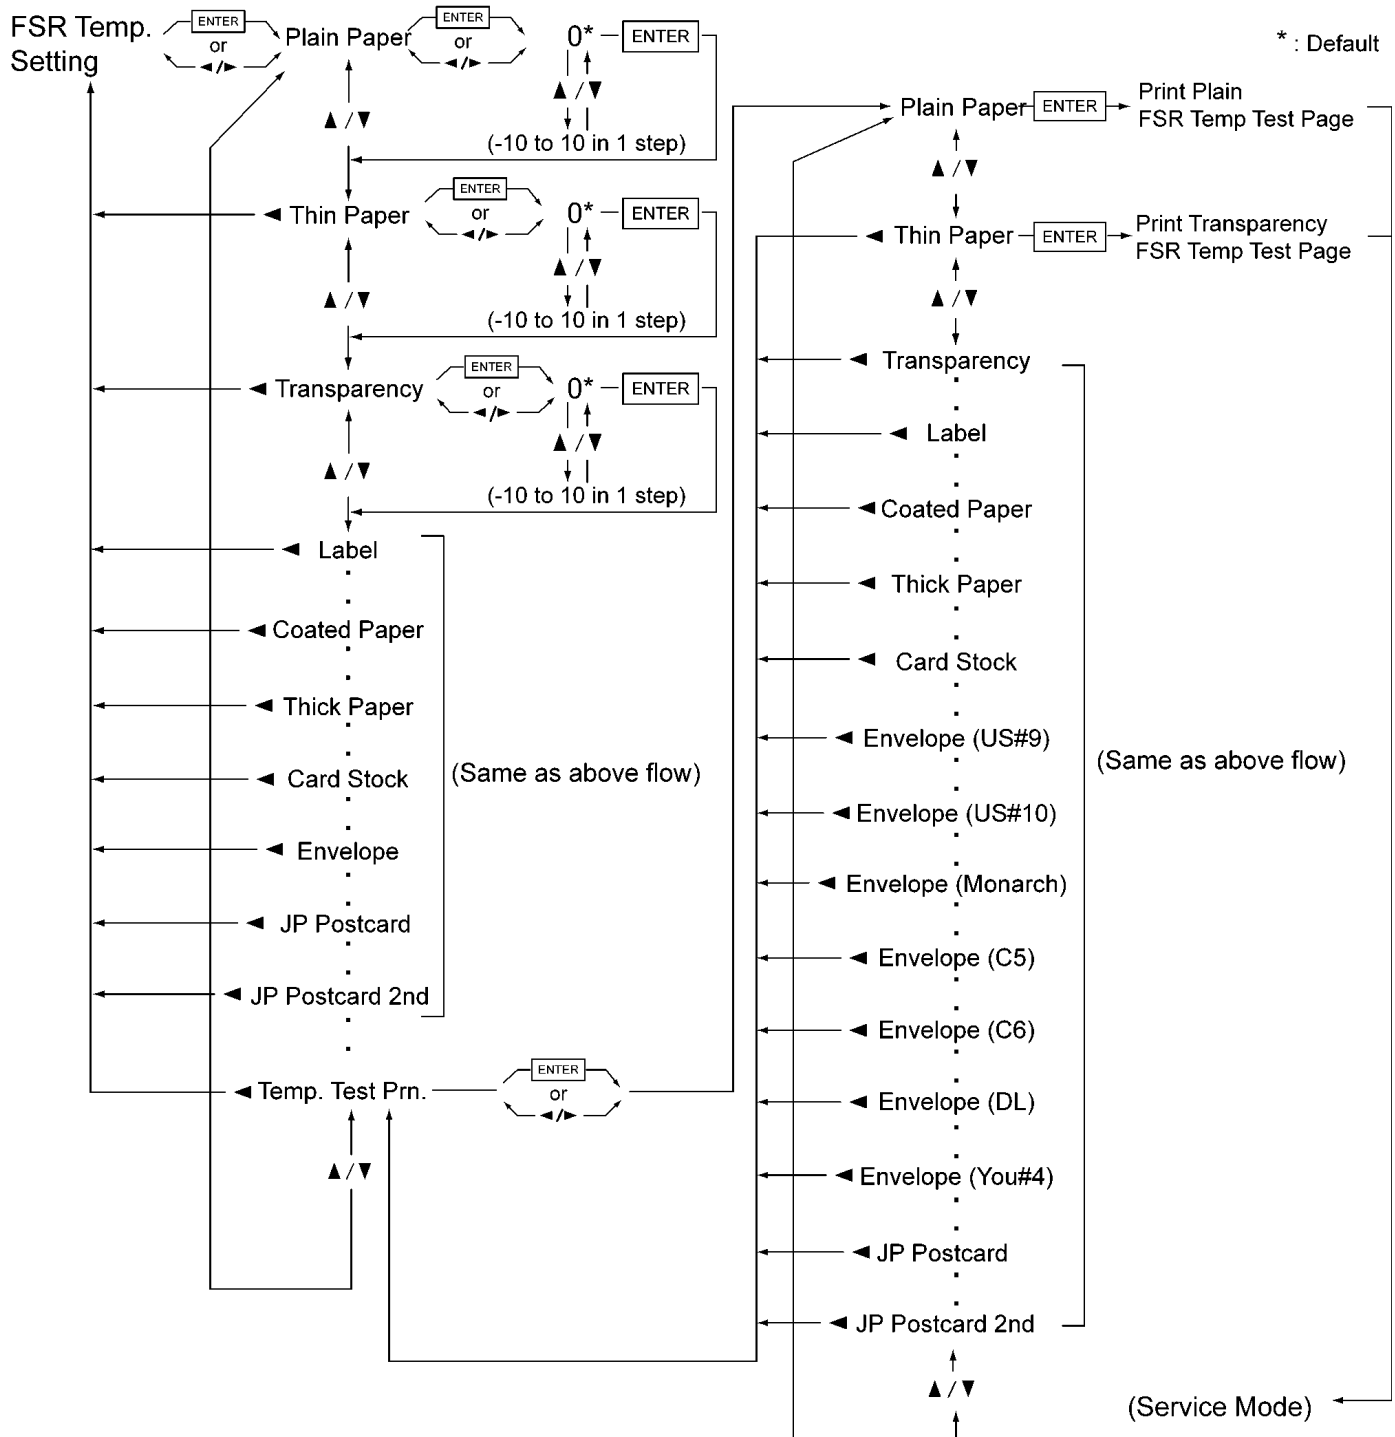

⑤ FSR Temp. Setting Item Menu

ENTER : Press the  button.

▲/▼ : Press the  or  button.

◀ : Press the  button.

◀/▶ : Press the  or  button.

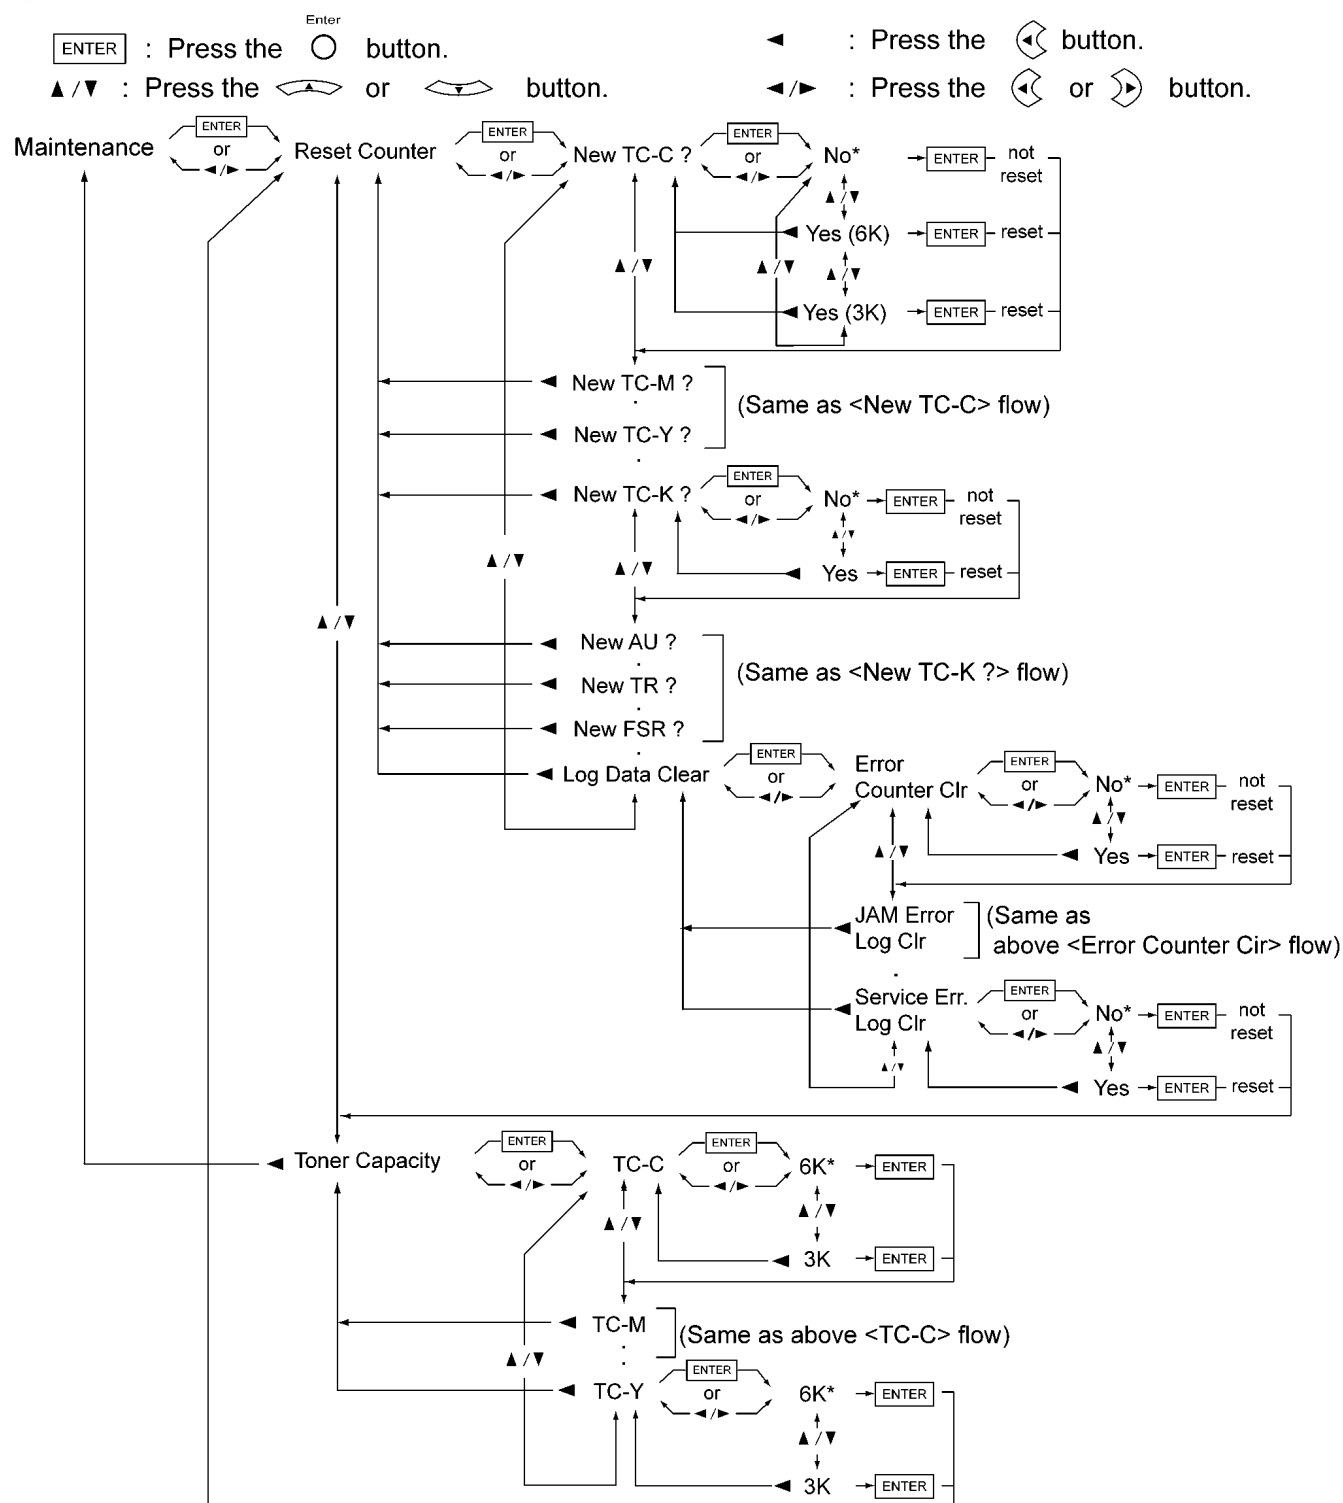

6.9. Maintenance Item Menu

Menu Name	Description
New TC-C?	Cyan Toner Cartridge counter is reset.
New TC-M?	Magenta Toner Cartridge counter is reset.
New TC-Y?	Yellow Toner Cartridge counter is reset.
New TC-K?	Black Toner Cartridge counter is reset.
New AU?	Accumulator Unit counter is reset.
New TR?	Second Transfer Roller counter is reset
New FSR?	Fuser Unit counter is reset.
Error Counter Clr	All counters, printed by the Print Report in the service mode, are reset.
JAM Error Log Clr	All JAM Error Logs, printed by the Print Report in the service mode, are reset.
Service Err.Log Clr	All Service Error Logs, printed by the Print Report in the service mode, are reset.

⑥ Maintenance Item Menu

*: Default

6.10. ENG Serial Number Item Menu

The Engine Serial Number (eleven figures) is input using this menu.

⑦ ENG Serial Number Menu

* : Default

ENTER : Press the  button.

 : Press the  or  button.

 : Press the  button.

 : Press the  button.

 : Press the  or  button.

 : Space

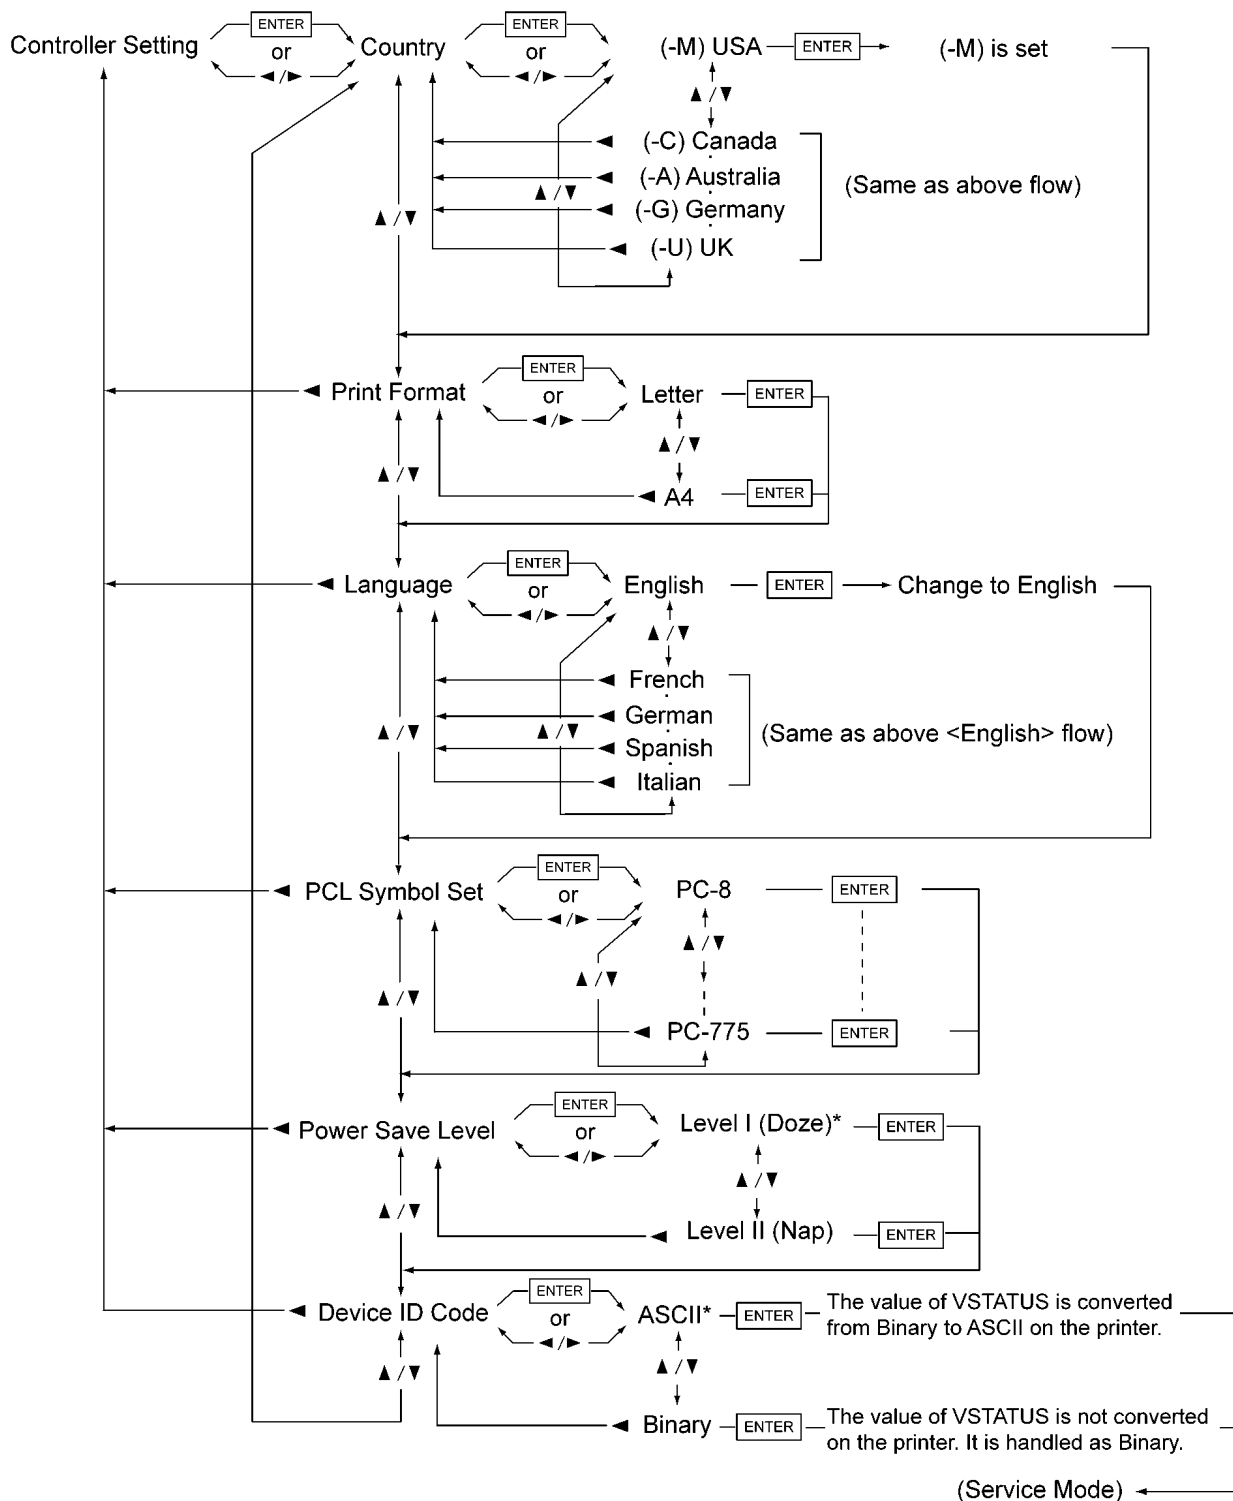

6.11. Controller Setting Item Menu

Menu Name	Description
Country	Application area/country is set.
Print Format	Default Paper Size is set.
Language	Default Language is set.
PCL Symbol Set	Default Symbol Set is set.
Power Save Level	Default Power Save Level is set.

⑧ Controller Setting Menu

ENTER : Press the  button. * : Default

▲/▼ : Press the  or  button. ◀/▶ : Press the  or  button.

6.12. Panel Test Item Menu

This menu is used to check the LCD. Select the “Panel Test” and press the Enter button. Confirm that the LCD messages/patterns shown in the following table are displayed.

Step No.	Press the following button	LCD Message/Pattern	Remarks
1	(Select the Panel Test menu by pressing the Enter or ► button.)		
2	ENTER		
3	ENTER	ON-OFF-OFF-OFF Push Down Key	Power LED is lit.
4	▼	OFF-ON-OFF-OFF Push Up Key	On Line LED is lit.
5	▲	OFF-OFF-ON-OFF Push Continue Key	Ready LED is lit.
6	►	OFF-OFF-OFF-ON Push Cancel Key	Error LED is lit.
7	◄	OFF-OFF-OFF-OFF Push Enter Key	All LEDs are turned off.
8	ENTER	Service Mode	

⑨ Panel Test Menu

* : Default

 : Press the ^{Enter}  button.

 : Press the  button.

6.13. Engine Test Item Menu

⑩ Engine Test Item Menu

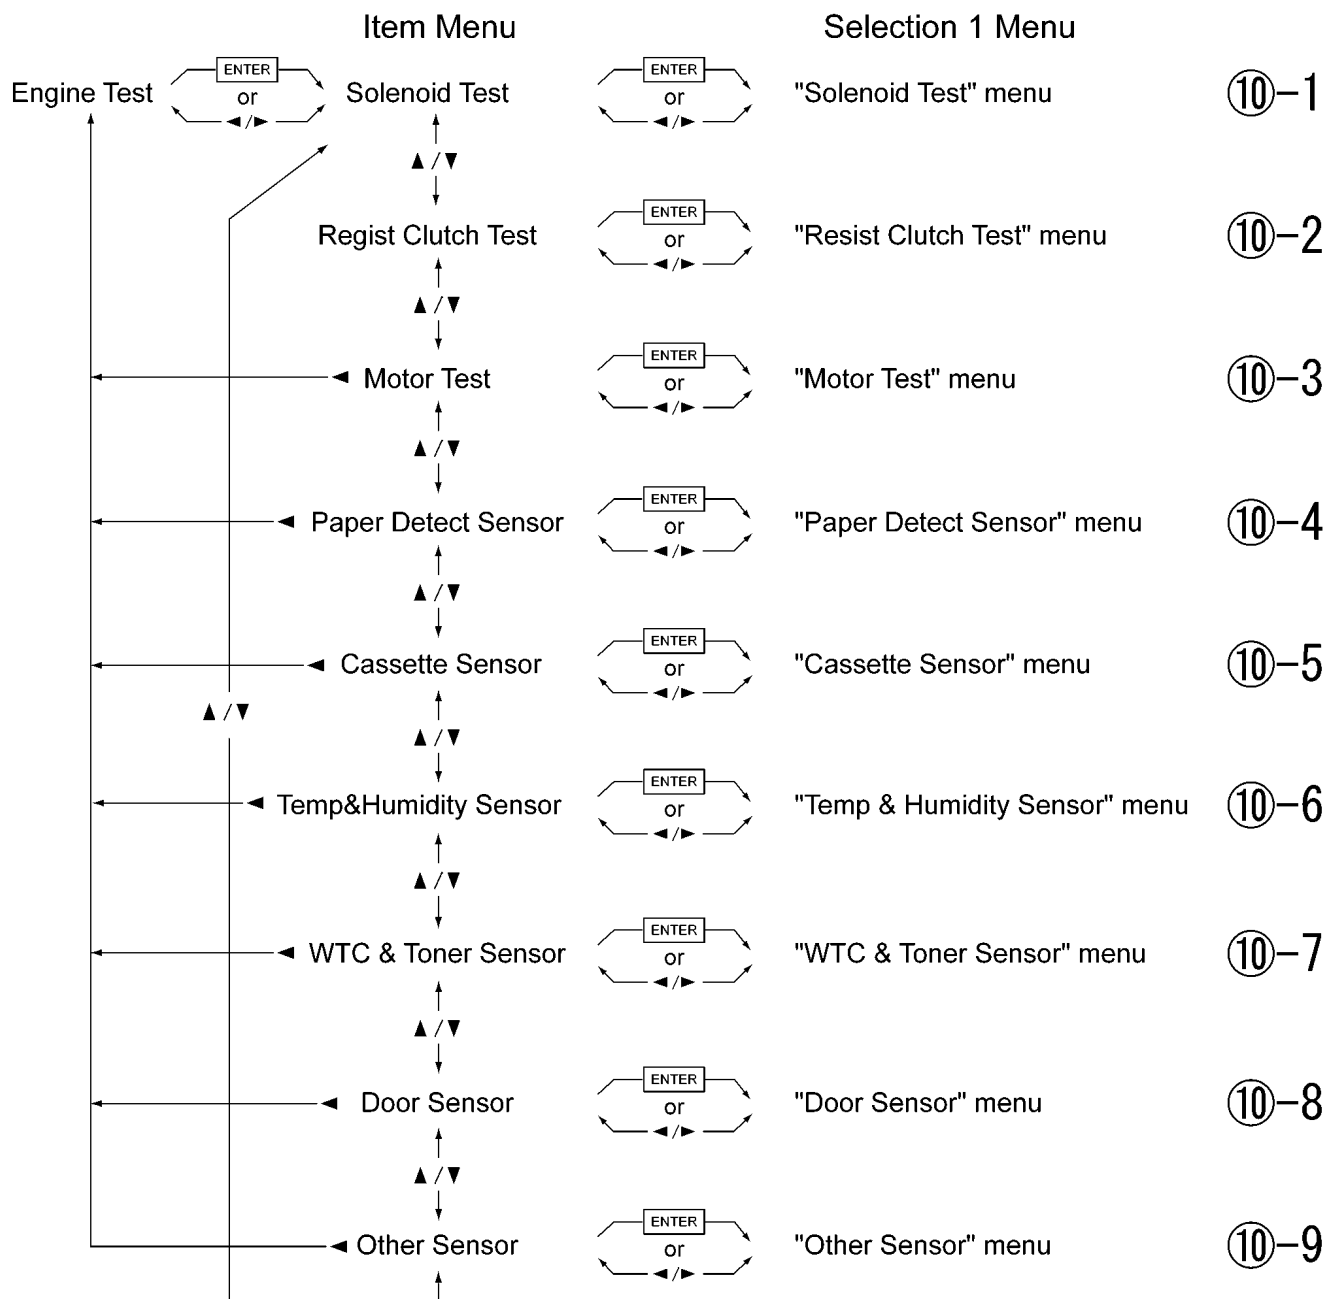

* : Default

ENTER : Press the  button.

 : Press the  button.

 /  : Press the  or  button.

 /  : Press the  or  button.

6.13.1. Solenoid TEST

⑩-1 Solenoid Test Item Menu

* : Default

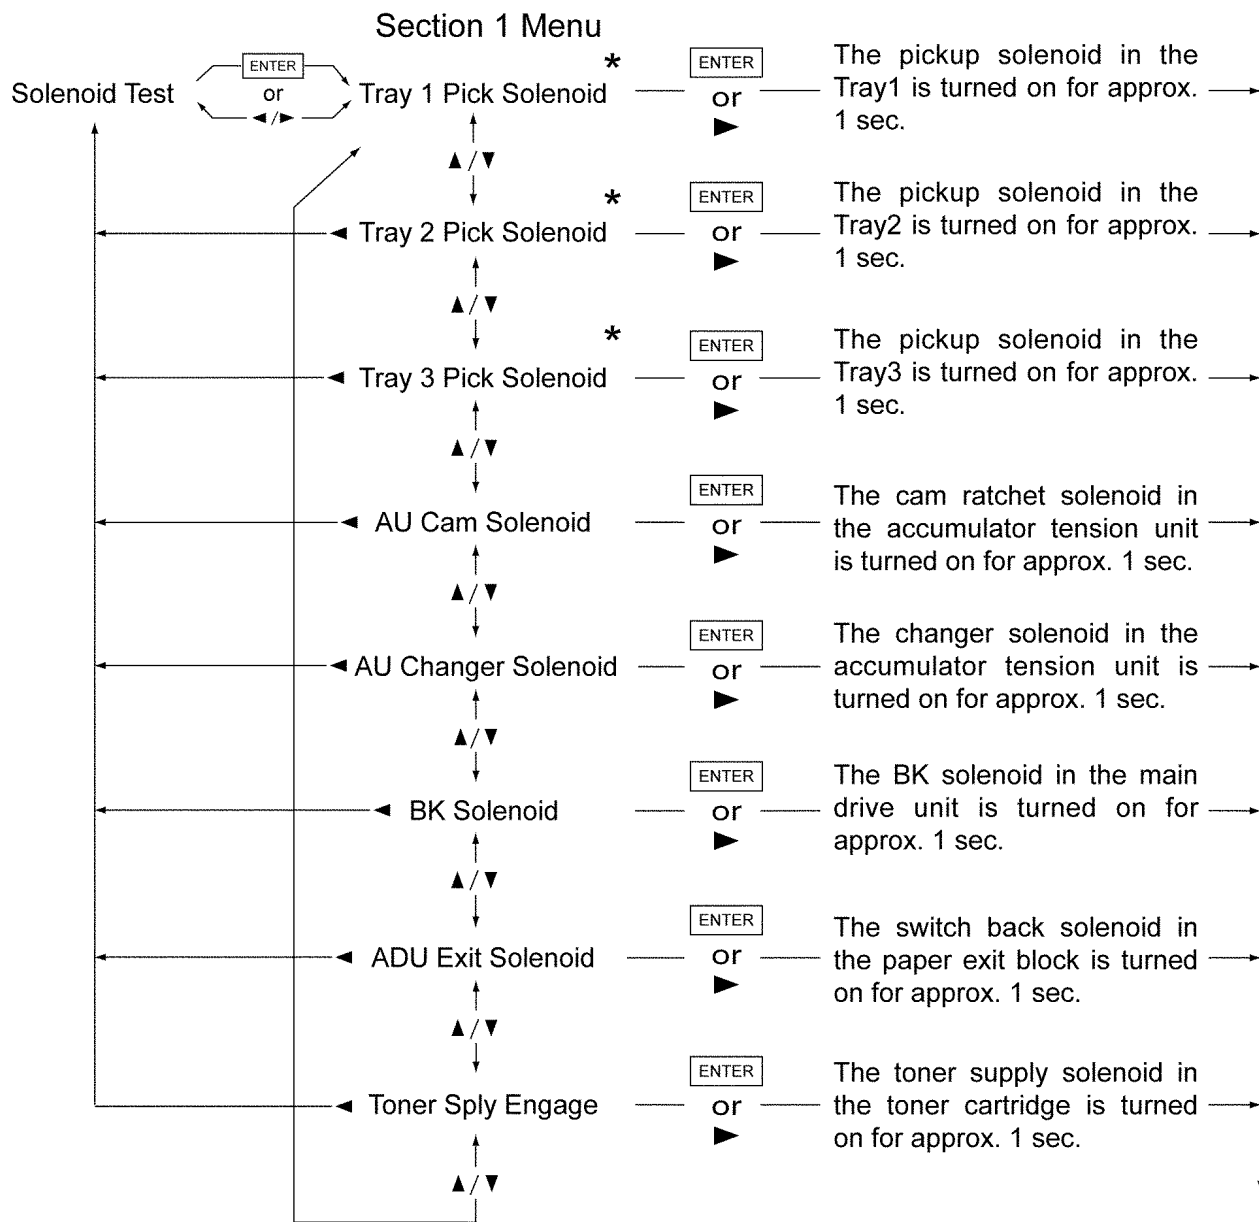

ENTER : Press the  button.

▲/▼ : Press the  or  button.

◀ : Press the  button.

◀/▶ : Press the  or  button.

▶ : Press the  button.

(Service Mode)

* Caution: Before performing this test, remove the paper supply tray.

6.13.2. Regist Clutch TEST

⑩-2 Regist Clutch Item Menu

ENTER : Press the ^{Enter}  button.

  : Press the  or  button.

 : Press the  button.

Selection 1 Menu

6.13.3. Motor TEST

⑩-3 Motor Test Item Menu

* Caution 1: Before performing this test, install all following units or remove all following units to avoid the toner clogging in the accumulator unit and print cartridge unit.

1. All print cartridges (Black and CMY) 2. Accumulator Unit 3. Waste Toner Cartridge

Caution 2: When performing this test while opening the right cover, lift up the waste toner cartridge to the upper position, or the waste toner will be dispersed.

6.13.4. Paper Detect Sensor TEST

⑩-4 Paper Detect Sensor Test Item Menu

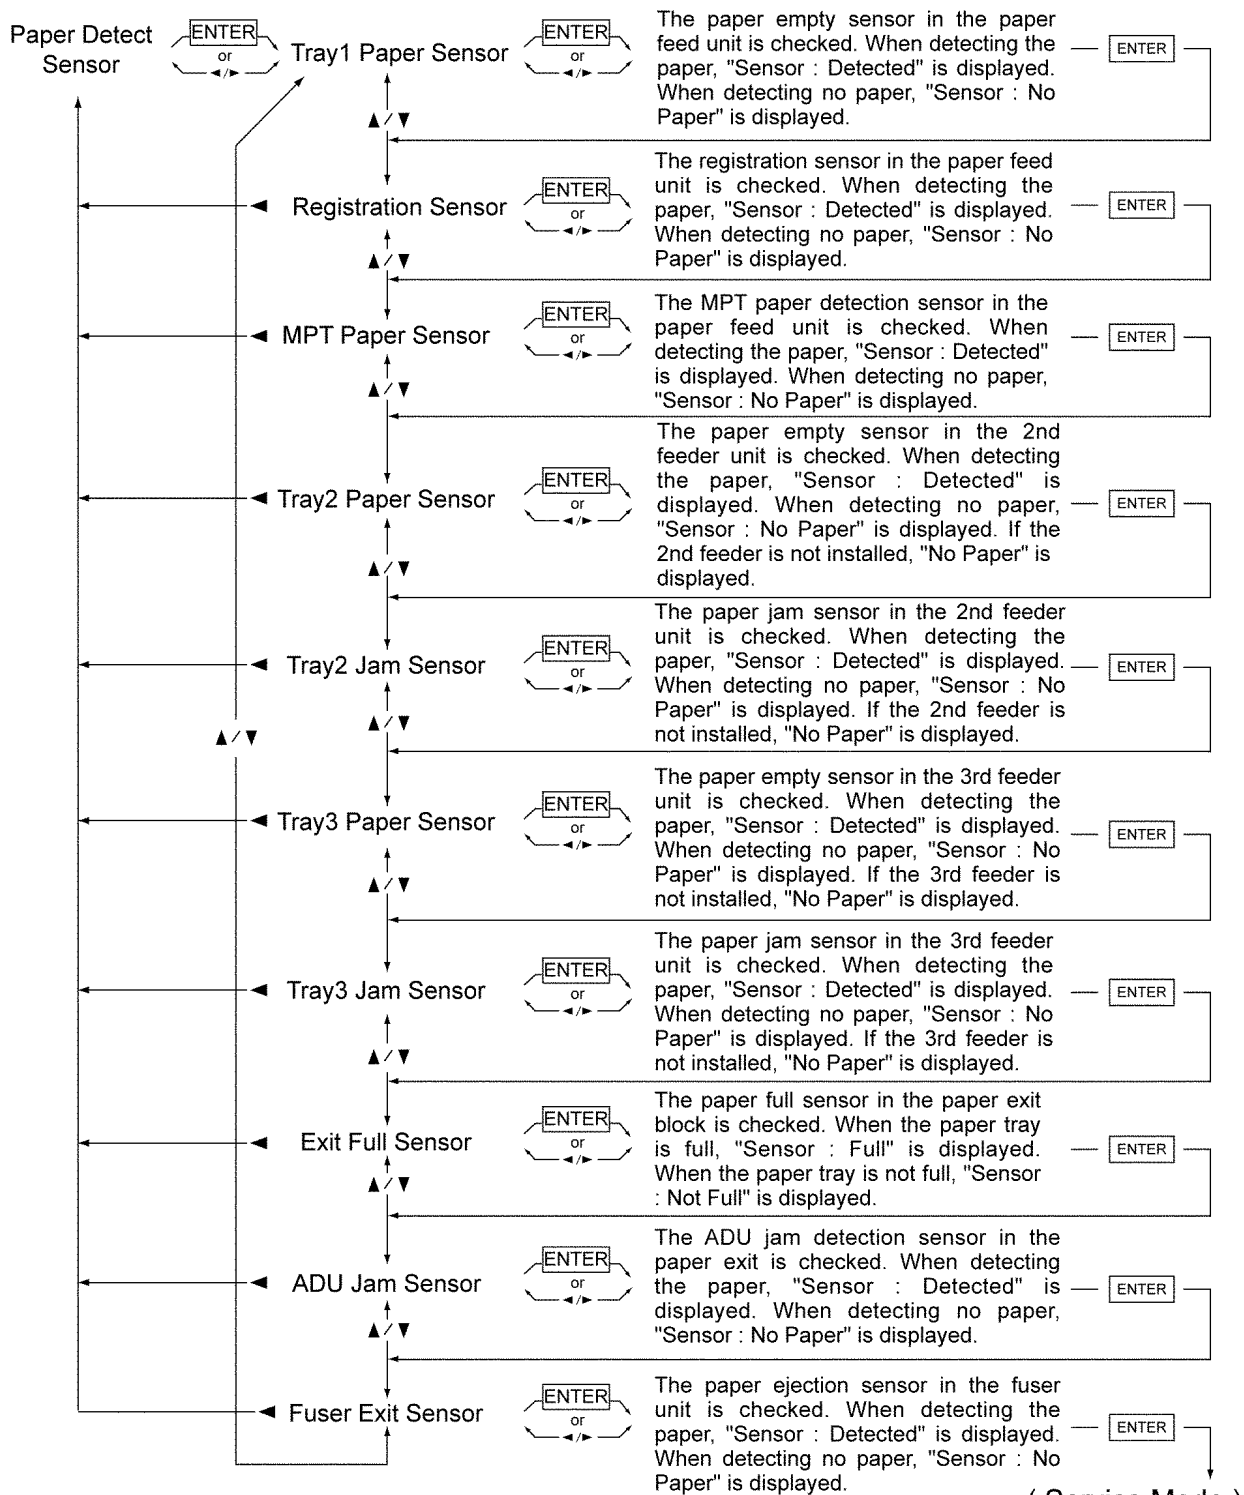

ENTER : Press the  button.

▲/▼ : Press the  or  button.

◀ : Press the  button.

◀/▶ : Press the  or  button.

Selection 1 Menu

6.13.5. Cassette Sensor Test

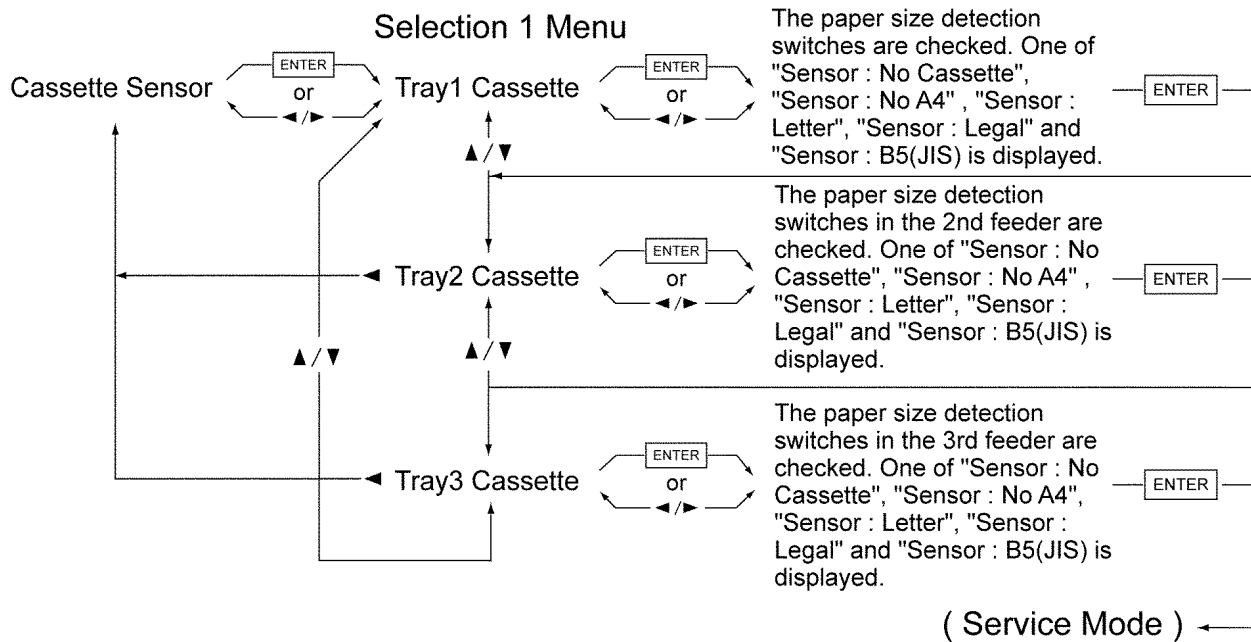

⑩-5 Cassette Sensor Test Item Menu

ENTER : Press the  button.

 : Press the  button.

 /  : Press the  or  button.

 /  : Press the  or  button.

6.13.6. Temp & Humidity Sensor

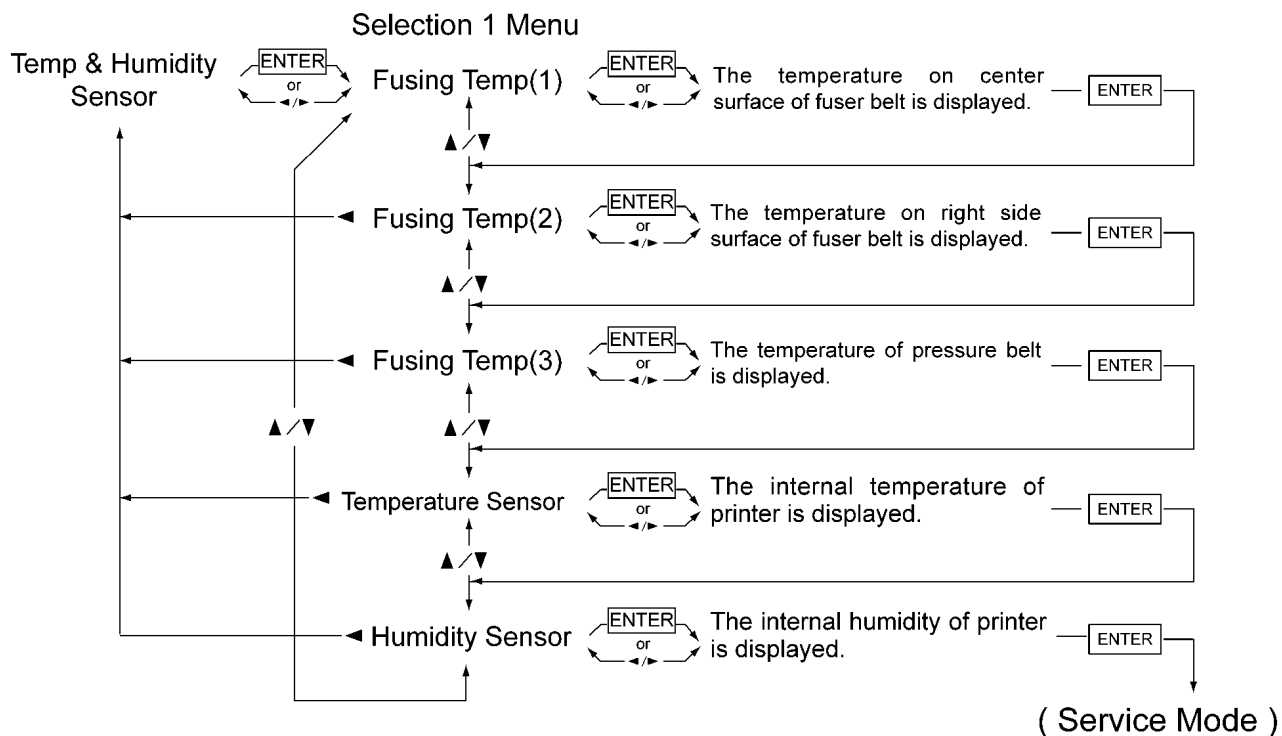

⑩-6 Temp & Humidity Sensor Item Menu

ENTER : Press the  button.

 : Press the  button.

 /  : Press the  or  button.

 /  : Press the  or  button.

6.13.7. WTC & Toner Sensor

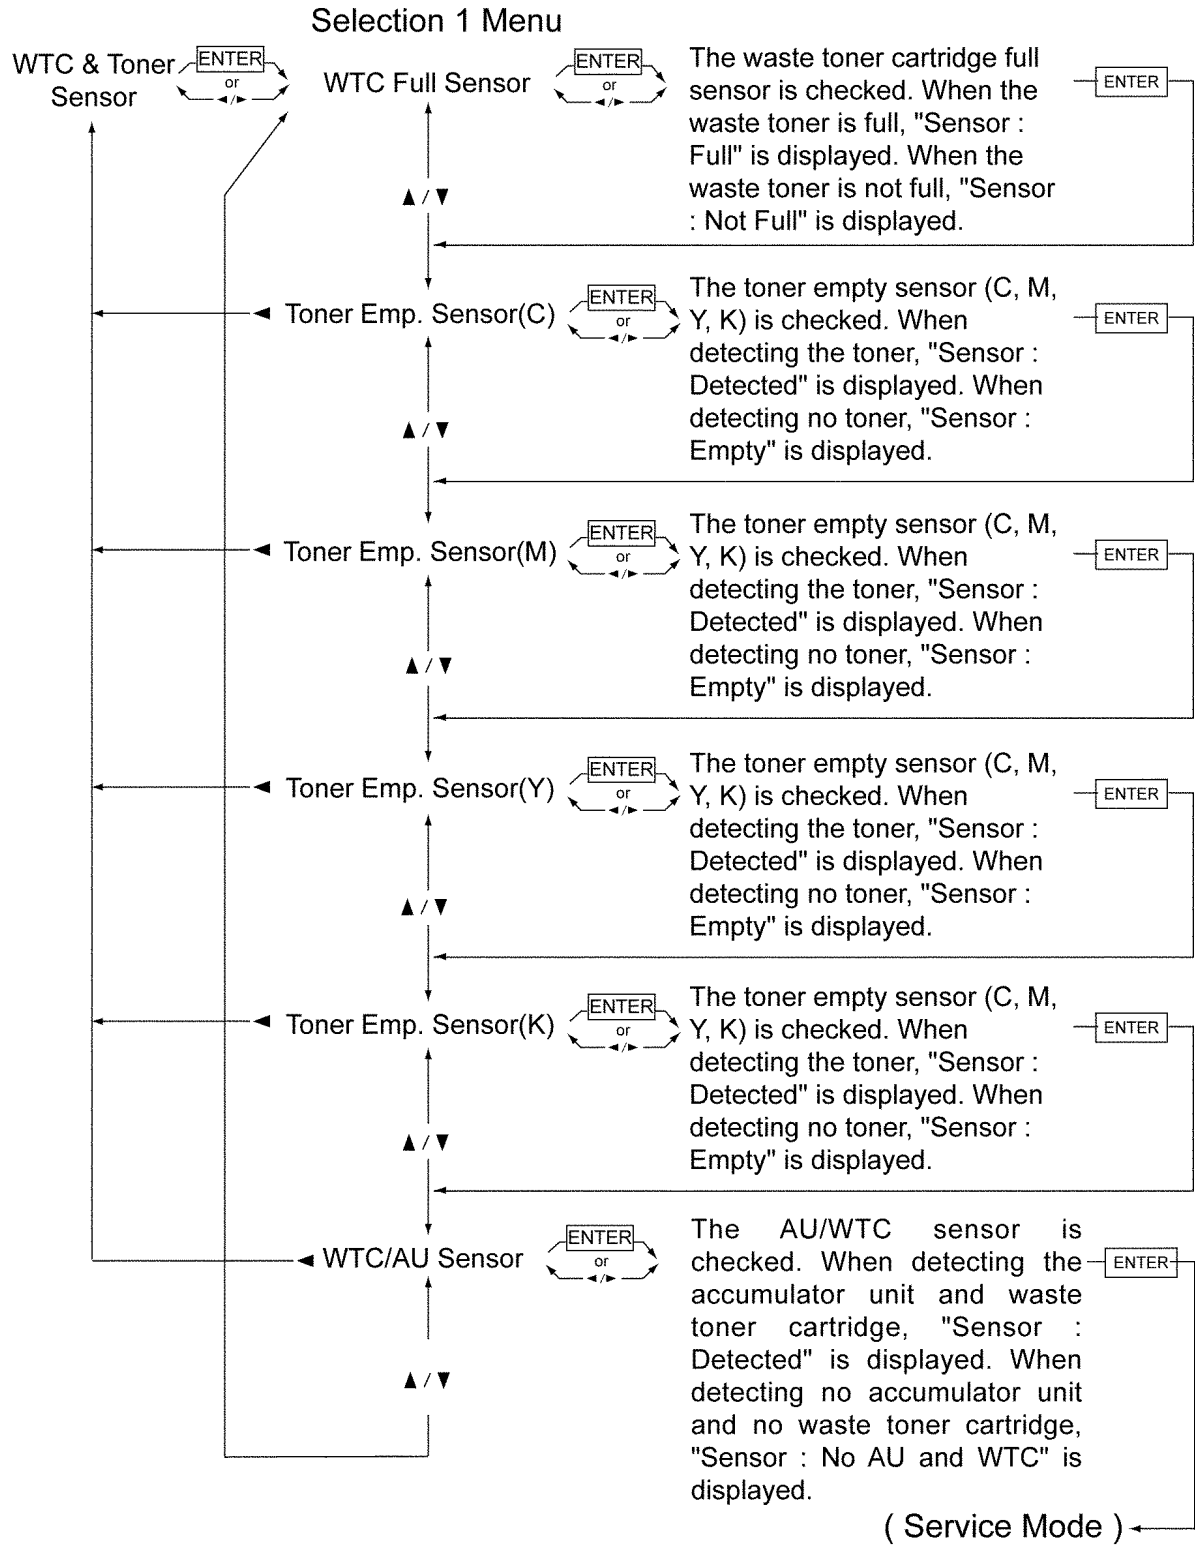

⑩-7 WTC & Toner Sensor Item Menu

ENTER : Press the  button.

▲/▼ : Press the  or  button.

◀ : Press the  button.

◀/▶ : Press the  or  button.

6.13.8. Door Sensor

⑩-8 Door Sensor Item Menu

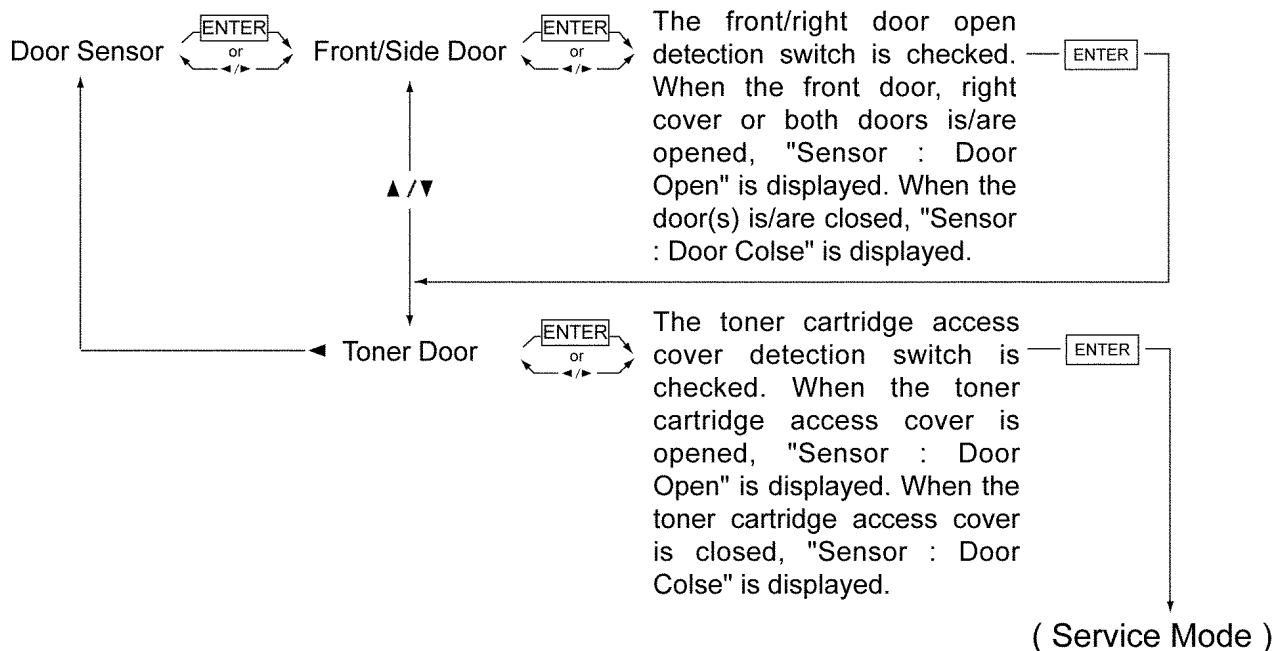

ENTER : Press the  button.

▲/▼ : Press the  or  button.

◀ : Press the  button.

◀/▶ : Press the  or  button.

Selection 1 Menu

6.13.9. Other Sensor

⑩-9 Other Sensor Item Menu

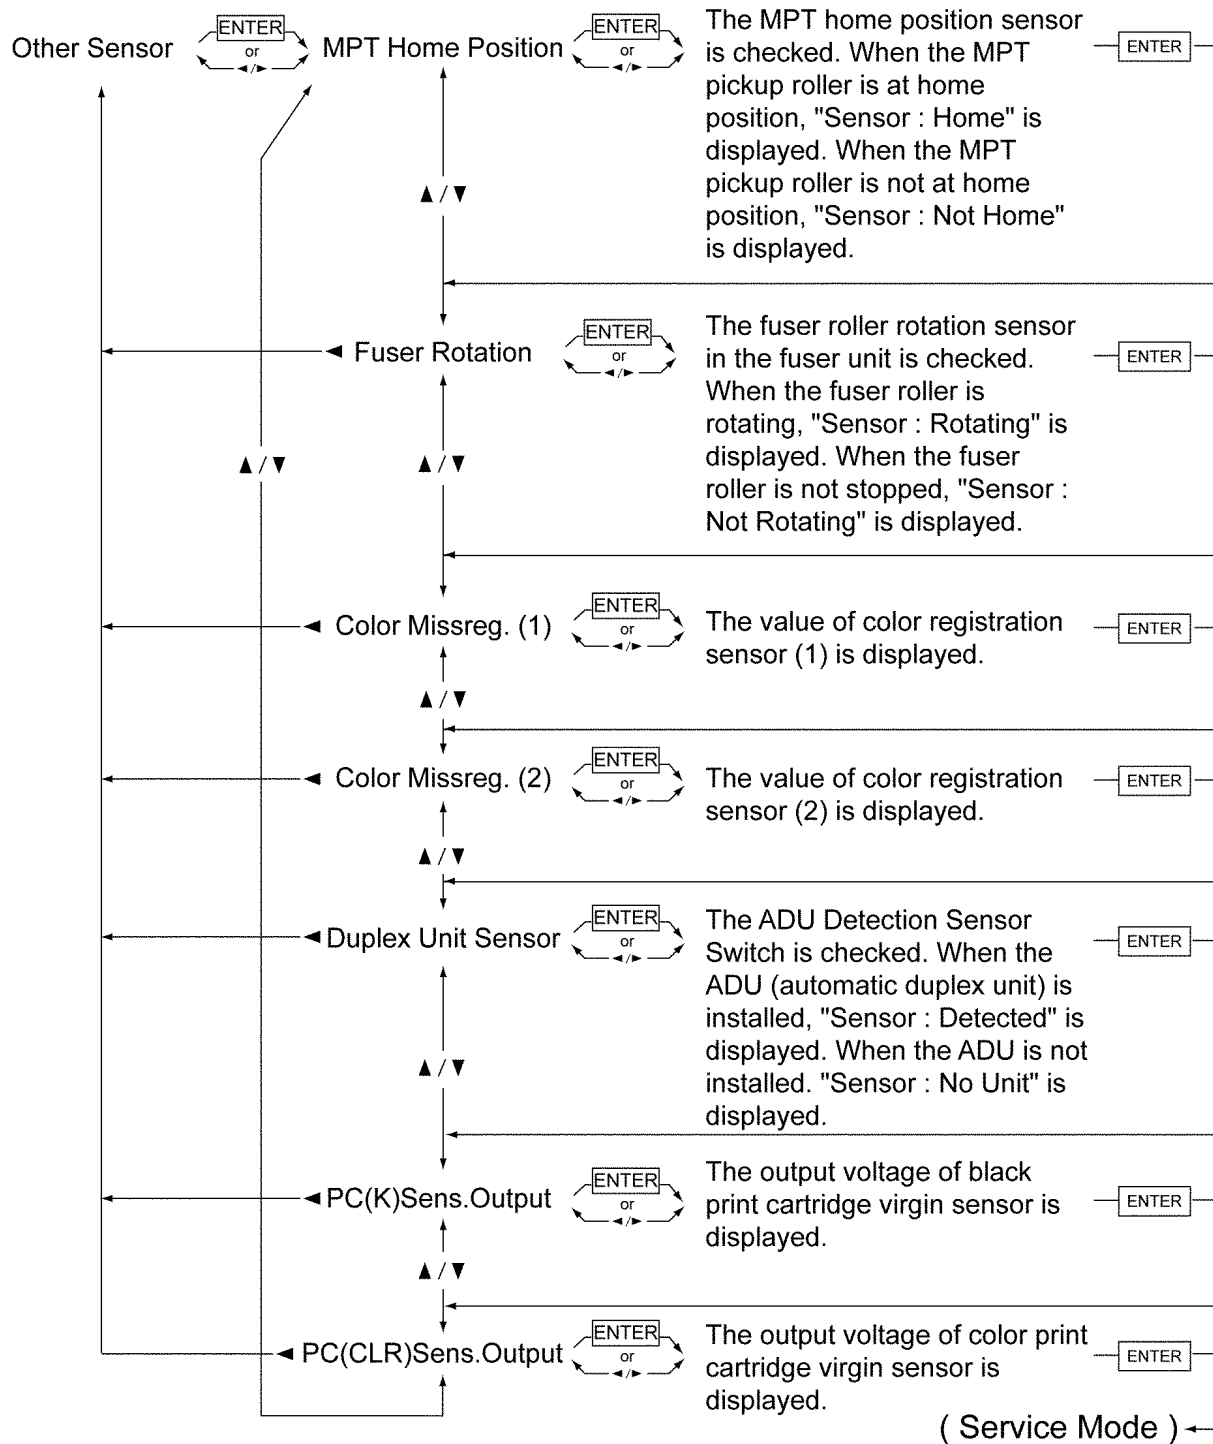

ENTER : Press the  button.

▲/▼ : Press the  or  button.

◀ : Press the  button.

◀/▶ : Press the  or  button.

Selection 1 Menu

(Service Mode)

6.14. Color Correction Item Menu

⑪ Color Correction Item Menu

* : Default

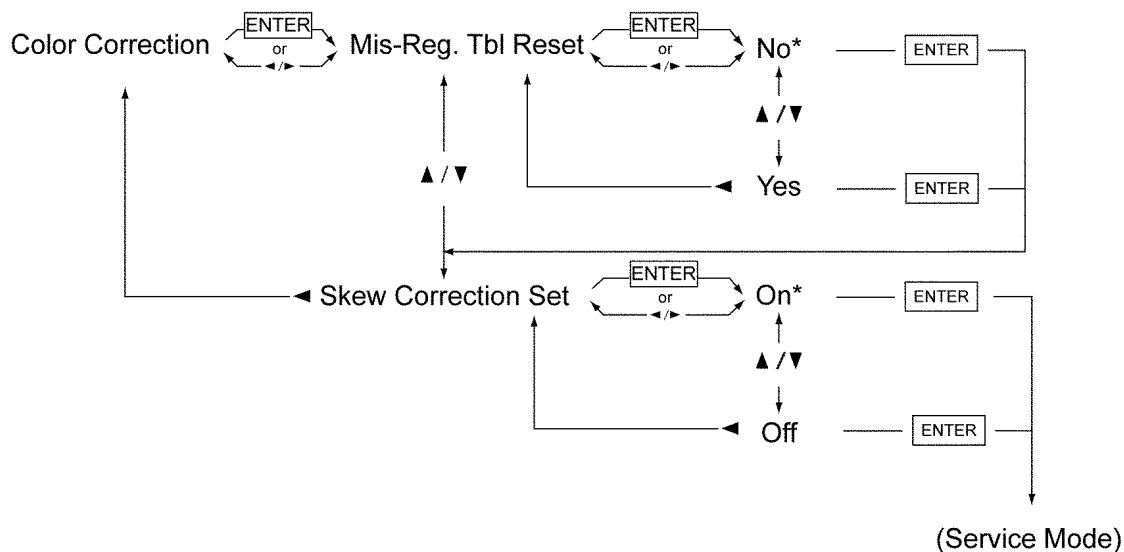

ENTER : Press the  button.

 : Press the  button.

 : Press the  or  button.

 : Press the  or  button.

Selection 1 Menu

6.15. Flag Setting Item Menu

If "Yes" is selected on this menu, the printer will be filled with toner about 5 minutes after turning on the printer the next time.

⑫ Flag Setting Item Menu

* : Default

ENTER : Press the  button.

 : Press the  button.

 : Press the  or  button.

 : Press the  or  button.

Selection 1 Menu

6.16. Printing Network Configuration Report

The following is an example of what is printed when performing the Printing Network Configuration Report (refer to the section 6.1.2. "How to print the Network Configuration Report".)

7 Mechanical Function

7.1. Drive Mechanism General Description

Three motors (CMY motor, BK motor, paper pickup motor) supply drive to each mechanical block within the engine. The CMY motor (DC servomotor) supplies drive to the color print cartridge (CMY PC). The BK motor (DC servomotor) supplies drive to the black print cartridge (Black PC), four color toner

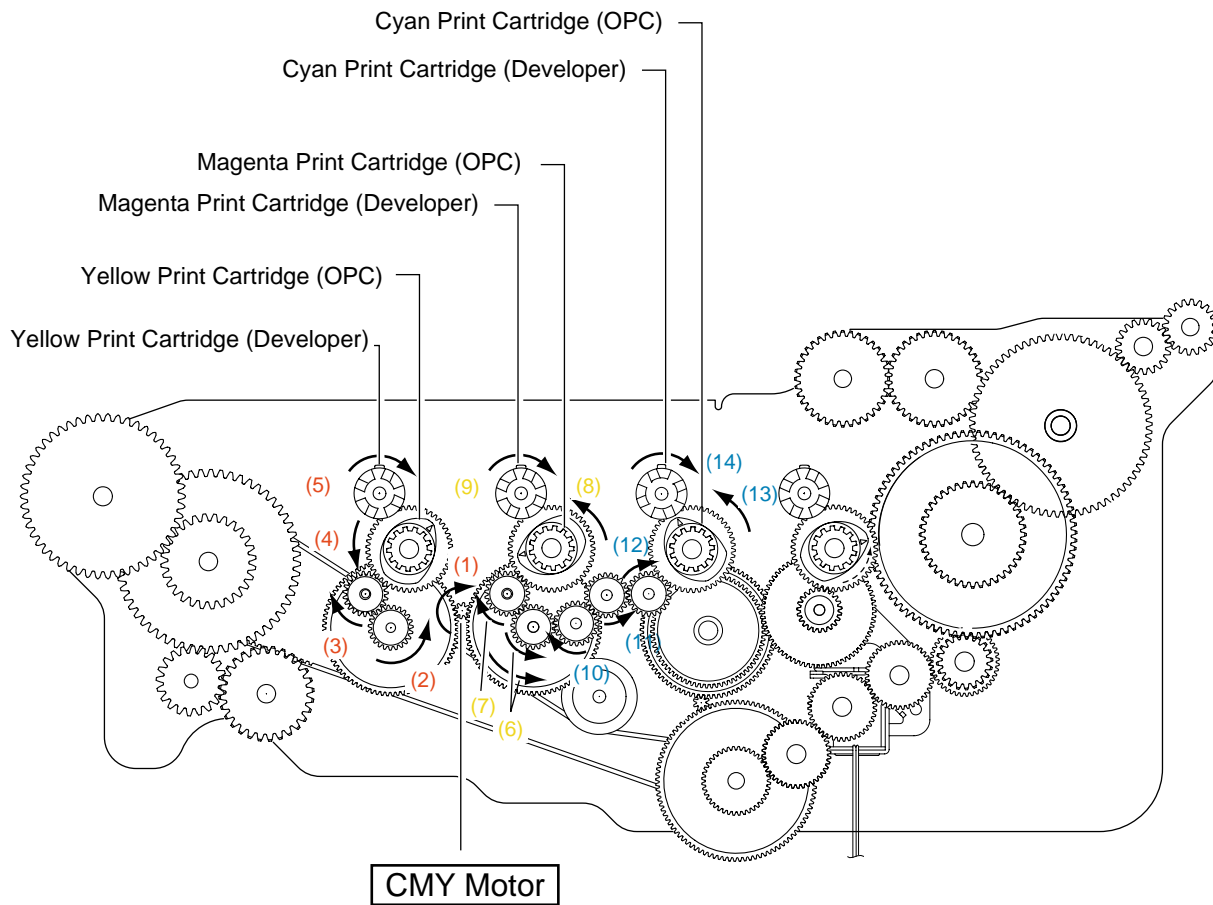

cartridges, accumulator unit (Acc Unit or AU), accumulator tension unit (ATU), paper feed unit and fuser unit.

The paper pickup motor (stepping motor) supplies drive to the multi-purpose paper feeder and option Auto Duplex Unit (ADU).

7.1.1. CMY Motor Rotation Travel

(CMY Motor Rotation Travel)

The CMY Motor Rotation is transmitted in the following number order :

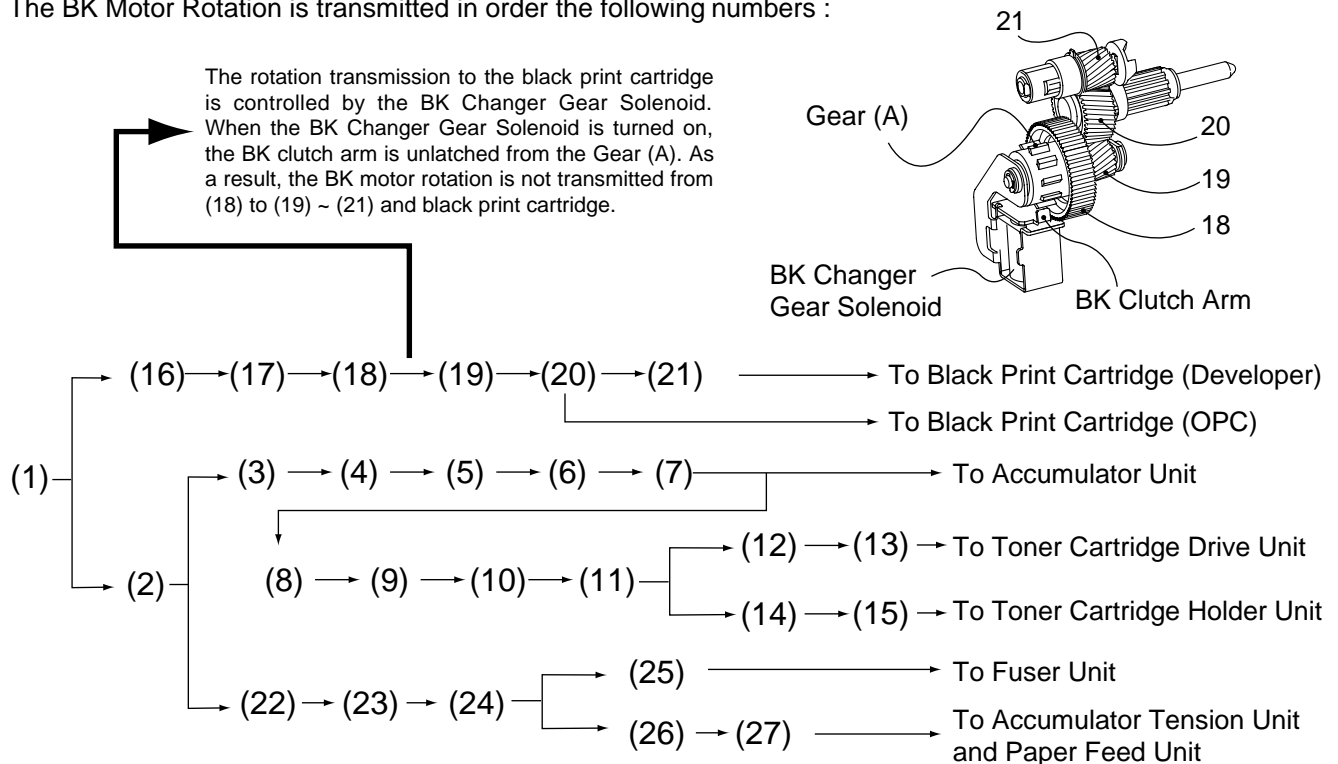

7.1.2. BK Motor Rotation Travel

(BK Motor Rotation Travel)

The BK Motor Rotation is transmitted in order the following numbers :

7.2. Accumulator Tension Unit (ATU) Drive Mechanism

The accumulator tension unit is for operating the function of accumulator unit and depositing waste toner in the waste toner cartridge.

The accumulator unit consists of "ATU Drive Clutch", "Taking

up accumulator belt slack", "Contacting STR Roller to Accumulator Belt", "Selecting of FTR Roller", "lifting up FTR Roller" and "Waste Toner Cartridge Stirring" mechanisms.

7.2.1. ATU Drive Clutch

The ATU drive clutch is used to turn on and off the rotation from the BK motor to the cam shaft. See the following figure-1. The ATU drive clutch consists of the cam ratchet, cam ratchet wheel, cam ratchet wheel gear, 4 planetary gears and accumulator cam switching solenoid. The rotation from the BK motor is transmitted to the cam ratchet wheel or cam ratchet wheel gear through the double teeth gear and 4 planetary gears.

In standby mode, the cam ratchet wheel cannot rotate because hook (A) of the cam ratchet engages with the detent of the cam ratchet wheel, and the cam ratchet wheel gear is free to rotate because the hook (B) is not engaged with the teeth of the cam ratchet wheel gear. With this mechanism, the rotation from the BK motor is transmitted to the cam ratchet wheel gear and rotates in the arrow (C) direction.

When the accumulator switching solenoid is turned on for a predetermined time (150 ~ 200 msec) to perform the printing process, the hook (B) moves in the arrow (B) direction and is engaged with the teeth of cam ratchet wheel gear. The rotation of the cam ratchet wheel gear is stopped, then the hook (A) moves in the arrow (A) direction and is released from the detent of the cam ratchet wheel. As a result, the cam ratchet wheel is free and the cam ratchet wheel is rotated in the arrow (D) by the rotation transmitted from the BK motor through the double teeth gear and 4 planetary gears. After this, the hook (A) engages with the detent (B) and the cam ratchet wheel is locked by hook (A). The rotation from the BK motor is transmitted to the cam ratchet wheel gear and is not transmitted to the cam shaft.

After hook (A) engages detent (C) and detent (D) the same way, hook (A) engages detent (A) again.

Figure-3

There are 4 statuses of the accumulator tension unit for controlling the printing process. These 4 statuses are set by the 4 detents of the cam ratchet wheel.

- Accumulator Belt Cleaning Position:

When the hook (A) engages with the detent (B), the slack in the accumulator belt is taken up by the “Accumulator belt slack” mechanism. The cleaning of the accumulator belt is done.

- Toner Transfer Position:

When the hook (A) engages with the detent (C), the FTR roller(s) is (are) raised and come in contact with the accumulator belt by the “Lift FTR Roller” mechanism for transferring the toner from the OPC drum to the accumulator belt, and the STR roller is engaged with the accumulator belt by the “STR Roller to Accumulator Belt” mechanism for transferring the toner to the paper.

- FTR Roller Release Position:

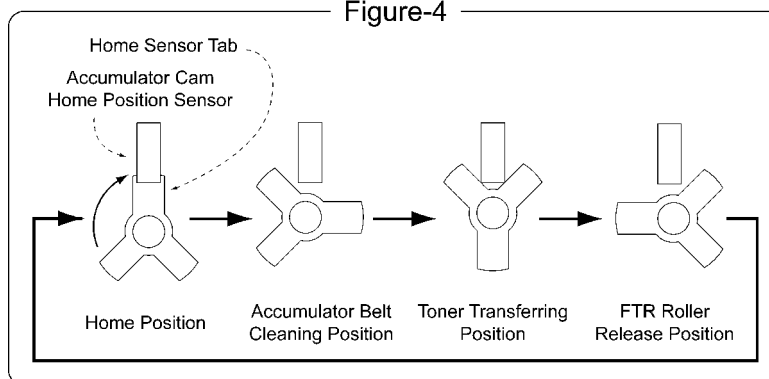

When the hook (A) engages with the detent (D), the FTR bias roller(s) is (are) released from the accumulator belt by the “Lift FTR Roller” mechanism.

- Home Position:

When the hook (A) engages with the detent (A), the tension is released in the accumulator belt and the STR roller is removed from the accumulator belt.

The accumulator cam home position sensor and sensor tab are for detecting whether the status of the accumulator tension unit is shifted from one position to next within predetermined time or not. If the status of the accumulator tension unit is not shifted to the next position within the predetermined time, Error Message “Printer Error 24” is displayed on the LCD display. The following chart figure-4 indicates the relation between the sensor tab and accumulator cam home position sensor at each position.

Figure-4

7.2.2. Taking up Accumulator Belt Slack

Taking up accumulator belt slack is performed by the tension cam link, cam shaft, STR cam in the accumulator tension unit and 4 levers (A) - (D), belt tension roller in the accumulator unit. The following indicates the location of these parts (tension cam link, cam shaft, etc.).

The tension cam link in the accumulator tension unit is engaged with the lever (A) in the accumulator unit [Part (E)]. When the cam shaft start to rotate, the tension cam link moves to the arrow (2a) direction by the movement of STR cam linked with the cam shaft. This movement is transferred to the lever (D) through the levers (B) - (C). The belt tension roller linked with the lever (D) moves to the arrow (6) direction. This movement takes up the slack in the accumulator belt.

7.2.3. Contact STR Roller to Accumulator Belt

The STR roller is in contact with the accumulator belt or released from the accumulator belt by the STR release lever linked with the STR cam in the accumulator tension unit. The following indicates the STR cam, cam shaft and STR release lever in the accumulator tension unit.

When the accumulator tension unit is in the Home Position, the STR roller is released from the accumulator belt because the top end of STR release lever pushes the STR roller holder in the arrow (A) direction. When the cam shaft rotates, the cam rotates in the arrow (B) direction. When the cam shaft rotates 180° (the status of accumulator tension unit is in the “Toner Transfer Position”), the STR tension spring moves the STR roller supported by the STR roller holder in the arrow (C) direction, the gap (A) decreases between the part (A) and surface of cam. As a result, the STR roller moves in contact with the accumulator belt. This contact is held until the cam shaft (cam) rotates 270° (The FTR Roller Release Position). When the cam shaft rotates 90° (the status of accumulator tension unit returns to the Home Position), the cam moves the STR release lever in the arrow (A) direction and releases the STR roller from the accumulator belt.

7.2.4. Lifting up FTR Roller

The FTR roller(s) is (are) contacted to the accumulator belt or released from the accumulator belt by the “FTR Roller Lifting Up” mechanism consists of the FTR lift levers, FTR cams, cam shaft, etc.,. The following indicates the FTR lift levers, FTR cams, cam shaft and FTR cam slider in the accumulator tension unit.

The parts (A) and (B) on the FTR Cam Slider have been engaged with the "FTR Roller Lifting Up" mechanism in the accumulator unit. The FTR roller (s) in the accumulator unit is (are) contacted (released) to (from) the accumulator belt by the movement of the FTR cam slider.

The FTR cam slider is engaged with the projections (C)-(D) in the accumulator tension unit. The projection (C) on the FTR lift lever moves to the arrow (E1) direction by the FTR cam rotation. This projection (C) movement moves the FTR cam slider to the arrow (E2) direction. When the FTR cam slider moves to the (1) direction of arrow (E2), the FTR roller in the accumulator unit contacts with the accumulator belt. Regarding the detail information, refer to the next section “FTR Roller Lift Mechanism”. This model has 4 FTR rollers (cyan, magenta, yellow and black). The changer solenoid, changer lever and FTR cam slider are used for selecting FTR rollers. Normally (when the changer solenoid is turned off), the FTR roller for black is selected. When the changer solenoid is turned on, the changer lever moves to the arrow (F1) direction. As a result, the FTR cam slider moves to the arrow (F2) direction. All FTR rollers (cyan, magenta, yellow and black) are selected, and contacted with the accumulator belt when the FTR cam slider moves to the (1) direction of arrow (E2).

7.2.4.1. FTR Roller Lift Mechanism

The “FTR roller lift” is performed by the FTR cam slider in the accumulator tension unit, FTR roller lift lever, lift arm, spring and FTR roller support lever. The following indicates the FTR roller lift lever, lift arm, spring, etc., in the accumulator unit.

<FTR Roller Lift Mechanism>

The FTR cam slider in the accumulator tension unit moves the FTR roller lift lever to the arrow (1) direction. This movement turns the lift arm to the arrow (2) direction. The lift arm lifts up the FTR roller through a spring and the FTR roller contacts to the accumulator belt.

7.2.5. Selecting of FTR Roller

There are four FTR rollers, three colors (yellow, magenta, cyan) and one for black. The changer solenoid is for selecting these FTR rollers. When turning on the changer solenoid, the changer lever moves in the arrow (1) direction. The pin on the changer lever moves the FTR cam slider in the same direction [arrow (2)]. This movement moves the FTR roller lift levers (see previous section “FTR Roller Lift Mechanism”) in the accumulator.

When monochrome printing, the part (B) is engaged with the projection (B) on the black FTR roller lift lever. The black FTR roller lift lever only moves in the Arrow (B) direction and black FTR rollers are contacted with the accumulator belt.

When color printing, the changer solenoid is turned on, moving the FTR cam slider in the arrow (A) direction. The projection (A) is engaged with the part (B). When the FTR cam slider moves to the Arrow (B) direction, the CMY and black FTR roller lift levers move to the Arrow (B) at the same time. As a result, the FTR rollers for color (yellow, magenta, cyan) and black are in contact with the accumulator belt at the same time.

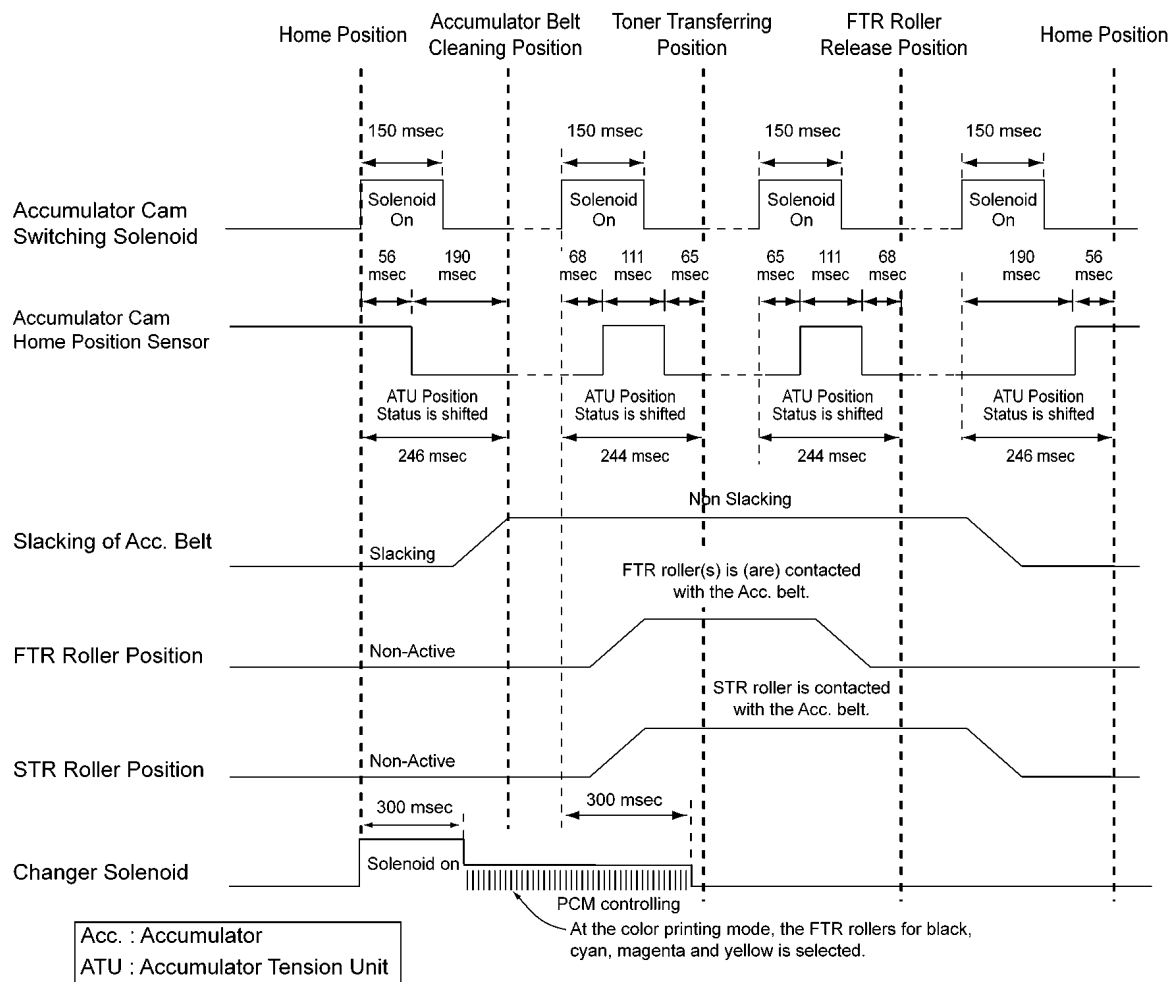

7.2.6. Waste Toner Cartridge Stirring

The waste toner cartridge is engaged with the WTC drive cam as shown below. The WTC drive cam is fixed to the cam shaft in the accumulator tension unit. The WTC drive cam is rotating in the arrow (A) direction by the cam shaft. When the cam shaft rotates one full turn, the WTC drive cam rotates 4 full turns. This rotation moves the waste toner cartridge in the arrow (B) direction, stirring the toner in the waste toner cartridge. By this shuttling movement of the waste toner cartridge, the toner falls to the bottom of waste toner cartridge.

7.2.7. Timing Chart

The following chart indicates the timing to the movement of accumulator tension unit.

7.3. Print Process

This Laser Printer creates an image on paper using a technique called laser electrophotography. The printer uses the electrographic process known as Discharged Area Development, or “write black”. In this process, a digitally modulated laser scans laterally across a rotating OPC (Organic Photo Conductive) drum that has been negatively charged. Wherever the OPC drum is exposed by laser beam, the image is written and toner is transferred.

To generate a color image, the OPC drum suitably rotate to the image length, one for each primary color and black. During each successive pass, the laser exposes the portions of OPC drum that correspond to the primary color’s component of the image. Toner is attracted to the laser-exposed portions of the OPC drum.

As each color layer is developed on the each OPC drum, they are transferred to the accumulator belt until all four color layers eventually reside one on top of the other on the accumulator belt. At this point, a sheet of paper is advanced under the accumulator belt and the toner is transferred to the sheet of paper. The paper advances to the fuser, where heat and pressure permanently bond the toner to the paper. From the fuser, the paper is driven to the output tray.

A cleaning blade scrapes residual toner from the OPC drum before the next primary color toner is applied to the OPC drum. This prevents contamination of the next color layer. The cleaning blade is in constant contact with the OPC drum.

An accumulator belt cleaner scrapes residual toner from the accumulator belt. This prevents “ghosting” of the next print. The blade only comes in contact with the belt after the accumulated toner layers are transferred to the sheet of paper.

Each block is explained in the following sections.

- | | |
|--|---|
| ① 7.3.1 Charging | ⑤ 7.3.5 Paper Pickup |
| ② 7.3.2 Laser Exposure and Scanning | ⑥ 7.3.6 Toner Transfer to Paper |
| ③ 7.3.3 Developing | ⑦ 7.3.7 Fusing |
| ④ 7.3.4 Toner Transfer to the Accumulator Belt | ⑧ 7.3.8 Paper Exit and Paper Switchback |

7.3.1. Charging

The charging roller, comes in contact with the OPC drum surface and charged to approximately -1100 volts, and ensures a uniform negative potential of approximately -500 ~ 550 volts on the OPC drum surface by the charging roller, depending on the selected dot per inch printing and ambient temperature.

7.3.2. Laser Exposure and Scanning

7.3.2.1. Laser Exposure

As the OPC drum rotates, the uniformly charged OPC drum is exposed by the modulated laser beam. The vertically-moving OPC drum passes in front of horizontally scanning laser beam, and the negative charge on the OPC drum surface are neutralized by the laser beam. This forms a latent image.

Laser output power is either approximately 0.25 mW or 0.4 mW on the OPC drum surface, depending on whether the printer is printing in 1200 dots per inch (dpi) mode or 600 dpi mode. The laser exposure, the negative potential on the OPC drum varies from approximately -500 ~ 550 volts (unexposed) to -50 volts (fully exposed).

7.3.2.2. Laser Scanning

A laser diode generates the laser beam, and lenses and mirror in the laser scanner direct the beam to the OPC drum. The beam is made parallel by the collimator lens and is directed at the rotating polygonal mirror, attached with the polygon motor. The beam is made parallel by the collimator lens and is directed at the rotating polygon mirror. The polygon mirror rotates at a constant revolutions approximately 22,000 per minute. This transforms the beam into a horizontally scanning beam, which is directed through the primary lens, altering the beam's angular rotation motion into a constant horizontal motion. The toric correction lens corrects the beam for any vertical misregistration. Next, the beam reflects off of a mirror and passes through a window where it scans across the rotating OPC drum. At the beginning of each horizontal sweep, the horizontal sync mirror deflects the laser beam to the horizontal sync sensor. This informs the engine control board that the laser beam is beginning its horizontal sweep and that it can begin to modulate the signal with the data to be printed on that line of the image.

7.3.3. Developing

As the OPC drum continues to rotate, it passes by the developer roller. The developer roller is charged to a potential approximately -200 volts (350 VAC p-p). Toner is attracted to the exposed portions of the OPC drum in reverse proportion to the negative charge. The greatest amount of toner is transferred to the most positive potential. The developer roller rotates at 1.33 times the speed of the OPC drum to ensure a constant supply of toner.

Inside each developer is a toner supply roller that rotates in the opposite direction from the developer roller. This supplies a layer of toner onto the developer roller. The doctor blade smooths and evenly distributes the toner on the developer roller. Gear-driven paddle churns the toner and keeps it fluidized and moving towards the developer roller.

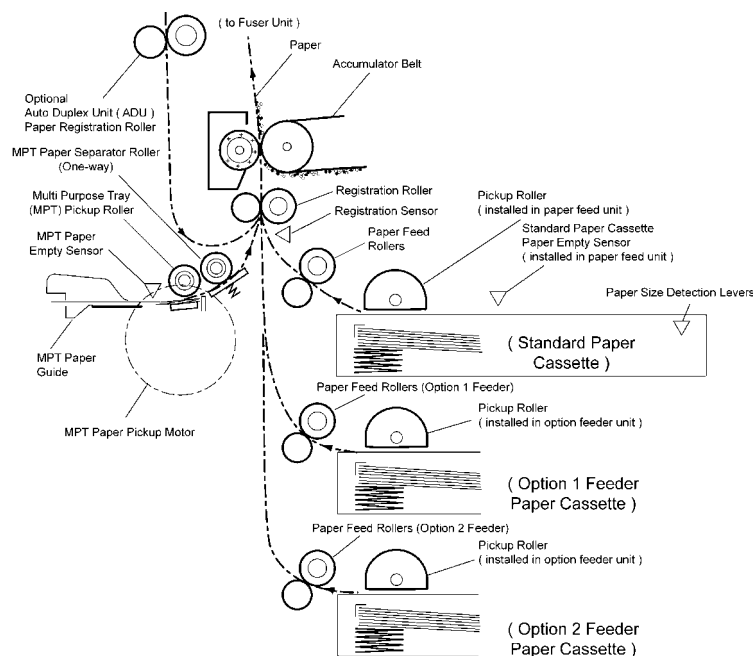

7.3.4. Toner Transfer to the Accumulator Belt

As the OPC drum rotates, it comes in contact with the accumulator belt, which is rotating at the same speed. Located under the accumulator belt at the contact point with the OPC drum, the first bias transfer roller carries a charge approximately +700 volts (FTR voltage). This strong potential attracts and holds the toner from the OPC drum to the accumulator belt. The four color layers are created while the accumulator belt makes one complete rotation.

Any toner remaining on the OPC drum after the transfer to the accumulator belt is scraped off by the OPC drum cleaning blade, which is always in contact with the OPC drum. This leaves the OPC drum clean for the next layer of toner to be transferred from the developing roller into the developer.

7.3.5. Paper Pickup

The cam-shaped pickup rollers are driven by the BK (black print cartridge) drive motor and force a sheet between the paper feed rollers. The pickup roller completes only one rotation to pick a sheet of media from the paper cassette. This will push the sheet of paper to the paper feed rollers but does not pick a second sheet. Alternately, depending on the user's selection, media may be picked from the multi-purpose tray. The MPT tray pickup roller is driven by the MPT paper pickup motor and feeds a sheet of media or an envelope into the registration roller.

The paper feed rollers advance the sheet of paper to the registration roller. The paper is driven lightly against the stationary registration rollers to create a slight buckle in the paper, aligning the sheet of paper. At this point, the paper remains stationary (since the registration roller clutch in the paper feed unit is not yet energized) until the image is ready to be printed on the paper. The registration sensor detects whether the sheet of paper arrived at the registration roller after being properly picked and traveling through the paper feed rollers.

The paper feed unit has the standard paper cassette paper empty and registration sensors. The standard paper cassette has the MPT paper empty sensor for multi-purpose tray and the paper size detection levers. The standard paper cassette paper empty sensor detects whether the paper is set in the standard paper cassette. The paper size detection levers are used for detecting paper size and whether the standard paper cassette is installed in the printer. The MPT paper empty sensor detects whether the paper is set in the MPT tray.

7.3.6. Toner Transfer to Paper

Once all four layers of toner reside up on the accumulator belt, the registration roller clutch is energized to advance a sheet of paper (which has already been picked) to the second bias transfer roller. The toner image on the rotating accumulator and the paper that is being fed into the image unit are synchronized for proper alignment. The leading edge of toner image on the accumulator belt is aligned 4 mm from the leading edge of the paper. A strong positive voltage in the second bias transfer roller attracts the toner from the accumulator belt to the paper. The second bias transfer roller voltage is approximately +1400 volts. This voltage varies depending on the ambient temperature, humidity, print speed and media being printed upon. The paper (or transparency film) advances at the same speed as the accumulator belt.

As the toner is being transferred to the paper, the accumulator belt cleaning blade is activated. This blade scrapes any remaining traces of toner from the accumulator belt prior to the next image transfer. The scraped toner is discharged to the waste toner cartridge by the spiral paddle shaft.

7.3.7. Fusing

After toner image has been applied to the paper, it passes through the fuser. When the BK motor starts to rotate, the IH coil is turned on, heating the heat roller. As a result, the fuser belt, contacted with the heat roller surface, is heated by the heat roller. A heated fuser belt melts the toner and pressure drives it into the paper. The melted toner bonds to the paper. After fusing, the paper advances to the output tray. When the printer is idle, the IH coil is turned off and the fuser belt is not heated. At the 600 dpi printing mode, the fuser belt is set to approximately 175°C. This fuser belt temperature varies depending on 1200 dpi printing mode, thick paper printing mode, transparency printing mode, etc. The fuser unit has the paper ejection sensor, which detects the sheet of paper as it leaves the fuser.

7.3.8. Paper Exit and Paper Switchback

7.3.8.1. Normal Printing Mode (Not Duplex Printing Mode)

After fusing, paper is fed to the output tray by the paper exit roller. Rotation from the BK motor is transmitted to the double teeth gear. The rotation of double teeth gear is transmitted to the paper exit roller gear through intermediate gears in order of numbers (1 - 8). The arrows indicate the rotation direction of each gear.

The Paper is ejected face down and stored in the output tray. The paper full sensor detects whether the paper output tray is full, and if the tray is full, the message "Output Tray Full" is displayed on the LCD panel.

7.3.8.2. Duplex Printing Mode (Paper Switchback)

The switchback solenoid is turned on by the time the top edge of paper passes by the paper jam sensor on the fuser unit. The switching lever engages with the switching gear-B, and the rotation of rotation switching gear-B is locked. As a result, the rotation from the BK motor is transmitted to the paper exit roller in order of numbers (1 - 8) through the double teeth gear. The arrows indicate the rotation direction of each gears.

Also, the switching lever moves the paper path switching guide in the direction of arrow (A) as shown in the figure-1. This advances the sheet of paper between the paper exit roller and switchback pinch roller. The paper is fed to the output tray by the paper exit roller and pinch roller. At the proper time, the switchback solenoid is turned off, which returns the switching lever to the home position. The rotation switching gear is locked by the switching lever, and the rotation from the BK motor is transmitted to the paper exit roller in order of numbers (1 - 8) through the double teeth gear. As a result, the paper exit roller rotates in the reverse direction. The paper path switching guide also is moved in the direction of arrow (B) (see figure-2) and returns to the home position. The paper is fed to the auto duplex rollers in the optional Auto Duplex Unit through the paper guides along the paper path switching guide. Further, the paper is fed to the registration roller by the auto duplex rollers and advanced to the fuser unit. After fusing, the paper arrives the paper exit roller and is fed to the output tray by the paper exit roller.

8 Removal and Replacement Procedures

Before performing the following steps, unplug the AC power cord, then remove the 4 toner cartridges (cyan, magenta, yellow and black), 2 print cartridges (black and color), waste toner cartridge and standard paper cassette from the printer.

Caution: Don't loosen or remove any component (nuts, screws, fasten terminals, etc.) on (from) the IH coil unit.

A large current (approx. 12Arms: 100V AC Power) flows

in the IH coil, IH cable, thermostat cables and thermostats. The nuts, screws and fasten terminals connect the IH cable to the IH coil and thermostats. For protection from fire, smoke and other hazard, don't loosen or remove any component on (from) the IH coil unit.

Nuts and Screws :

Don't loosen or remove any component (nuts, screws, fasten terminals, etc.) on (from) the IH coil unit.

The IH cable is connected to the IH coil and thermostats by the nuts, screws and fasten terminals. When the IH unit is turned on, the current (approx. 12 Arms : 100V AC Power) is supplied to the IH coil and thermostats through the IH cable & thermostat cables. If loose (or removed) these nuts, screws and fasten terminals, the contact resistances at these connections increases. This will generate dangerous intense heat at these connections when turning on the IH unit. As a result, the IH unit (or printer) may emit smoke or can cause a fire at the worst. Don't remove or loosen any component from (on) the IH coil unit. If removing or loosening is done, replace it with a new IH unit for servicing or repairing.

8.1. Fuser Unit

Caution:

1. The fuser is hot. To avoid personal injury, wait 1 hour for fuser to cool after turning the power off, and then service it.
 2. When replacing parts, use only the manufacturer's specified components.
 3. After servicing, be sure to restore the lead dress, insulation barriers, insulation papers, shields, etc.
- (1) Open the front door.
 - (2) Disconnect the fuser connector from the printer.
 - (3) Move the 2 fuser lock green tabs in the arrow directions to unlatch the fuser unit.
 - (4) Remove the fuser unit.

8.2. Accumulator Unit (Acc. Unit)

- (1) Open the right cover.
- (2) Loosen the 2 Acc. unit lock screws.
- (3) Slide out the Acc. unit from the printer with care to prevent damage to accumulator belt.

8.3. Automatic Duplex Unit, Front Door Cover and STR (Second Transfer Roller) Bias Assembly

8.3.1. Automatic Duplex Unit

- (1) Open the front door.
- (2) Remove the automatic duplex unit.

8.3.1.1. Disassembly

1. Remove the ADU Cover Assembly.
2. Remove the gear cover while releasing the 4 hooks.
3. Remove the 4 gears.
4. Remove the screw, earth plate and pinch roller earth spring.
5. Remove the regist roller gear, 2 plastic washer, 2 bushings and regist roller.

1. If necessary, remove the pinch roller, 2 bushings and 2 springs from the ADU cover.

1. If necessary, remove the ADU lock lever, ADU lock lever spring and Jam sensor arm from the ADU frame.

8.3.2. Front Door with STR Bias

- (1) Remove the left and right front door axes by releasing the hooks.
- (2) Release the plastic belt and front support lever from the front door.
- (3) Remove the front door.

8.3.3. STR (Second Transfer Roller) Unit

- (1) Release the STR roller cover by moving it in the arrow (A) direction, then remove a STR Roller Assembly.
- (2) Remove the 4 screws while pushing the STR holder in the arrow (A) direction and STR Unit from the front door cover.

- (3) Remove 4 plastic washers and 2 STR bushings from the STR hinge shaft.
- (4) Slide out the STR hinge shaft from STR unit.
- (5) Separate the STR holder assembly from the STR frame base assembly.
- (6) If necessary, remove the STR roller holders (1 screw), STR springs, STR cover assembly, etc.

8.4. Right Cover

- (1) Release the 2 hooks of the cartridge lever A.
- (2) Release the plastic strap from the right cover.
- (3) Remove the right cover while releasing the 3 hinges and hook from the printer chassis.

8.5. Rear, Left and Top Covers

8.5.1. Rear Cover

- (1) Remove the 2 main control board screws.
- (2) If necessary, remove the main control board.

- (3) Remove the 2 screws.
- (4) Release the 5 hooks, using a small flat blade screw driver.
- (5) Remove the rear cover.
- (6) If necessary, remove the cassette cover and cable cover from the rear cover.

8.5.2. Left Cover

- (1) Remove the screws (2).
- (2) Release the openings from the 2 projections on the bottom side of the printer while removing the left cover with the toner cartridge access cover while releasing the 3 hooks.

8.5.3. Top Cover with LCD Panel

- (1) Release the 7 hooks to separate the LCD panel cover from the top cover.
- (2) Separate the LCD panel cover with the LCD panel.
- (3) Disconnect the LCD cable and earth lead wire.
- (4) Release the 5 hooks (A) from the printer chassis.
- (5) Release the 2 hooks (B) from the printer chassis using a small flat-blade screwdriver as shown in the Fig-1.
- (6) Separate the top cover from the chassis.
- (7) Disconnect the sensor cable from the top cover.

- (8) Remove the 6 screws and LCD panel.
- (9) Remove the 2 switch buttons and operation key.

8.6. Color Registration Sensor

Before performing the following steps, unplug AC cord, then remove the 4 toner cartridges (cyan, magenta, yellow and black), waste toner cartridge and accumulator unit from the printer

- (1) Open the right cover.
- (2) Open the PC holder assembly.
- (3) Remove the color registration sensor board assembly (1 screw).
- (4) Disconnect the color registration sensor cable.

- (5) Separate the color registration sensor board from the registration sensor holder (2 screws).
- (6) If necessary, remove the accumulator unit detector and detector spring from the registration sensor holder.

Note:

When replacing the color registration sensor board, perform the "Mis-Reg.Tbl Reset" (see the section 6.14 "Color Correction Item Menu".) in the Service Mode to initialize the parameter regarding the color registration.

8.7. Engine Control Board, Toner Cartridge Holder, Cartridge Drive Unit, Paper Pickup Motor, Main Drive Unit, Bias Unit, Fan Motor and Fan Motor Duct

8.7.1. Engine Control and Temperature/Humidity Sensor Boards

Before performing the following steps, remove the left, top and rear covers.

- (1) Remove the engine board shield cover (8 screws).
- (2) Disconnect all cables from the engine control board.
- (3) If the main control board is installed, remove it.
- (4) Remove the engine board (7 screws).

- (5) Remove the engine board small (3 screws) and large brackets [2 screws (A) and 4 screws (B)].
- (6) Remove the temperature/humidity sensor board.

8.7.2. Sub Fuser Fan and Sub Fuser Fan Duct

- (1) Remove the sub fuser fan (2 screws).
- (2) Disconnect the fan cable from the sub fuser fan.
- (3) Disconnect the CMY cable from the CMY motor.
- (4) Remove the sub fuser fan duct (2 screws).

8.7.3. Toner Cartridge Drive Unit, Toner Cartridge Holder and Fuser Fan Duct Assembly

Caution:

In the toner cartridge holder assembly, the toner is stored. Remove or handle the toner cartridge holder assembly, using care that toner is not spilled.

When removing the toner cartridge holder, first remove the toner cartridge drive unit to prevent the toner from spill, then remove the toner cartridge holder.

- (1) Remove the 2 screws from the toner cartridge drive unit.
- (2) Separate the toner cartridge drive unit from the chassis.
- (3) Disconnect the toner empty sensor cable from the toner cartridge drive unit.
- (4) Remove the PC guide (1 screw).
- (5) Remove the 2 screws from the toner cartridge holder assembly.
- (6) Release the bundled cables by unlatching the cable clumper on the toner cartridge holder assembly.
- (7) If necessary, cut the 3 plastic belts to release the toner supply solenoid cable from the bundled cables.
- (8) Remove the toner cartridge holder assembly (see note).

Note:

The toner cartridge holder assembly is fixed to the chassis frame by 4 hooks. When removing the toner cartridge holder assembly, move it in the arrow direction (1) and (2) to release the hooks from the chassis frame.

8.7.4. Paper Pickup Motor and Motor Bracket

- (1) Remove the 2 screws from the paper pickup motor.
- (2) If necessary, disconnect the connector CN22 on the engine board, and cut the plastic belts which bundles the pickup motor cable.
- (3) Remove the paper pickup motor from the paper pickup motor bracket.
- (4) Remove the paper pickup motor bracket (4 screws).
- (5) The paper pickup drive gear can be removed from the paper pickup motor bracket.

8.7.5. Main Drive Unit

Important Notice: Handling of Main Drive Unit

8.7.5.1. Inner Cover, ADU Jam Detection Sensor Board and ADU Detection Sensor

1. Remove the inner cover (2 screws).
2. Disconnect the 2 connectors from the inner cover.
3. Remove the fuser earth plate (1 screw).
4. If necessary, remove the ADU jam detection sensor board and ADU detection sensor.

8.7.5.2. Main Drive Unit

1. Remove the 7 screws, securing the main drive unit.
2. If necessary, disconnect the 2 motor cables.
3. Separate the main drive unit from the chassis.
4. If necessary, disconnect the sensor cable from the main drive unit.

Note: For easy re-installation of the main drive unit

When reinstalling the main drive unit, see the section 8.11 "Paper Feed Unit" and remove a clip and the registration clutch from the paper feed unit.

After reinstalling the main drive unit, reinstalling the registration clutch and a clip to the paper feed unit.

8.7.5.3. Main Drive Unit Disassembly

Notice: Installing CMY Motor

1. The CMY motor must be installed while rotating the CMY motor in the arrow direction, or the main drive unit may not be smoothly installed on the printer because the CMY motor contacts with the paper pickup motor bracket.

2. Make sure that each alignment mark (A) is aligned with the mark (B).
3. If not, remove the CMY motor and adjust the alignment.
Regarding the detailed alignment information, see the body of this section

1. Remove the 4 screws (A) and 7 screws (B).
2. Remove the drive unit bracket (S), bushing and washer from the drive unit.
3. If necessary, remove the Acc. GND spring (1 screw).

1. Remove the feed idle gear, cam gear, PC (Print Cartridge) idle gear (L), etc.

Caution:

When reinstalling the PC (Print Cartridge) Idle Gears, perform the following steps, and make sure that each alignment mark (A) on the OPC Gear is aligned with the mark (B) as shown below (Figure-1).

Step 1) : If the Gears 1~3 are installed, remove them.

Step 2) : Align each mark (A) with the mark (B) by rotating the OPC Gear.

Step 3) : Install the Gears 1~3 in order of gears 1, 2 and 3.

Step 4) : Make sure that each alignment mark (A) is aligned with the mark (B).

1. Remove the CMY home lever, PC home spring and PC home lever.
2. Remove the screw and OPC cam home position sensor board.

**(Notice)**

Make sure that no foreign matter (grease, dust, etc) gets on the surface during re-installation of the OPC cam home position sensor, PC home lever, PC home spring, etc.

1. Remove the 4 E-rings, 4 OPC Gears and 4 DEV. gear assemblies.

Caution:

When exchanging the OPC Gears, the 4 OPC Gears must be exchanged with new 4 gears with the same molding number at the same time, or the poor printed quality may be caused. Regarding to the molding number, the molding number has been marked on the OPC Gear as shown below (Figure-2).

**Notice**

When reinstalling the DEV. Gear Assembly, check the following:

1. Make sure that the grease (OL-HP-500) is applied on the parts (A) and (B).
2. Make sure that the grease (OL-HP-500) is fully applied in the groove.

2. Remove the fuser idle gear (1 E-ring).

1. Remove the drive unit bracket (M) (4 screws).

Notice (see caution) :

Before reinstalling the main drive unit bracket (M), remove the grease from these parts (shafts and bushings).

Caution

After reinstalling the main drive unit bracket, perform the following.

1. Remove the grease from the groove, part (A) and Part (B) of DEV. gear assembly. Remove the DEV. Spring and DEV. Coupling from DEV. gear assembly.

2. Make sure that the DEV. gear drops into the 4 bushing smoothly and the flange of the DEV. gear contacts with the bushing. **If not so (proceed to step 3), this may cause the poor print quality (noise, jitter, etc).**
3. loosen 4 screws, adjust by moving the main drive unit bracket (M), and repeat the above step 2.

4. After checking, reassembly the DEV. gear assembly, reapply the grease to the DEV. gear assembly and reinstall it.

1. Remove the BK change gear with solenoid (1 screw).
2. Remove the CMY change gear, hopper change gear, etc.

1. Remove the screw and tension roller spring from the tension roller bracket.
2. Remove the tension roller, Acc. (Accumulator Unit) pulley gear, Acc. pulley gear flange, feed pulley gear, feed pulley gear flange and feed belt.

8.7.6. Bias Unit

Before performing the following steps, remove the toner cartridge holder, toner cartridge drive unit, paper cassette drive motor bracket, engine control board, sub fuser fan and main drive unit.

- (1) Disconnect the connectors CN2 and 3 on the high voltage board (see section 8.14 "High Voltage Board and Reg. Thermistor Sensor").
- (2) Remove the 1 screw from the earth plate.
- (3) Remove the 2 screws.
- (4) Remove the bias unit from the chassis.

8.7.7. Power Supply Fan Motor and PSU Fan Motor Duct

Before performing the following steps, remove the toner cartridge holder, toner cartridge drive unit, paper cassette drive motor bracket, engine control board, sub fuser fan and main drive unit.

- (1) Disconnect the fan motor cable from the fan motor.
- (2) Remove the fan motor (2 screws).
- (3) Remove the fan motor duct (2 screws).
- (4) If necessary, cut the plastic belt and separate the bundled cable with the core from the fan motor duct.

8.8. LSU (Laser Scanning Unit)

Before performing the following steps, remove the left, top and rear covers (see section 8.5 “Rear, Left and Top Covers”).

- (1) Remove the LSU earth plate (4 screws).
- (2) Remove the 3 LSU screws from the LSU.
- (3) Separate the LSU from the printer.
- (4) Disconnect the 3 connectors from the LSU.

8.9. Paper Exit

Before performing the following steps, remove the parts that are listed below:

1. all covers (see sections 8.3, 8.4 and 8.5)
2. Paper Pickup Motor Bracket (see section 8.7.4 “Paper Pickup Motor and Motor Bracket”)

- (1) Remove the 2 screws.
- (2) Disconnect the 2 connectors.
- (3) Remove the inner cover.
- (4) If necessary, remove the ADU (Automatic Duplex Unit) detection sensor and ADU jam detection sensor board from the inner cover.

- (5) Remove 3 screws from the paper exit gear cover and 1 screw from the earth lead terminal.
- (6) Disconnect the connector CN26 on the engine board (see section 8.7.1 "Engine Control and Temperature/Humidity Sensor Boards").
- (7) Remove the paper exit gear cover, gears and switching lever from the chassis.

Note:

When reinstalling the gears on the paper exit gear cover, see the following figure.

Caution:

The rotation switching gear (A) differs from the gear (B) in the gears teeth shape. For reinstalling these gears properly, see the following Figure-1.

- (8) If the earth lead and screw are installed, remove the screw to free the earth lead from the printer chassis.
- (9) Remove a screw from the paper exit sub assembly.
- (10) Remove the paper exit roller and exit restraint levers by moving it in the direction of arrow [(1), (2)].

- (11) Remove the paper exit sub assembly.

- (12) Remove the paper full sensor and sensor lever spring.
- (13) Remove the paper Full sensor board.
- (14) Disconnect the cable from the sensor board.
- (15) If necessary, disconnect the connector CN17 on the engine control board.

(from CN17 on engine control board)

8.9.1. Disassembly of Paper Exit Sub Assembly

- (1) The pinch rollers (A), pinch rollers (B), pinch roller springs, etc., can be removed from the paper exit roller holder.

8.10. IH (Inductive Heater) Unit

Before performing the following steps, remove all covers and fuser unit.

Caution: Handling of the IH Unit

When turning on the IH unit, the current (approx. 12 Arms: 100V AC Power) flows in the IH unit. For safety, observe the following:

If not necessary, don't remove the plastic and metal covers from the IH unit.

Don't loosen or remove any component (nuts, screws, fasten terminals, etc.) from the IH coil unit.

The current (approx. 12 Arms: 100V AC Power) flows in the IH coil unit. The following nuts and screws connect the IH cable to the IH coil & thermostat cable. The thermostat cables are connected to the thermostats by the screws or the fasten terminals.

For protection from smoke, fire and other hazards, don't loosen (or remove) any component (nuts, screws, fasten terminals, etc.) on (from) the IH coil unit.

Nuts and Screws :

Don't loosen or remove any component (nuts, screws, fasten terminals, etc.) on (from) the IH coil unit.

The IH cable is connected to the IH coil and thermostats by the nuts, screws and fasten terminals. When the IH unit is turned on, the current (approx. 12 Arms : 100V AC Power) is supplied to the IH coil and thermostats through the IH cable & thermostat cables. If loose (or removed) these nuts, screws and fasten terminals, the contact resistances at these connections increases. This will generate dangerous intense heat at these connections when turning on the IH unit. As a result, the IH unit (or printer) may emit smoke or can cause a fire at the worst. Don't remove or loosen any component from (on) the IH coil unit. If removing or loosening is done, replace it with a new IH unit for servicing or repairing.

- (1) Remove the interlock switch cover (3 screws).
- (2) Remove the IH cable shield cover while unlatching the hook from the printer chassis using a flat-blade screw driver (1 screw and 1 hook) (see figure-1).
- (3) Remove the protect cover while pushing softly on the hook using a small pin and moving it in the arrow direction (1 screw and 1 hook) (see figure-2).
- (4) Disconnect 2 connectors from the IH power supply board.

Note:

When rewiring the IH cable, the part with the white color mark of the IH cable must be positioned between the projections (A) and (B) as shown in the figure-3.

- (5) Remove the IH harness cover (1 screw).
- (6) Remove the IH unit (1 screw and 1 washer) while pulling out the IH harness cable through the opening.

Note:

The IH unit is engaged with the chassis frame by the projection. When removing the IH unit from the chassis, slide the IH unit in the arrow direction.

Caution 1:

When handling the IH unit, do not push or damage the surface of the thermostat, or the thermostat may not operate properly.

Caution 2:

When rewiring the IH cable or reinstalling the IH unit, make sure that the IH unit moves smoothly inside [Arrow (A) direction in the following figure].

- (7) Remove the IH shield cover while releasing the 2 hooks from the chassis (1 screw).

8.11. Paper Feed Unit

Before performing the following steps, remove the rear cover, left cover and front door.

- (1) Remove the clip.
- (2) Slide out the registration clutch and registration roller joint gear.

Note:

When reinstalling the registration clutch, opening (A) of registration clutch must be aligned with hook (B).

- (3) If necessary, disconnect the connector CN20 on the engine board (see section 8.7.1 "Engine Control and Temperature/Humidity Sensor Boards").

- (4) Remove the 2 screws.
- (5) Disconnect the connectors CN18 and CN19 on the engine board (see section 8.7.1 "Engine Control and Temperature/Humidity Sensor Boards").
- (6) Remove the paper feed unit while pulling out the cable through the opening of chassis.

Note: Wiring of Paper Feed Unit Cable**8.11.1. Paper Feed Unit Disassembly**

- (1) Remove the pickup gear and inner gear (B) while unlatching the gear hook.
- (2) The inner gear (A), outer gear and gear can be removed.
- (3) Remove the plastic washer and ratchet arm from the gear bracket.
- (4) Remove the feed gear, idle gear and bushing.
- (5) Remove the screw and gear bracket.
- (6) Remove the pickup solenoid.

- (7) Remove the bushing (B) from the pickup roller shaft.
- (8) Remove the bushing (A) while unlatching the bushing hook from the pickup roller shaft.

- (9) Remove the 2 pickup roller assemblies from the pickup roller shaft by sliding it in the arrow direction while unlatching the hook from the groove of pickup roller shaft.
- (10) Remove the pickup roller shaft with the 2 pins.

- (11) Remove the 2 springs from the paper feed unit frame.
- (12) Remove the registration roller, registration pinch roller and 2 bushings.
- (13) Remove the paper empty/registration sensor board.
- (14) Remove the registration sensor lever and lever spring.
- (15) Remove the paper empty sensor lever.
- (16) If necessary, remove the varistor.

- (17) The registration paper guide assembly is held in place by the 2 support tabs (see Figure-1). While unlatching the registration paper guide assembly from the support tabs, remove it from the paper feed unit frame.
- (18) Remove the 2 bushings from both end of paper feed roller, then paper feed roller from the paper feed unit frame.

- (19) Remove the registration paper guide and paper guide spring from the registration paper guide assembly.
- (20) After removing the 2 pinch roller spring, slide out the pinch roller shaft in the arrow direction.

8.12. Power Supply Unit (Power Supply Board and IH Power Board)

Before performing the following steps, remove the rear cover, right cover, left cover, top cover and accumulator unit.

- (1) Remove the screw from the protect cover.
- (2) Slide out the protect cover in the Arrow (B) direction while pushing softly the hook using a small pin.
- (3) Disconnect the IH cable from the power supply board.
- (4) Remove the 13 screws and earth plate.
- (5) Slide out in the arrow (1) direction while disconnecting the 4 connectors.

8.12.1. Power Supply Unit Disassembly

- (1) Separate the power supply shield cover from the power supply base plate (10 screws).

- (2) Disconnect the 2 cables.
- (3) Remove 7 screws (B).
- (4) Remove the power supply board.
- (5) Remove the 5 screws (C), then the IH power supply board.

8.13. Main Control Board

- (1) Remove the 2 screws.
- (2) Slide out the main control board with the ROM board.

8.13.1. Main Control Board Shield Covers

Before performing the following steps, remove all covers, power supply unit and engine board shield cover.

- (1) Remove the screw (A).
- (2) Remove the 4 screws (B).
- (3) Remove the LSU earth plate.
- (4) Remove the 5 screws (C), 2 screw (D) and release the cables from the clamber, then remove the main control board shield cover assembly.
- (5) Remove the 10 screws.
- (6) Separate the main board shield cover from the main board shield base cover.
- (7) Remove the main board guide rail from the main board shield base cover.

8.14. High Voltage Board and Reg. Thermistor Sensor

Before performing the following steps, remove all covers, power supply unit, main control shield cover assembly and engine board shield cover.

- (1) Remove the 2 screws (A) and 3 screws (B).
- (2) Separate the PC earth spring and high voltage unit (consists of high voltage board, high voltage board shield cover, etc) from the chassis.
- (3) Disconnect the 4 connectors.
- (4) Separate the high voltage board from the high voltage board shield cover (4 screws (C)).

8.15. Accumulator Tension Unit

Before performing the following steps, remove rear cover, left cover, top cover, black print cartridge, color print cartridge and Acc unit.

- (1) Open the right cover.
- (2) Open the print cartridge holder.
- (3) Remove the 2 screws.
- (4) Disconnect the connectors CN14, 24 and 25 on the engine control board (see section 8.7.1 "Engine Control and Temperature/Humidity Sensor Boards".).
- (5) Remove the accumulator tension.

Note:

The accumulator cables are wired through the opening of the chassis and connected to the 3 connectors CN14, 24 and 25 on the engine control board. Remove the accumulator tension unit, using care that the cables are not damaged.

Notice for reinstalling Acc. Tension Unit

Note 1: Wiring of Accumulator Tension Unit Cables

When reinstalling the accumulator tension unit in the printer, feed the accumulator tension unit cables through this opening to the engine control board.

Note 2: Gap between chassis frame and Acc. tension unit

A gap between the chassis frame and Acc. tension unit must be "0" to prevent damage to the Acc. tension unit base in the Acc. tension unit. Tighten the screws while pushing the Acc. tension unit in the arrow direction after reinstalling the Acc. tension unit, then make sure that there is no gap between the Acc. tension unit and chassis frame.

8.15.1. Accumulator Tension Unit Disassembly

- (1) Remove the FTR cam slider guide with damper (1 screw).
- (2) Remove the FTR cam slider (2 screws)

- (3) Remove the 5 springs.
- (4) Remove the 2 E-rings from both end of the sub shaft, and slide out the sub shaft.

- (5) Remove the plastic washer and E-ring from both end of the cam shaft.
- (6) The WTC Drive Cam, WTC Outer Gear, WTC Planetary Gear, etc., can be removed from the cam shaft.

- (7) Remove the cam shaft assembly.

- (8) Remove the 2 E-rings from both ends of cam shaft.
- (9) The FTR (First Transfer Roller) Cam (R), FTR Cam Link (R), etc., can be removed from the cam shaft.

Caution:

When reassembling the cam shaft, the 4 cams and home tab must be aligned as shown below (Figure-2).

- (10) The changer solenoid, changer lever, changer solenoid spring, etc., can be removed from the accumulator tension unit base easily.

8.16. Print Cartridge Unit Holder

Before performing the following steps, remove rear cover, left and top covers.

When handling and servicing the Print Cartridge Unit Holder

- Do not handle part (A), or poor print quality will occur.
- Do not loosen or remove any screws on the print cartridge unit holder, or poor print quality may occur.
- When exchanging the print cartridge unit holder with a new part, a skew adjustment is needed. Refer to section 11.3 "Skew Adjustment".

- (1) Open the right cover.
- (2) Release the 2 tabs by moving it in the arrow direction.
- (3) Remove the 2 screws and print cartridge unit holder assembly.

8.17. Fuser Fan Motor

Before performing the following steps, remove rear, left and top covers.

- (1) Open the right cover.
- (2) Remove the screw and fuser fan motor from the chassis.
- (3) Remove the insulation sheet and then disconnect the fan cable from the fan motor.
- (4) Disconnect the connector CN44 on the engine control board (see section 8.7.1 "Engine Control and Temperature/Humidity Sensor Boards") and remove the fuser fan cable from the chassis.

8.18. Front Door Open Detection and Right Cover Open Detection Switches

Before performing the following steps, remove the rear cover, right cover, top cover and front door.

- (1) Remove the 3 interlock cover screws and interlock cover.
- (2) Disconnect the cable (A), and remove the front door open detection sensor.
- (3) If necessary, the cable (A) connector CN7 on the engine control board (see section 8.7.1 "Engine Control and Temperature/Humidity Sensor Boards").
- (4) Disconnect the cable (B) from the power supply unit [see section 8.12 "Power Supply Unit (Power Supply Board and IH Power Board)].
- (5) Disconnect the cable (C) connector CN35 on the engine control board (see section 8.7.1 "Engine Control and Temperature/Humidity Sensor Boards").
- (6) Remove the 2 screws and safety interlock switches from the interlock switch bracket.
- (7) Remove the screw and interlock switch bracket.

8.19. MPT (Multipurpose Print Tray) Home Position Sensor and MPT Paper Detection Sensor Boards

Before performing the following steps, remove the left, top cover and rear covers.

- (1) Remove the paper pickup motor bracket screw.

- (2) Remove the 2 screws from MPT sensor cover.
- (3) Remove the MPT sensor cover.
- (4) Remove the MPT home position sensor and MPT paper detection sensor boards.
- (5) Disconnect the MPT home position sensor and MPT paper detection sensor cables.

8.20. Waste Toner Cartridge Full Sensor

- (1) Open the right cover.
- (2) If the waste toner cartridge is installed, remove it.
- (3) Remove the 2 screws and waste toner cartridge right holder.
- (4) Disconnect the cable from the waste toner cartridge full sensor board.

8.21. Standard Paper Cassette

- (1) Unlatch the hook from the delay pad holder assembly by moving it in the arrow (1) direction.
- (2) Remove the delay pad holder assembly by turning it in the arrow (2) direction.

- (3) Remove the delay pad holder assembly from the cassette.

- (4) Slide out the pickup roller holder assembly from the pickup roller shaft while unlatching the pickup roller hook from the pickup roller shaft.

- (5) Remove the gear cover (2 screws), sub tray protector and protector spring.
- (6) Remove the gear spacer, idle gear, roller position arm, MPT cam gear, right cam and pin.
- (7) Remove the pickup roller shaft with gear and bushing.

- (8) Remove the MPT upper plate (3 screws).
- (9) Remove the upper cassette paper chute while unlatching the 2 hooks.
- (10) Remove the left cam while unlatching the hook from the cam shaft.
- (11) Remove the cam shaft and bushing.

Note:

When reinstalling the upper cassette paper chute, the projection (A) must be aligned with the part (B).

- (12) Remove the cassette gear bracket (2 screws).
- (13) Remove the paper exit sensor lever.

- (14) Remove the holder spring and MPT paper holder with left & right paper guides.
- (15) The tray cover, paper tray and paper tray base can be removed from the cassette.

Note 1 : Removing the paper tray (see figure-1)

Slide out the paper tray in the arrow (2) direction while pressing the part (1) of paper tray in the arrow (1) direction.

Note 2 : Removing the paper tray base (see figure-1)

Move the paper tray base in the arrow (4) direction while raising the part (3) of paper tray base in the arrow (3) direction.

- (16) Release the corner separator from the hook, then remove the corner separator by moving it as shown Figure-1.
- (17) Raise the cassette base plate in the arrow (3) direction.
- (18) Slide the cassette base plate in the arrow (4) direction, and remove it.
- (19) Remove the 2 springs.

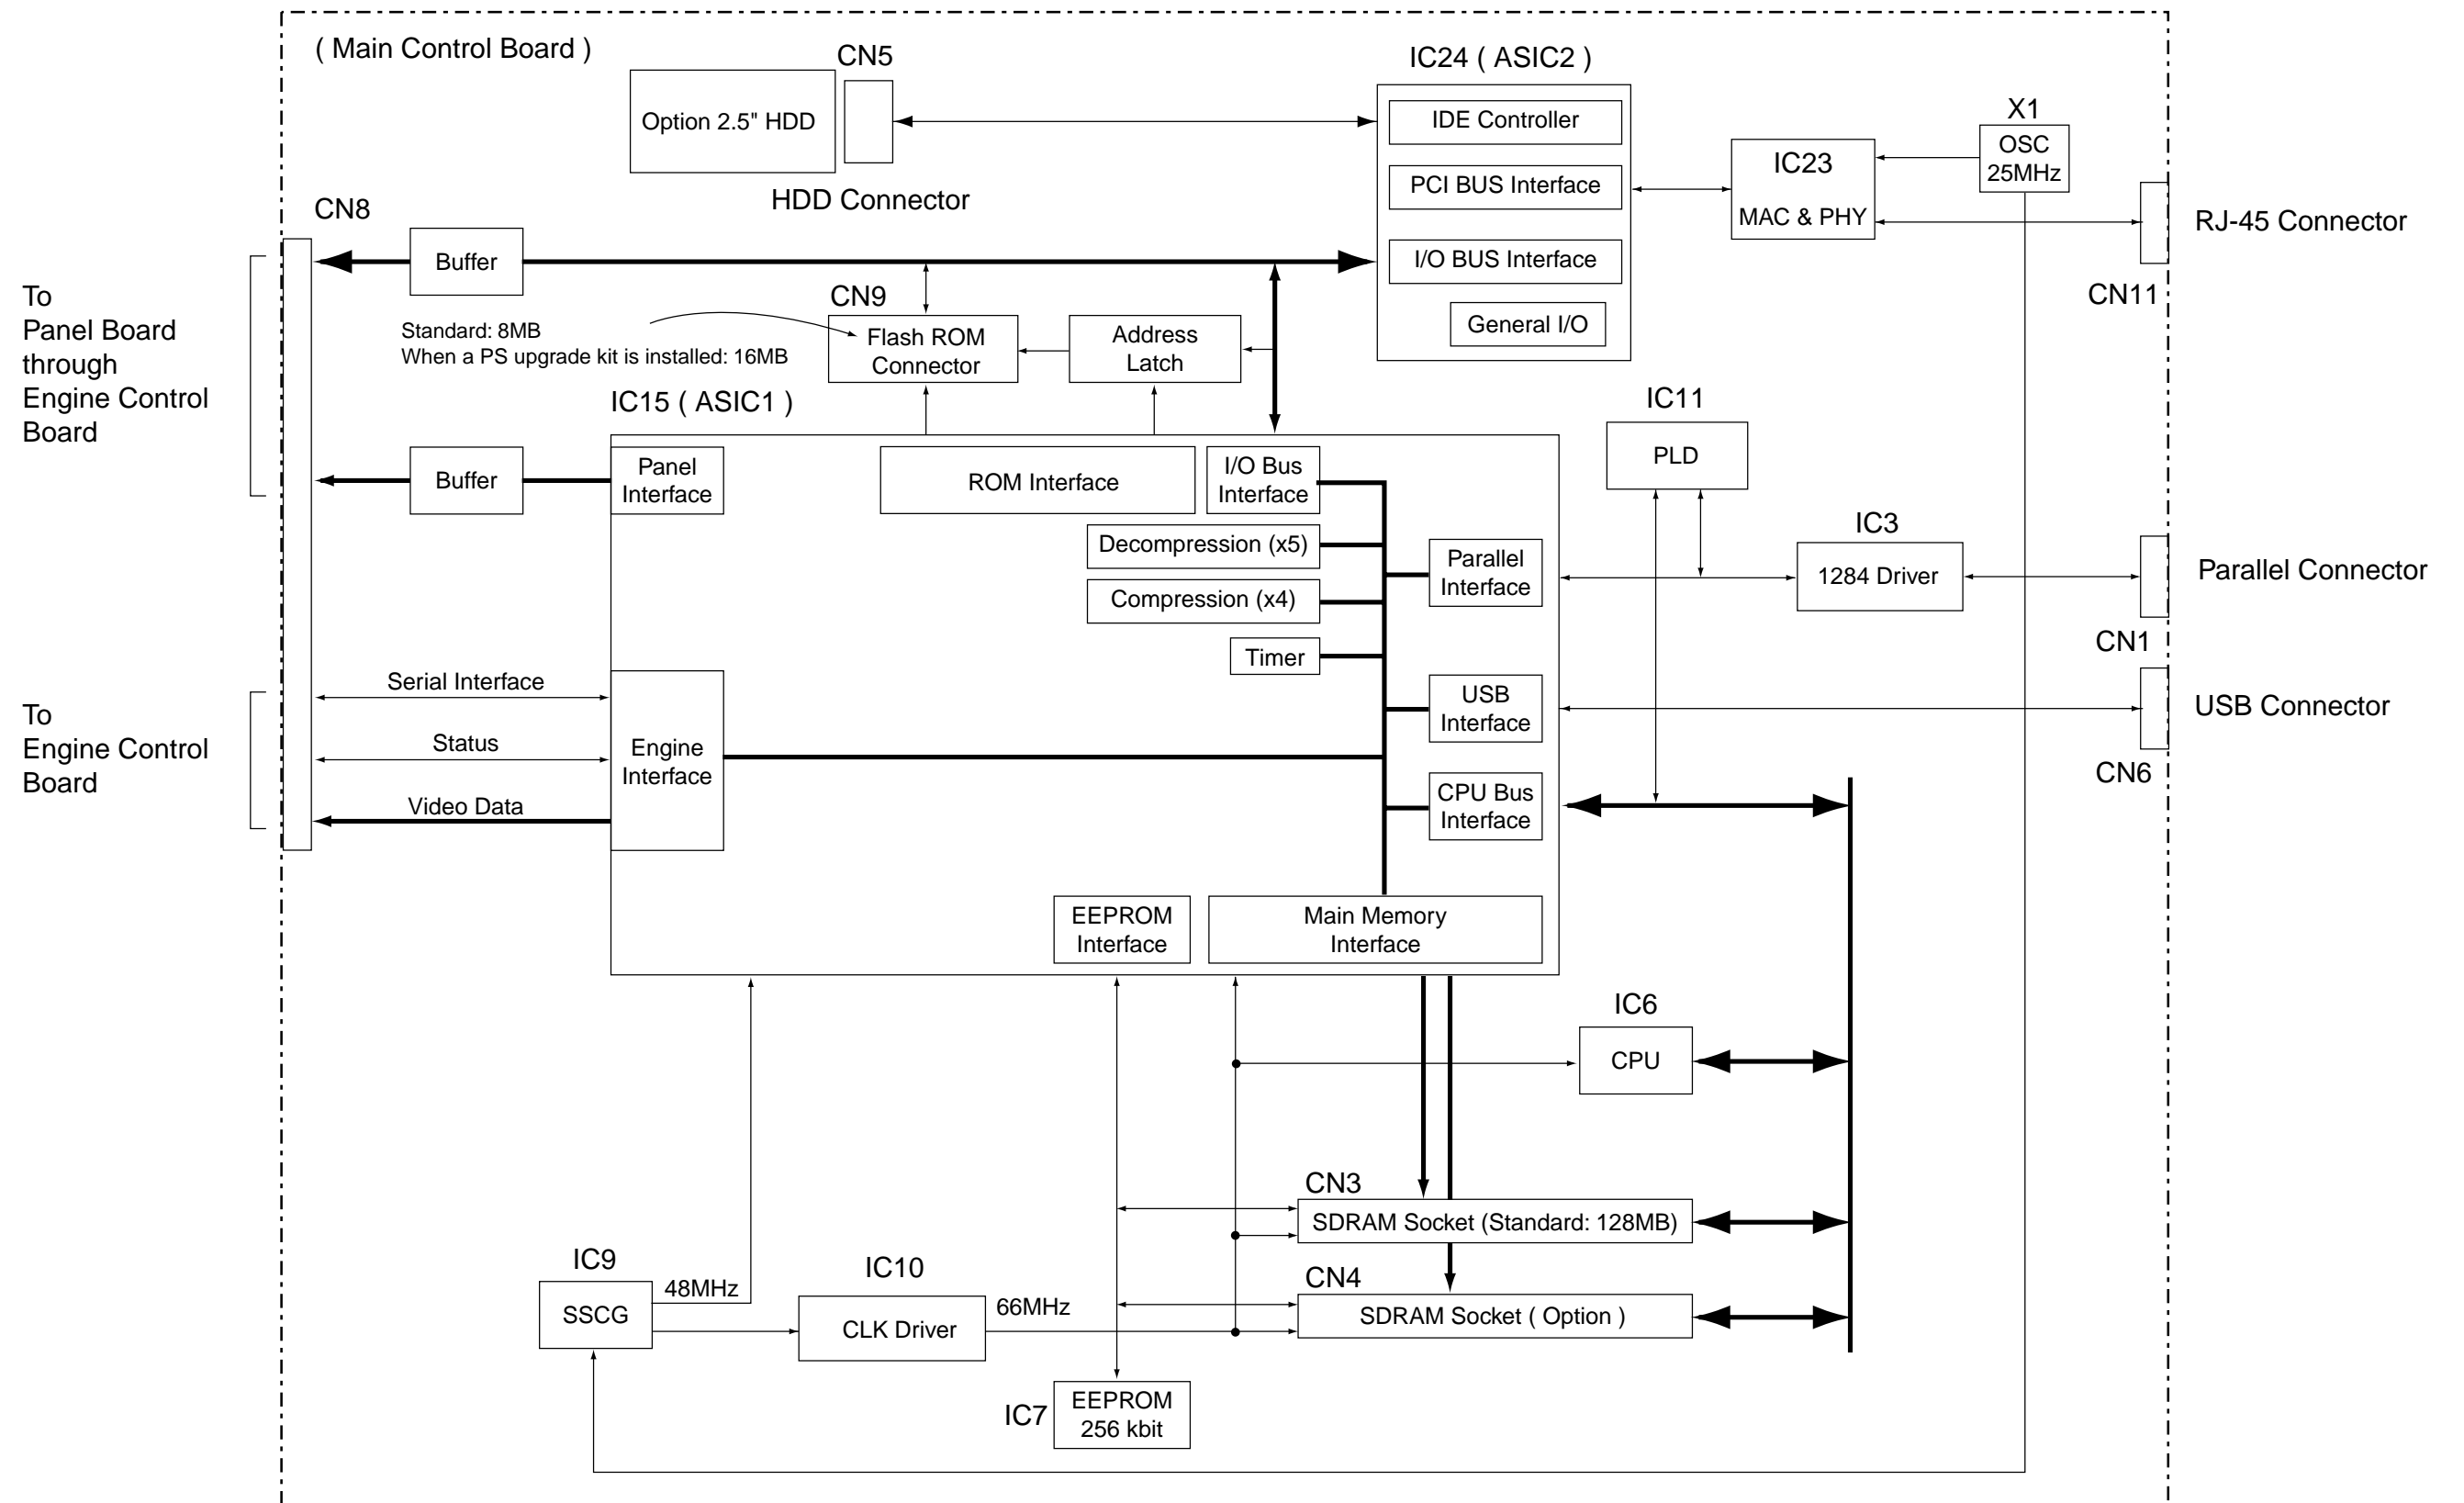

- (20) Remove the paper guide (R) and paper guide (L) by moving each paper guide as shown arrows (1) and (2).
- (21) Remove the screw, pinion gear and 2 racks.

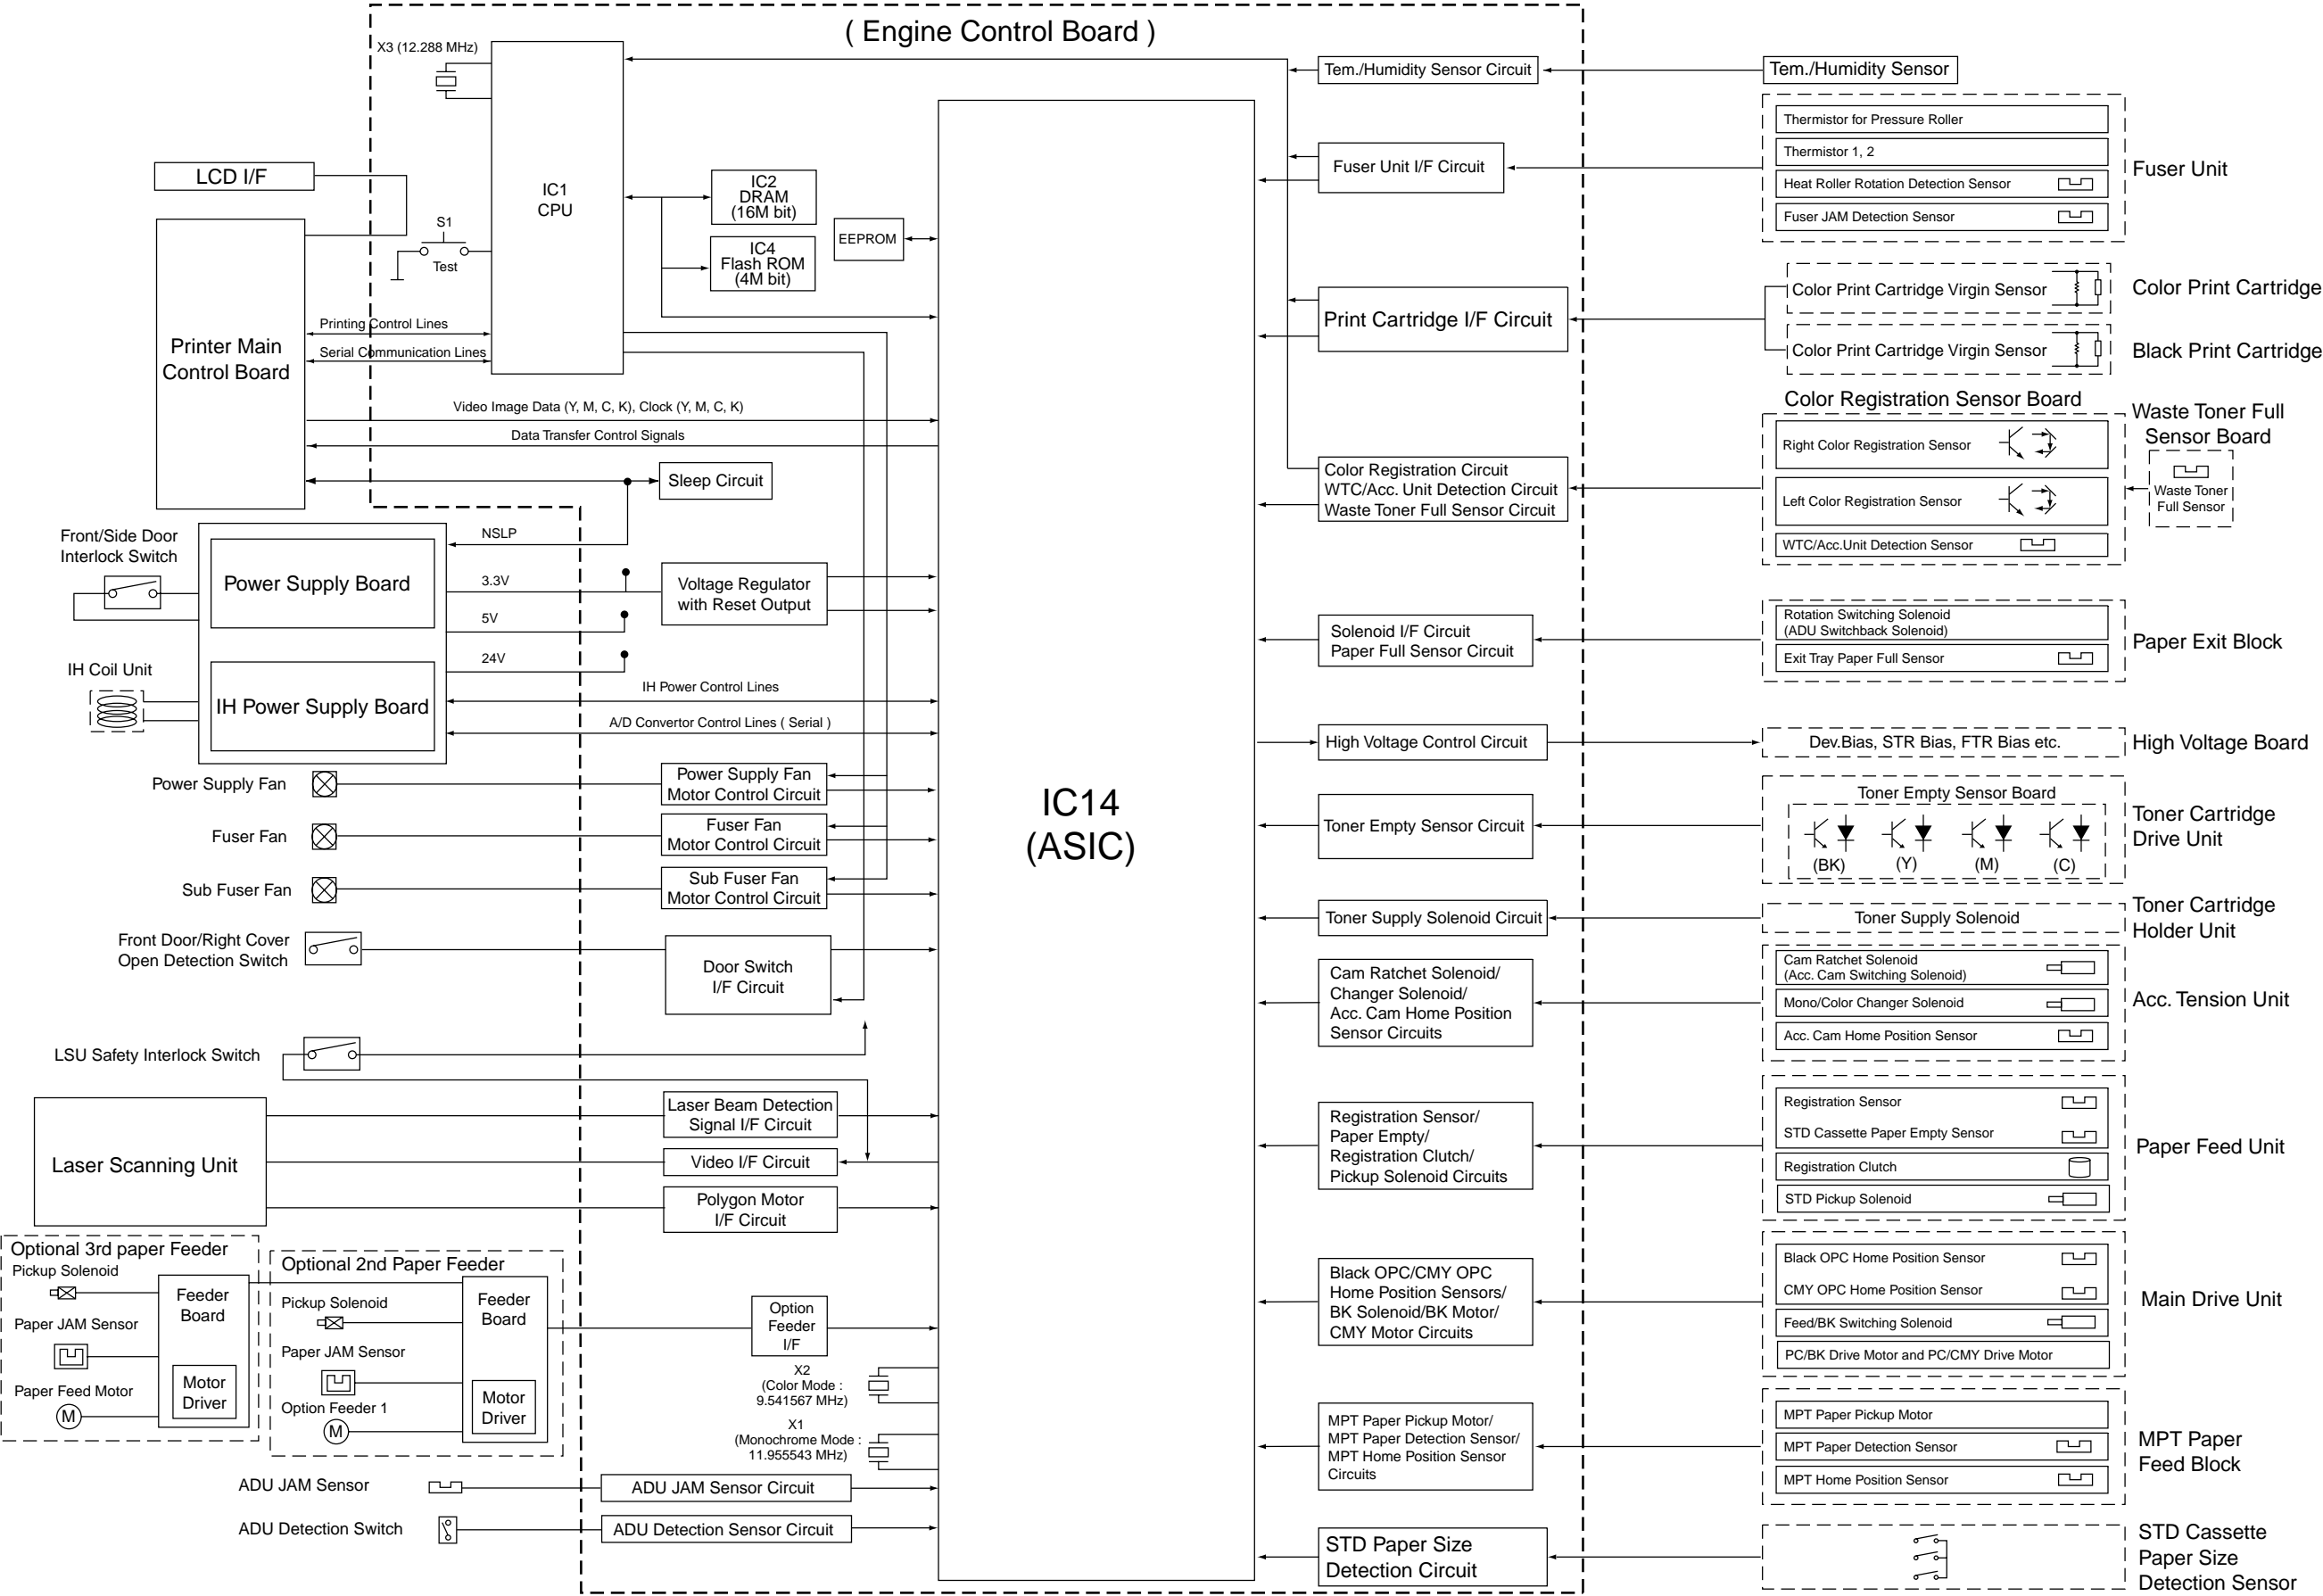

9 Block and Connection Diagrams

9.1. Block Diagram

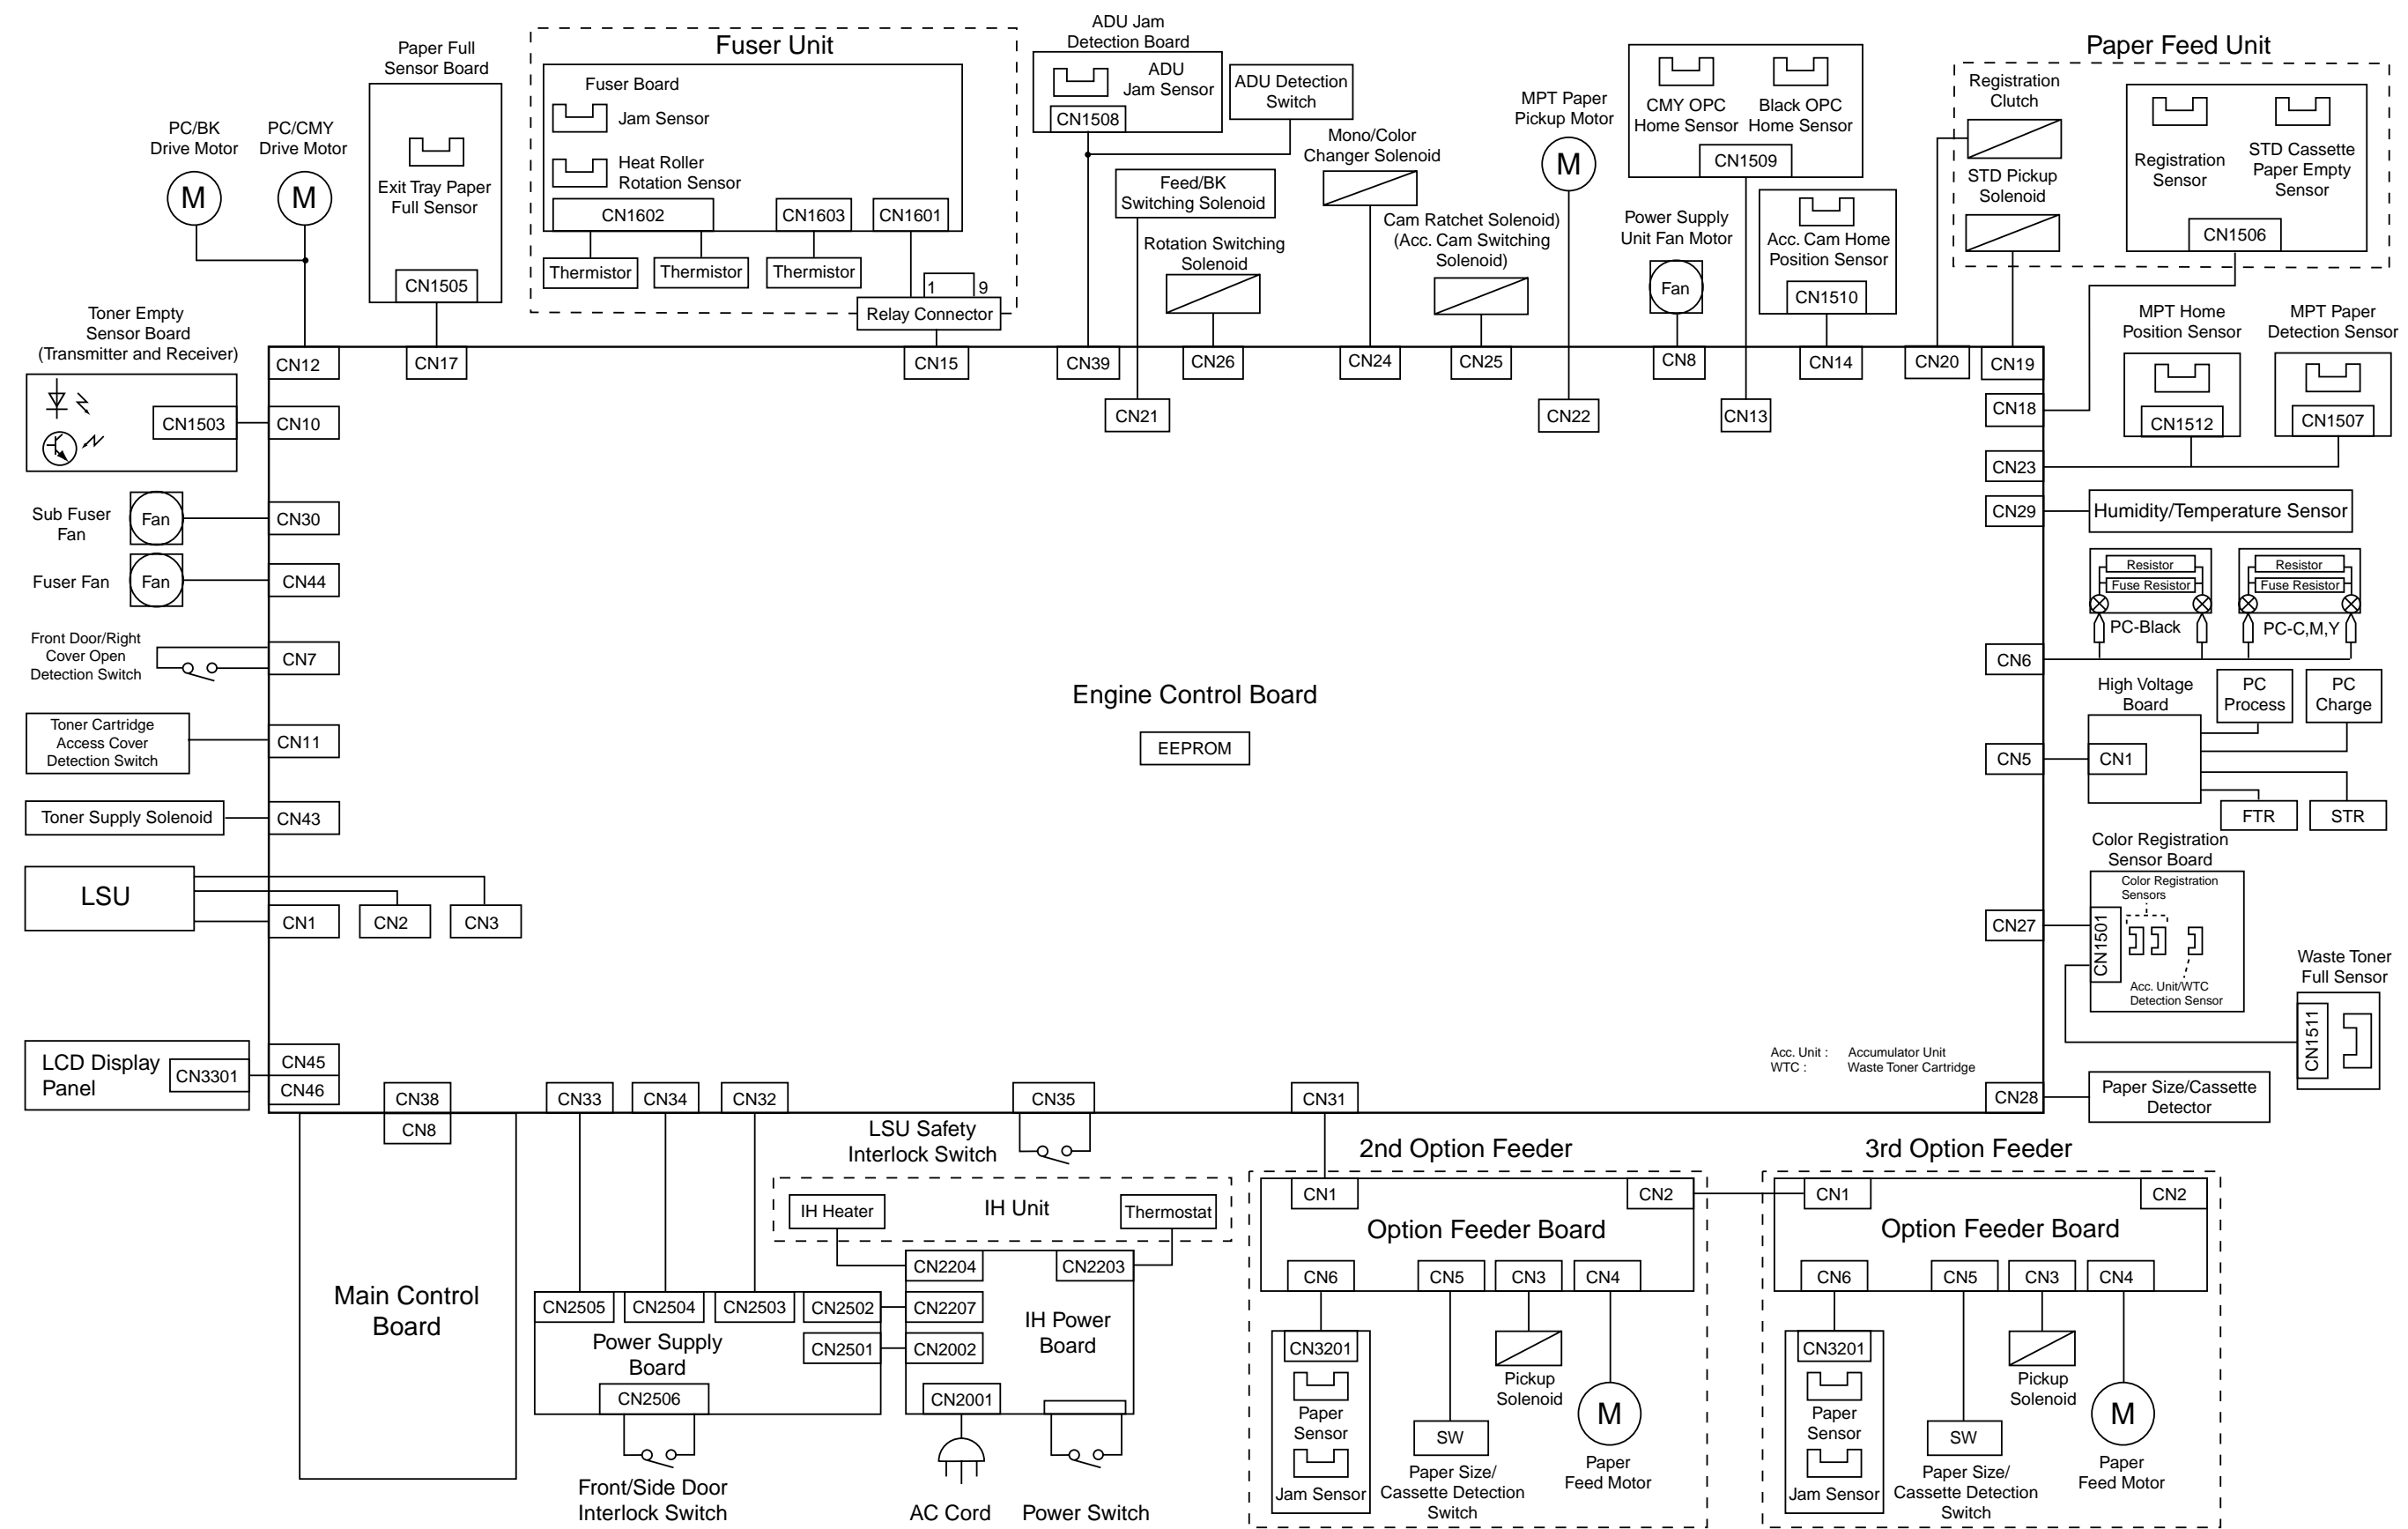

9.1.1. Printer Main Control Board Block Diagram

9.1.2. Engine Control Board Block Diagram

9.2. Connection Diagram

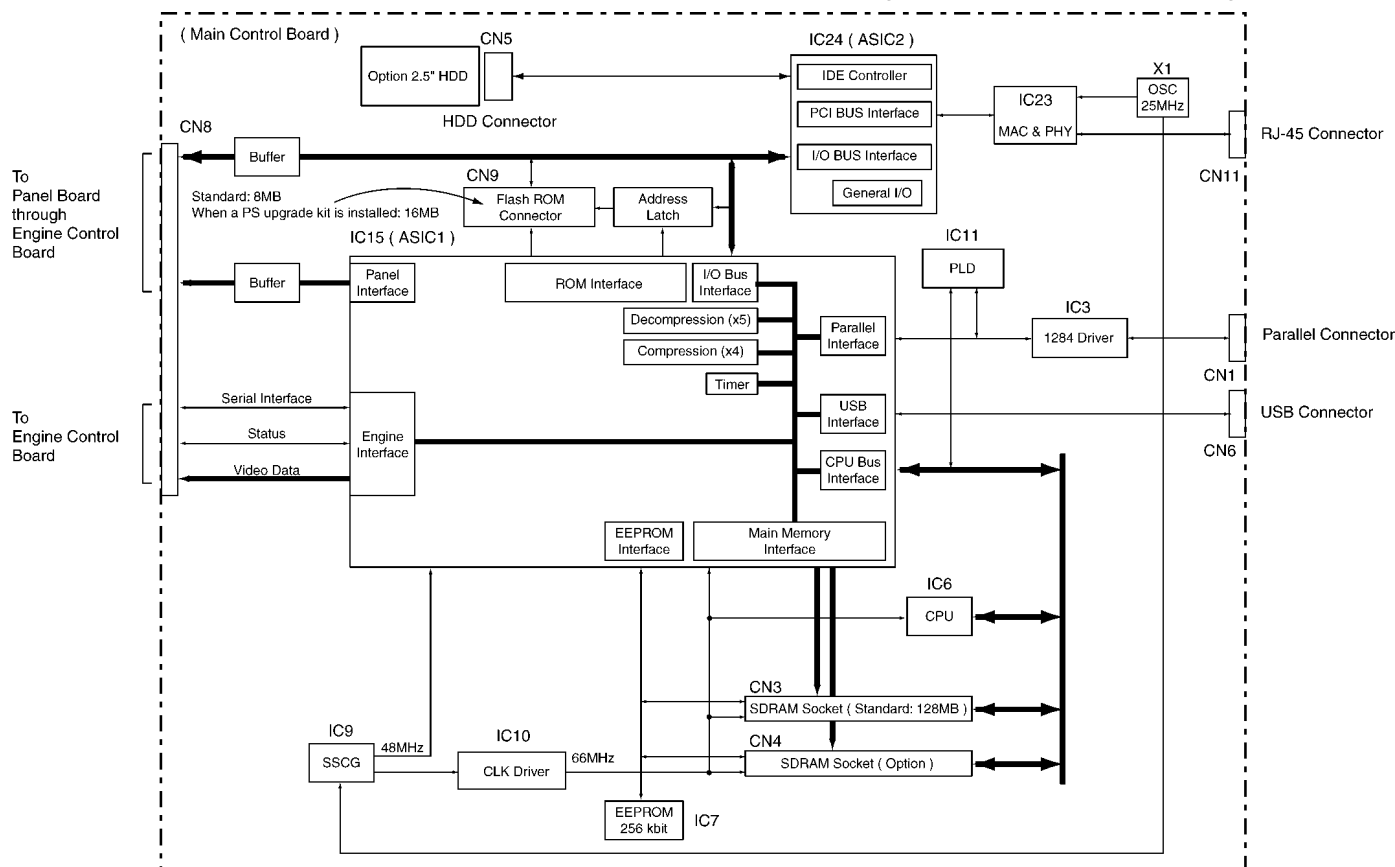

10 Electrical Circuit General Description

10.1. General Description

10.1.1. Printer Main Control Board General Description

The printer main control board consists of CPU (IC6), ASIC1 (IC15), ASIC2 (IC24), NW control LSI (IC23), main memory (CN3, CN4: SO-DIMM), program memory (CN9: ROM) and hard disk (optional HDD).

The printer main control board receives the printing data (PCL or PS) from the host computer through the 10/100Base ethernet interface (RJ-45 connector), USB interface or parallel interface. The printer main control board recognizes the type (PCL or PS) of data, creates the image data from the received data, compresses the image data, expands the compressed image data to the RAW bitmap data (decompression), and outputs the bitmap data (video data) to the engine control board as the printing data.

<ASIC1>

ASIC1 (IC15) that is controlled by CPU is the core on the printer main control board. The followings are the main function:

CPU Bus Interface

ASIC1 is connected to CPU (IC6) and main memory (SO-DIMM) by the CPU bus. The CPU bus interface controls the CPU bus.

Main Memory (SDRAM) Interface

This interface controls the main memory consists of the SDRAM.

IO Bus Interface

This interface controls the IO bus that communicates with ASIC2, flash ROM and control panel.

Parallel Interface

This is the parallel interface for communicating with the host computer.

USB Interface

This is the USB interface for communicating with the host computer.

Engine Interface

This outputs the video data to the engine control board while synchronizing with the synchronizing signal from the engine control board.

EEPROM Interface

This is for communicating with EEPROM.

Compression

This is for compressing the RAW bitmap data for cyan, magenta, yellow and black.

Decompression

This block consists of 5 decompression blocks. One is for pre-rendering to print. The remaining 4 blocks is for color compressed bitmap data (cyan, magenta, yellow and black). The compressed data is expanded to the bitmap data by this block.

Timers

This block is for general purpose 35bit timer. There are 3 timers.

<ASIC2 (IC24)>

ASIC1 (IC15) that is controlled by CPU is the core on the printer main control board. The following are the main functions.

IO Bus Interface

This is the bus for communicating between ASIC2 and ASIC1 (IC15). This interface communicates between ASIC1 and ASIC2 using the synchronizing clock transferring method. The frequency of synchronizing clock is 33 MHz.

PCI Interface

This is the bus for communicating 10/100 Mbps Ethernet controller IC23 (DP83816). This interface conforms with the 32bit/33 MHz 3.3 V PCI Ver 2.2 of PCI standard.

HDD Interface

This is the bus for connecting between ASIC2 and hard disk (HDD). This interface that conforms with the ATAPI3 standard drives the hard disk at the PIO mode 4 and multi word DMA mode 2.

10.1.2. Power Supply Board

This board supplies DC low voltage (+5V, +5VA, +5VB, +3.3V, +24V, +24VA, +24VB, +24VC) to each board.

Voltage	Supply to
+5V	Engine Control Board, Interlock Switch
+5VA	Main Control Board, Engine Control Board (Sleep Circuit), Optional 2nd Paper Feeder Board (sleep circuit)
+5VB	Main Control Board
+3.3V	Engine Control Board
+24V	Interlock Switch
+24VA	CMY Motor, MPT Paper Pickup Motor
+24VB	BK Motor, High Voltage Board
+24VC	Polygon Motor in LSU (Laser Scanning Unit), Power Supply Unit Fan Motor, Sub Fuser Fan Motor, Drive Motor in option feeder, Registration Clutch, 6 Solenoids, 2 Solenoids in option feeder

10.1.3. IH Power Supply Board

This board supplies the power to IH fuser system consists of IH coil and Fuser Unit.

10.1.4. High Voltage Board

This board outputs 12 high voltages used for electronic photographic process. The 12 voltages consists of 2 (VCH: DC -1,000 ~ -1,400V) for C, M, Y and black color OPCs, 4 development bias (VB: DC-100 ~ -300V; AC350Vp-p) for each color, 4 supply bias (VSR: -200 ~ -400V) for each color, FTR bias (FTR: 250 ~ 1,800V), STR bias (STR: 500 ~ 6,200V). The VCH, VB, VSR, FTR and STR voltages are varied by D/A converter setting data from engine control board. If the signal

N is Low, VCH, VB, VSR, FTR and STR are generated. Each of the high voltages are specifically set depending on the print media, selected resolution, printing mode, duplex printing mode, humidity/temperature range of the room. The humidity and temperature ranges are detected by a humidity sensor.

10.1.5. Engine Control Board

This board is the core of the printer engine control. It's major circuit consists of the EEPROM circuit, video interface circuit, high voltage board interface circuit, accumulator control circuit, fuser temperature control circuit, fuser unit interface circuit, option feeder interface circuit, registration clutch control circuit, solenoid control circuits, LSU interface circuit, IH control circuit, toner empty circuit, paper tray sensor circuit, paper feed unit interface circuit, paper eject unit interface circuit, color registration sensor control circuit, etc.

10.1.6. Color Registration Sensor Board

Mainly, this board consists of 2 LEDs and photo sensors. The photo sensors detect the reflected LED light from the accumulator belt surface to calculate the color mis-registration value.

10.1.7. Sensors and Small Boards

The following table explains the check points and signal levels of the sensors and small boards.

No.	Sensor Name /Sensor Board Name	Signal Name	Active	CN No. /Pin No. (Switch)	Position
1	BK Print Cartridge Virgin Sensor Board	PIKFUSEK	Analog	CN6/1	Black Print Cartridge
2	CMY Print Cartridge Virgin Sensor Board	PIKFUSEYMC	Analog	CN6/3	CMY Print Cartridge
3	Front/Right Door Open Detection Switch	DOPEN	H	CN7/1	Right side of Chassis (front side)
4	Black Toner Empty Sensor	EMPK	L	CN10/1	Toner Empty Sensor Board on Toner Cartridge Drive Unit
5	Cyan Toner Empty Sensor	EMPC	L	CN10/2	
6	Yellow Toner Empty Sensor	EMPY	L	CN10/7	
7	Magenta Toner Empty Sensor	EMPM	L	CN10/8	
8	Toner Cartridge Access Cover Detection Switch	TCDOPE	H	CN11/2	Top Cover
9	CMY PC Home Position Sensor	YMCZPH	H	CN13/2	OPC Cam Home Position Sensor Board on Main Drive Unit
10	Black PC Home Position Sensor	KZPH	H	CN13/3	
11	Accumulator Cam Home Position Sensor	ITHOME1	H	CN14/2	Accumulator Tension Unit
12	Fuser Unit Detection Sensor	FSRNON	Analog	CN15/1	Fuser Unit *1 At the printing, this signal alternates between high and low levels. If not so, any troubles may be occurred.
13	Thermistor 1	TH1HIGH	Analog	CN15/4	
14	Thermistor 2	TH2HIGH	Analog	CN15/3	
15	Pressure Roller Thermistor	THFUSE	Analog	CN15/5	
16	Heat Roller Rotation Sensor	ROTATE	H/L ^{*1}	CN15/6	
17	Fuser Jam (Paper Ejection) Sensor	NFSRJAM	L	CN15/7	Paper Full Sensor Board in paper exit block
18	Paper Full Sensor	EXITFULL	H	CN17/3	
19	Paper Empty Sensor	STPNON	H	CN18/2	Paper Empty/Registration Sensor Board on Paper Feed Unit
20	Registration Sensor	NREGSEN	L	CN18/3	
21	MPT Home Position Sensor	MPTHOME	H	CN23/3	Left side of Chassis (front side)
22	MPT Paper Empty Sensor	MPPSEN	L	CN23/5	
23	Waste Toner Full Sensor	TBFUL	H	CN27/8	By Power Switch

No.	Sensor Name /Sensor Board Name	Signal Name	Active	CN No. /Pin No. (Switch)	Position
24	Left Side Color Registration Sensor	SNS_L	Analog	CN27/1	Color Registration Sensor Board
25	Waste Toner Cartridge Detection Sensor	WTB_NON	L	CN27/6	
26	Right Side Color Registration Sensor	SNS_R	Analog	CN27/3	
27	Paper Size Size 1 Switch	STPSZ1	(Table 1)	CN28/1	Rear side of Chassis (paper size detector)

11 Adjustment

11.1. Print Position Calibration

This adjustment is used to set the print position calibration after moving the printer, installing the optional paper feeder, replacing the engine control board or replacing the laser scanning unit (LSU).

1. Turn on the printer and enter the User Mode (or Service Mode).
2. If the User Mode is activated, select "Tray" item menu in the User Mode and press the Enter or Continue button.
3. Select "Position Setting" in the "Tray" item menu (or select "Position Setting" item menu in the Service Mode) and press the Enter or Continue button.
4. Select the Test Print and press the Enter or Continue button.
5. Select the menu which the Print Position Calibration is needed, and press the Enter button. The Test Print is done (see figure-1).
6. Verify that A and B match the values in the following table.
7. If necessary, adjust the Print Position Calibration using "Position Setting" menu in User Mode (or using "Position Setting" item menu in the Service Mode).

(figure-1)

Paper Size	
Any	$A = 96 \text{ dot } (0.16", 4.06\text{mm}) \pm 30 \text{ (} \pm 0.1", \pm 2.54\text{mm) [600dpi]}$ $B = 96 \text{ dot } (0.16", 4.06\text{mm}) \pm 15^* \text{ [600dpi]}$

*

Tray Type	Range
Tray 1, MPT, Duplex	It ranges in size from -0.05" (-1.27 mm) to 0.05" (1.27 mm).
Tray 2, Tray 3	It ranges in size from -0.1" (-2.54 mm) to 0.1" (2.54 mm).

11.2. Color Density Adjustment

This adjustment is used to set the density of the toner applied to the media.

This feature compensates for the changes in density that can occur as environmental conditions change, print cartridges or the accumulator unit age.

1. Print a Color Calibration Test Print Page using the Calib. Test Prn. of Color Calibration menu in the user mode (see section 4.7).

The current density setting for each color is indicated by the line enclosure on the Color Calibration Test Print Page as shown in the following example.

The factory default setting for each color density is 0.

*1CMY Composite Gray is the color mixed cyan, magenta and yellow.

If the color calibration is proper, the CMY Composite Gray is near gray.

2. Compare the current color density settings on the Color Calibration Test Print Page with the color density samples on the Color Calibration Card to see if they match.

Place the Color Calibration Test Print Page on at least 2 sheets of clean white paper in a well-lighted area.

- If they match and CMY Composite Gray is proper, then the color density adjustment is not needed and any operation can be performed.
- If they do not match, go to the next step.

3. Determine which block on the Color Calibration Test Print Page most closely matches the density of the cyan sample on the Color Calibration Card.

Repeat this step for each color.

4. To adjust the density for all colors simultaneously, perform the following.

- Select "Offset" and press the Enter or Continue button.
- Press the Δ / ∇ button to darken/lighten all the colors, then press the Enter button.
- Press the Δ button 5 times and select "Calib.Test Prn."
- Press the Enter button to reprint the Color Calibration Test Print Page.

5. To adjust the density for each color independently, perform the following.

- Select "Cyan" and press the Enter or Continue button.
- Press the Δ / ∇ button to darken/lighten the cyan color, then press the Enter button.
- Press the Enter button and repeat instruction b for each color (Magenta, Yellow, Black).
- Select "Calib.Test Prn." and press the Enter button to reprint the Color Calibration Test Print Page.

The line enclosure reflects the changes made to the settings.

Notes:

- Changes made using Color Calibration are retained until the printer is recalibrated.
- The color density setting affects the average life of the toner.
- Keep the Color Calibration Card for future calibrations.

11.2.1. STR Setting

By adjusting the STR bias using this service mode, the transfer performance adjustment for each media type can be performed.

1. To enter the "Service Mode", turn on the power. Turn on the power while pressing the ▽ and △ buttons at the same time, then keep pressing the ▽ and △ buttons until "Initializing" is displayed.
2. Press the Menu/Exit button, select "STR Setting" by pressing △ / ▽ button, and Enter or Continue button.
3. Select "STR Test Print", press the Enter button, select the media needed the transfer performance adjustment, and then Enter button to print. The color chart as shown in the following is printed.

4. See the print page. If the adjustment is necessary, set the value of STR bias by pressing the △ / ▽ button to adjust the print quality. When the number of STR bias is increased, the Green, Red and Blue colors are highlighted (see fig-1). When the number is decreased, the mottled patterns of light Black, Magenta and Cyan colors are refined (see fig-2).

(Fig-1)

(Fig-2)

5. Reprint and check the page. If necessary, readjust.

11.2.2. Dev. Bias Setting

By adjusting the Dev. bias using this service mode after the color density adjustment, a range of dark & light color adjustment for each following media type is expanded from (-5 to +5) to (-10 to +10). When performing this adjustment, use the following test print pattern, Color Calibration Test Print or user's unique test pattern.

1. To enter the "Service Mode", turn on the power. Turn on the power while pressing the ∇ and Δ buttons at the same time, then keep pressing the ∇ and Δ buttons until "Initializing" is displayed.
2. Press the Menu/Exit button, select "DEV. Bias Setting" by pressing Δ / ∇ button, press the Enter or Continue button, select the "Paper/Other" (or "Transparency") and press the Enter or Continue button.
3. Select "Dev. Test Print", press the Enter button, and then Enter button to print. The color chart as shown in the following is printed.

4. See the print page. If the adjustment is necessary, set the value of Dev. bias by pressing the Δ / ∇ button to adjust the dark & light of color. When the number of Dev. bias is increased, the color becomes the dark. When the number is decreased, the color becomes the light.
5. Reprint and check the page. If necessary, readjust.

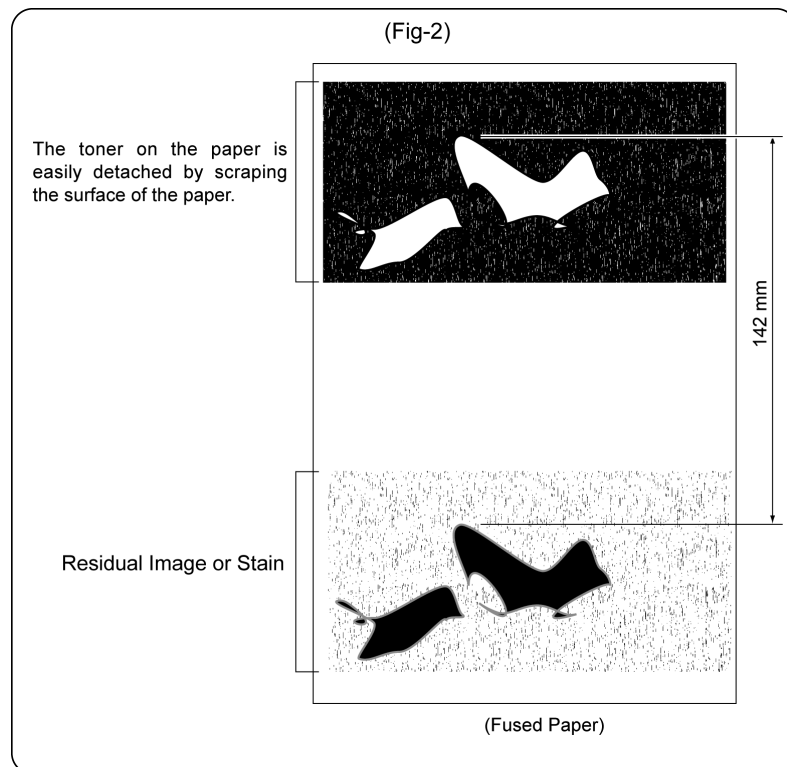

11.2.3. FSR Temp. Setting

1. To enter the "Service Mode", turn on the power. Turn on the power while pressing the ∇ and \triangle buttons at the same time, then keep pressing the ∇ and \triangle buttons until "Initializing" is displayed.
2. Press the Menu/Exit button, select "FSR Temp. Setting" by pressing \triangle / ∇ button, and Enter or continue button.
3. Select the media type by pressing \triangle / ∇ button, and Enter or continue button.
4. Set the value of FSR Temp. Setting by pressing the \triangle / ∇ button. The fusing temperature increases (decreases) by approximately $+1^{\circ}\text{C}$ (-1°C) every $+1$ (-1). If the phenomenon as the example 1 happens, increase the fusing temperature by pressing the \triangle button. If the phenomenon as the example 2 happens, decrease the fusing temperature by pressing the ∇ button. When performing this adjustment, use the following test print pattern or user's unique test pattern.
5. Select "Temp. Test Prn.", press the Enter button, select the media needed the fine temperature adjustment, and then Enter button to print. The color chart as shown in the following is printed. Check the print quality. If necessary, readjust.

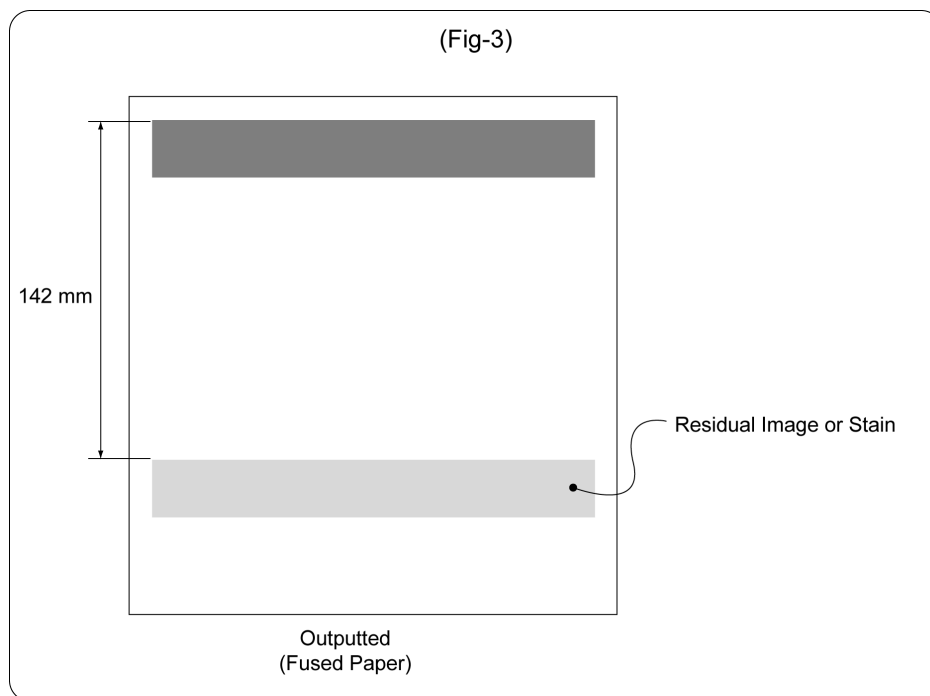

Example**(Example 1) If fusing temperature is not enough:**

If the fusing temperature is not enough to fuse the toner, the toner is easily detached from the paper because the toner is not completely fused to the paper. In particular, a thick part of toner is detached easily. The detached toner from the paper attaches to the fuser belt (see above figure; Fig-1), and the detached toner may be fused to the paper as the residual image (or stain) after one cycle of fuser belt rotation.

**(Example 2) If toner is overheated:**

If the toner is overheated, part of the toner on the paper is transferred to the fuser belt without causing the toner detachment on the outputted (fused paper) as shown below (Fig-3) and the transferred toner will be fused to the paper as the residual image (or stain) after one cycle (142 mm) of fuser belt rotation. In particular, this phenomenon will happen when fusing the image that is made from relatively little toner as a single color (black, magenta, yellow, cyan), half-tone, etc.

The above phenomenon(s) is (are) observed at the following parts on the color chart. When the fuser temperature is high or low, the above phenomenon(s) will occur.

11.3. Skew Adjustment

When performing the following, this adjustment must be done.

- Replace LSU or Print Cartridge Unit Holder
- Reassemble Print Cartridge Holder and reinstall it

11.3.1. Check of Skew

Check of Skew

- (1) Remove the left and rear covers (see section 8.5. Rear, Left and Top Covers).
- (2) Turn on the toner cartridge access cover detection switch by inserting a long main control board screw into the opening as shown below (Fig-1).

- (3) Push the switch S1 (self print button : see the following Fig-2) on the engine control board. The print job is done, and a skew check pattern is printed as shown below (Fig-3).
- (4) Check the skew check pattern using a magnifying glass.
If a black line is in between 3 color lines [Area (A)], it is good. If not so, the skew adjustment must be performed. See section 11.3.2 "Skew Adjustment".

- (5) If the skew is good, reinstall the access panel, left cover, rear cover and long main control board screw.

11.3.2. Skew Adjustment

Skew Adjustment

- (1) Open the right cover.
- (2) Peel the label off the print cartridge unit holder.
Draw (or mark) a line on the print cartridge unit Holder aligning a white color pin as shown below (Fig-4 and Fig-4-1).
- (3) Loosen the 2 screw (A). **[Don't loosen the 2 screw (B), or the black print line skew will be occurred.]**
- (4) Unlatch the 2 green tabs by pulling the tab in the Arrow (C) direction, then release the print cartridge unit holder from the print cartridge by moving it in the Arrow (D) direction.

Fig-4

- (5) Slide the white color print cartridge supporter slightly to the left or right using a small driver as shown below (Fig-5).

Fig-5

- (6) Tighten the 2 screws and latch the print cartridge unit holder.

- (7) Perform the steps (4) and (5) in section 13.3.1 "Check of Skew". Make sure that the black line is in between 3 color lines [Area (A)] as shown below (Fig-6). If the skew is good, reinstall the access panel, left cover, rear cover and long main board screw. If not, repeat the steps (3) ~ (7).

12 Preventative Maintenance

12.1. General

Regularly scheduled cleaning is not necessary for this printer. However, if the printer experiences frequent media jams, clean the pickup rollers.

12.2. Recommended Tools

The following tools are recommended.

- 1) Toner Vacuum Cleaner
- 2) Puff (Air Blower)
- 3) Cleaning water
- 4) Lint-free wipes
- 5) Cotton swabs
- 6) Shipping cover of the Print Cartridge (for Black and Color)
- 7) Isopropyl alcohol (greater than 90% pure)

12.3. Recommend Cleaning

- 1) Turn off the printer.
- 2) Remove the waste toner cartridge.
- 3) Remove the print cartridge.
- 4) Remove the accumulator unit.
Do not touch the accumulator belt surface.
- 5) Remove the fuser unit.
- 6) Slide out the standard paper cassette.
- 7) Clean the paper path.
- 8) Clean all printer rollers, except the 2nd transfer roller, with alcohol-dampened wipes only.
never apply alcohol on the 2nd transfer roller.
- 9) Clean the laser unit windows with puffs of air from the suction bulb.
- 10) Vacuum the interior of the printer.
- 11) Carefully clean the area surrounding the 2nd transfer roller for impacted toner.
 - a. Remove the 2nd transfer roller.
 - b. Vacuum the toner and dust, cleaning the area surrounding the 2nd transfer roller.

12.4. Maintenance Tables

12.4.1. User Maintenance

The following table lists the user replaceable components and the symptoms that may result when they need to be replaced.

Printer Component	Front Panel Message	Average Life *	Symptom
Toner Cartridge	"Low <Color> Toner " Have the <color> toner cartridge available. "TC-* Replace" (* indicates C, M, Y or K) Replace the ** toner cartridge. (** indicates Cyan, Magenta, Yellow or Black)	6,000 pages (Y, M, C, BK)** 3,000 pages (Y, M, C)	Uneven, streaky or mottled color.
Print Cartridge	"PC-* wearing out " Have the * Print Cartridge. (* indicates Color or Black) "PC-* Replace " (* indicates Color or Black) Replace the* Print Cartridge.	15,000 pages (Color, BK) 15,000 pages (Color, BK)	Dark vertical streaks on the print. Dark color spots and streaks in all colors. A wide, light, horizontal band in one place on the page. All colors are faded; fine line detail disappears.
Waste Toner Cartridge	"WTC Full " Have the Waste Toner Cartridge available. "WTC Replace " Replace the Waste Toner Cartridge.	---- 14,000 pages/Full color	
Fuser Unit	"FSR wearing out " Have the Fuser Unit available. "FSR Replace " Replace the Fuser Unit.	99,250 pages 100,000 pages	
Accumulator Unit	"AU wearing out " Have the Accumulator Unit available. "AU Replace" Replace the Accumulator Unit.	99,250 pages 100,000 pages	
Transfer Roller	"TR wearing out " Have the Transfer Roller available. "TR Replace " Replace the Transfer Roller.	99,250 pages 100,000 pages	
MPT Pad	---	30,000 pages	Miss Feed

Note * The rated life expectancy of each consumable is based on printing under specific operating conditions such as page coverage for a particular page size (5% coverage per color at 600 x 600 dpi resolution on A4 size paper).The actual consumable, life will vary depending on its use and other printing variables including page coverage, page size, media type, print resolution, continuous or intermittent printing, number of color planes, ambient, temperature and humidity.

When printing at the High Density, after "Low <Color> Toner "is displayed, a faded print may occur before "TC-* Replace"is displayed.
(* indicates C, M, Y or K)

** The Starter Toner Cartridges shipped with the printer have an average life of approximately 2,500 pages based on an average of 5% coverage of A4 in continuous printing.

12.4.2. Service Maintenance

12.4.2.1. Recommended Maintenance Cycle

Item	Maintenance Cycle	Type of Maintenance
Paper Feed Unit Pickup Roller	Approximately 50,000 pages	Clean
Multi-Purpose Tray Pickup Roller Delay Pad	Approximately 50,000 pages	Clean
Main Unit Paper Chute Registration Roller Inside of the printer *	Approximately 50,000 pages	Clean

* Cleaning is recommended when replacing the Print Cartridge and Accumulator Unit.

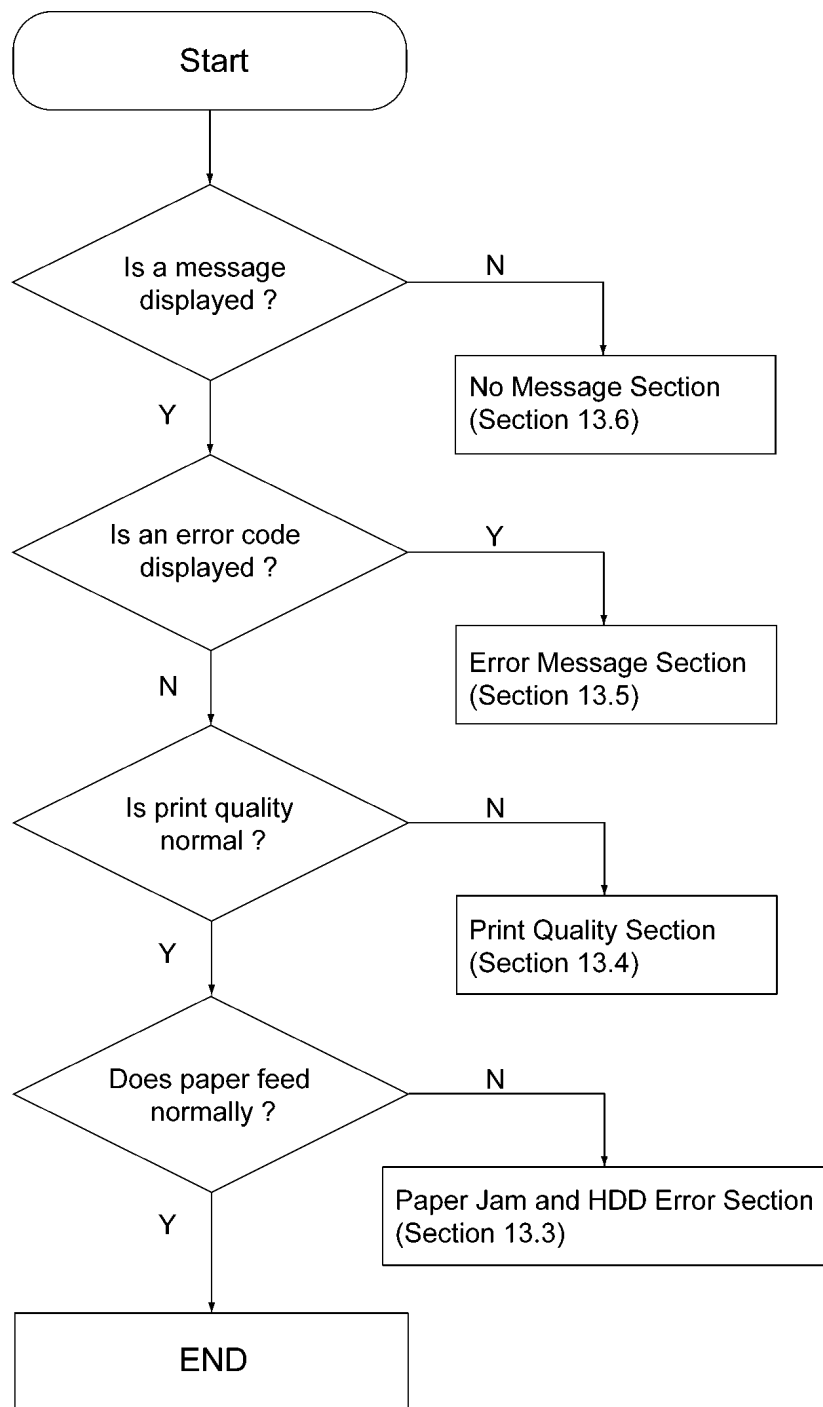

12.4.2.2. Lubrication

Area	Part	Lubricant Part Number	Type of Lubricant
Main Drive Unit	Gear and Gear Shafts	PJOL-YM-103	Grease
Accumulator Drive Unit	FTR Cam (4 pieces)	PJOL-YM-103	Grease
	Planetary Gear Base (B)	PJOL-YM-103	Grease
Paper Exit Roller	Roller Supporting Portion	PJOL-YM-103	Grease

Regarding the lubrication point, refer to the section 14 "Replacement Parts with Lubrication Guide".

13 Troubleshooting

13.1. Initial Troubleshooting Flowchart

13.2. Warning/Error Message

13.2.1. Warning Message

Message on LCD	Possible Cause	Recovery
Low Cyan Toner	Cyan toner cartridge is almost empty.	Have the cyan toner cartridge available.
Low Magenta Toner	Magenta toner cartridge is almost empty.	Have the magenta toner cartridge available.
Low Yellow Toner	Yellow toner cartridge is almost empty.	Have the yellow toner cartridge available.
Low Black Toner	Black toner cartridge is almost empty.	Have the black toner cartridge available.
WTC Full	Waste toner cartridge is near full.	Have the waste toner cartridge available.
PC-Black wearing out	Black print cartridge is wearing out.	Have the black print cartridge available.
PC-Color wearing out	Color print cartridge is wearing out.	Have the color print cartridge available.
PC-Black Replace	Black print cartridge is worn out.	Replace the black print cartridge.
PC-Color Replace	Color print cartridge is worn out.	Replace the color print cartridge.
AU wearing out	Accumulator unit is wearing out.	Have the accumulator unit available.
TR wearing out	Transfer roller is wearing out.	Have the transfer roller available.
FSR wearing out	Fuser unit is wearing out.	Have the fuser unit available.
TC-C Replace	Cyan toner cartridge is empty.	Replace the cyan toner cartridge.
TC-M Replace	Magenta toner cartridge is empty.	Replace the magenta toner cartridge.
TC-Y Replace	Yellow toner cartridge is empty.	Replace the yellow toner cartridge.
TC-K Replace	Black toner cartridge is empty.	Replace the black toner cartridge.
Tray1 Empty	Tray 1 is empty.	Load media in tray 1.
Tray1 not installed	Tray 1 is not installed.	Install tray 1.
Tray2 Empty	Tray 2 is empty.	Load media in tray 2.
Tray2 not installed	Tray 2 is not installed.	Install tray 2.
Tray3 Empty	Tray 3 is empty.	Load media in tray 3.
Tray3 not installed	Tray 3 is not installed.	Install tray 3.
HDD Full	Hard disk drive is full.	Remove the unnecessary files from the hard disk drive.
HDD I/O Error	HDD I/O Error has occurred.	Perform Check Disk operation in the HDD Maintenance mode. If it still remains, perform Quick Format or HDD Format operation in the HDD Maintenance mode.

13.2.2. User Errors

Message on LCD	Possible Cause	Recovery
Output Tray Full	Output tray is full.	Remove the printed media from the output tray.
Memory Overflow	There is not enough memory in the printer.	Add memory or select a lower resolution in the printer driver.
HDD I/O Error	HDD I/O error has occurred.	Perform Check Disk operation in the HDD Maintenance mode. If it still remains, perform Quick Format or HDD Format operation in the HDD Maintenance mode.
FSR Not Installed	Fuser unit is not installed.	Install the fuser unit.
TC-C Not Installed	Cyan toner cartridge is not installed.	Install the cyan toner cartridge.
TC-M Not Installed	Magenta toner cartridge is not installed.	Install the magenta toner cartridge.
TC-Y Not Installed	Yellow toner cartridge is not installed.	Install the yellow toner cartridge.
TC-K Not Installed	Black toner cartridge is not installed.	Install the black toner cartridge.
WTC Replace	Waste toner cartridge is full.	Replace the waste toner cartridge.
PC-Black Not Installed	Black print cartridge is not installed.	Install the black print cartridge.
PC-Color Not Installed	Color print cartridge is not installed.	Install the color print cartridge.
PC-Black Replace	Black print cartridge is worn out.	Replace Black print cartridge.
PC-Color Replace	Color print cartridge is worn out.	Replace Color print cartridge.
FSR Replace	Fuser unit is worn out.	Replace the fuser unit.
TR Replace	Transfer roller is worn out.	Replace the transfer roller.
AU Replace	Accumulator unit is worn out.	Replace the accumulator unit.
Reset Tray1 Remove MPT Paper	Multi-purpose tray is not in closed position.	Remove media from the multi-purpose tray. Uninstall tray1 and then reinstall it.
Front or Right door Open	Front or right side door is open.	Close the front or right side door.
Toner Door Open	Toner door is open.	Close the toner door.
Reset Tray1	Multi-purpose tray motor error has occurred.	Uninstall tray1 and then reinstall it.
Load Letter	Any tray does not contain letter size media.	Load letter size media.

Executive in MPT Bond/Letterhead	Executive size bond/letterhead is requested in the multi-purpose tray.	Load bond/letterhead, executive sized paper in the multi-purpose tray.
Executive in MPT Recycled Paper	Executive size recycled paper is requested in the multi-purpose tray.	Load recycled, executive sized envelope in the multi-purpose tray.
ENV.C5 in MPT Plain Paper	Envelope C5 size plain paper is requested in the multi-purpose tray.	Load plain, Envelope C5 sized paper in the multi-purpose tray.
ENV.C5 in MPT Thin Paper	Envelope C5 size thin paper is requested in the multi-purpose tray.	Load thin, Envelope C5 sized paper in the multi-purpose tray.
ENV.C5 in MPT Thick Paper	Envelope C5 size thick paper is requested in the multi-purpose tray.	Load thick, Envelope C5 sized paper in the multi-purpose tray.
ENV.C5 in MPT Transparency	Envelope C5 size transparency is requested in the multi-purpose tray.	Load transparency, Envelope C5 sized paper in the multi-purpose tray.

Message on LCD	Possible Cause	Recovery
ENV.C5 in MPT Label	Envelope C5 size label is requested in the multi-purpose tray.	Load label, Envelope C5 sized paper in the multi-purpose tray.
ENV.C5 in MPT Coated Paper	Envelope C5 size coated paper is requested in the multi-purpose tray.	Load coated, Envelope C5 sized paper in the multi-purpose tray.
ENV.C5 in MPT Card Stock	ENV.C5 size card stock is requested in the multi-purpose tray.	Load card stock, ENV.C5 sized paper in the multi-purpose tray.
ENV.C5 in MPT Envelope	Envelope C5 size envelope is requested in the multi-purpose tray.	Load envelope, Envelope C5 sized envelope in the multi-purpose tray.
ENV.C5 in MPT JP Postcard	ENV.C5 size JP postcard is requested in the multi-purpose tray.	Load JP postcard, ENV.C5 sized paper in the multi-purpose tray.
ENV.C5 in MPT JP Postcard 2nd	ENV.C5 size JP postcard 2nd is requested in the multi-purpose tray.	Load JP postcard 2nd, ENV.C5 sized paper in the multi-purpose tray.
ENV.C5 in MPT Bond/Letterhead	Envelope C5 size bond/letterhead is requested in the multi-purpose tray.	Load bond/letterhead, Envelope C5 sized paper in the multi-purpose tray.
ENV.C5 in MPT Recycled Paper	Envelope C5 size recycled paper is requested in the multi-purpose tray.	Load recycled, Envelope C5 sized paper in the multi-purpose tray.
ENV.C6 in MPT Plain Paper	Envelope C6 size plain paper is requested in the multi-purpose tray.	Load plain, Envelope C6 sized paper in the multi-purpose tray.
ENV.C6 in MPT Thin Paper	Envelope C6 size thin paper is requested in the multi-purpose tray.	Load thin, Envelope C6 sized paper in the multi-purpose tray.
ENV.C6 in MPT Transparency	Envelope C6 size transparency is requested in the multi-purpose tray.	Load transparency, Envelope C6 sized paper in the multi-purpose tray.
ENV.C6 in MPT Label	Envelope C6 size label is requested in the multi-purpose tray.	Load label, Envelope C6 sized paper in the multi-purpose tray.
ENV.C6 in MPT Coated Paper	Envelope C6 size coated paper is requested in the multi-purpose tray.	Load coated, Envelope C6 sized paper in the multi-purpose tray.
ENV.C6 in MPT Thick Paper	Envelope C6 size thick paper is requested in the multi-purpose tray.	Load thick, Envelope C6 sized paper in the multi-purpose tray.
ENV.C6 in MPT Card Stock	ENV.C6 size card stock is requested in the multi-purpose tray.	Load card stock, Envelope C6 sized paper in the multi-purpose tray.
ENV.C6 in MPT Envelope	Envelope C6 size envelope is requested in the multi-purpose tray.	Load envelope, Envelope C6 sized envelope in the multi-purpose tray.
ENV.C6 in MPT JP Postcard	Envelope C6 size JP postcard is requested in the multi-purpose tray.	Load JP postcard, Envelope C6 sized paper in the multi-purpose tray.
ENV.C6 in MPT JP Postcard 2nd	Envelope C6 size JP postcard 2nd is requested in the multi-purpose tray.	Load JP postcard 2nd, Envelope C6 sized paper in the multi-purpose tray.
ENV.C6 in MPT Bond/Letterhead	Envelope C6 size bond/letterhead is requested in the multi-purpose tray.	Load bond/letterhead, Envelope C6 sized paper in the multi-purpose tray.
ENV.C6 in MPT Recycled Paper	Envelope C6 size recycled paper is requested in the multi-purpose tray.	Load recycled, Envelope C6 sized paper in the multi-purpose tray.
ENV.#9 in MPT Plain Paper	Envelope #9 size plain paper is requested in the multi-purpose tray.	Load plain, Envelope #9 sized paper in the multi-purpose tray.
ENV.#9 in MPT Thin Paper	Envelope #9 size thin paper is requested in the multi-purpose tray.	Load thin, Envelope #9 sized paper in the multi-purpose tray.

JP POSTD in MPT Recycled Paper	JP POSTD size recycled paper is requested in the multi-purpose tray.	Load recycled, JP POSTD sized paper in the multi-purpose tray.

Message on LCD	Possible Cause	Recovery
Custom in MPT Plain Paper	Custom size plain paper is requested in the multi-purpose tray.	Load plain, Custom sized paper in the multi-purpose tray.
Custom in MPT Thin Paper	Custom size thin paper is requested in the multi-purpose tray.	Load thin, Custom sized paper in the multi-purpose tray.
Custom in MPT Transparency	Custom size transparency is requested in the multi-purpose tray.	Load transparency, Custom sized paper in the multi-purpose tray.
Custom in MPT Label	Custom size label is requested in the multi-purpose tray.	Load label, Custom sized paper in the multi-purpose tray.
Custom in MPT Coated Paper	Custom size coated paper is requested in the multi-purpose tray.	Load coated, Custom sized paper in the multi-purpose tray.
Custom in MPT Thick Paper	Custom size thick paper is requested in the multi-purpose tray.	Load thick, Custom sized paper in the multi-purpose tray.
Custom in MPT Card Stock	Custom size card stock is requested in the multi-purpose tray.	Load card stock, Custom sized paper in the multi-purpose tray.
Custom in MPT Envelope	Custom size envelope is requested in the multi-purpose tray.	Load envelope, Custom sized envelope in the multi-purpose tray.
Custom in MPT JP Postcard	Custom size JP postcard is requested in the multi-purpose tray.	Load JP postcard, Custom sized paper in the multi-purpose tray.
Custom in MPT JP Postcard 2nd	Custom size JP postcard 2nd is requested in the multi-purpose tray.	Load JP postcard 2nd, Custom sized paper in the multi-purpose tray.
Custom in MPT Bond/Letterhead	Custom size bond/letterhead is requested in the multi-purpose tray.	Load bond/letterhead, Custom sized paper in the multi-purpose tray.
Custom in MPT Recycled Paper	Custom size recycled paper is requested in the multi-purpose tray.	Load recycled, Custom sized paper in the multi-purpose tray.
The first page is printed, then error message, and Continue or Cancel are displayed by turns.	The length of the loaded media in the multi-purpose tray is shorter than the paper size setting of the printer driver.	Replace the media with the correct one and press the Continue button on the printer panel. The printer will print from the first page.
		Press the Cancel button on the printer panel to cancel printing. Set the paper size of the printer driver correctly.

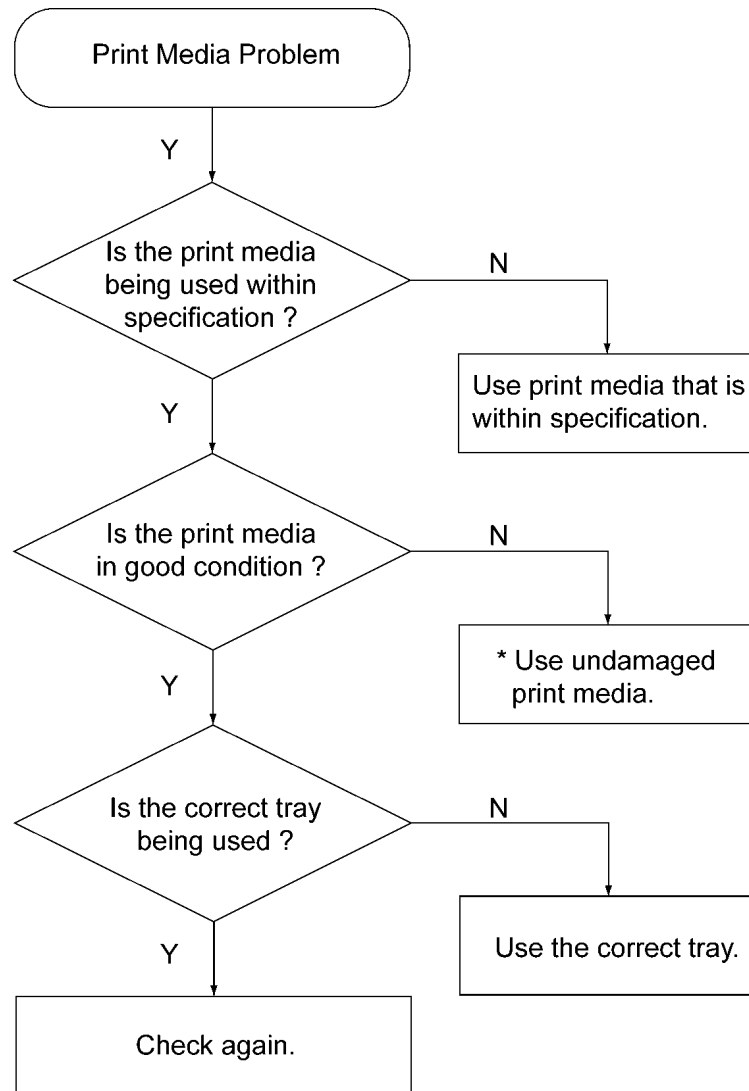

13.2.3. Printer Error (Call Service)

LCD Message	Printer Status	Possible Cause	Recovery (Refer to)
Printer Error 10	Laser Scanner Motor (Polygon Motor) is not phase-locked and is not rotating at normal speed after several seconds from power on.	Laser Scanner Motor (Polygon Motor) Error	Section 13.5.1
Printer Error 11	Video VSZ signal to controller is not detected.	V-Sync (VSZ) error	Section 13.5.1
Printer Error 20	Abnormal leakage current to charge roller or FTR is detected.	Charger error	Section 13.5.2
Printer Error 24	Accumulator CAM movement error has occurred.	Accumulator CAM movement error	Section 13.5.3
Printer Error 35	Color (C, M, Y) OPC home position signal is not held when the color Print Cartridge driver solenoid is turned on.	Color Print Cartridge driver solenoid error	Section 13.5.4
Printer Error 36	Black OPC home position signal is not held when the Black Print Cartridge drive solenoid is turned on.	Black Print Cartridge drive solenoid error	Section 13.5.5
Printer Error 37	When installing the new black print cartridge, the virgin detection fuse is not blown.		Section 13.5.6
Printer Error 38	When installing the new CMY print cartridge, the virgin detection fuse is not blown.		Section 13.5.6
Printer Error 40	Fuser temperature does not reach a certain temperature during warming up.	Temperature rising error or low error	Section 13.5.7
	Fuser temperature does not rise a certain degree within 2 sec.		
	Fuser temperature is certain degrees or more lower than target temperature.		
	Fuser temperature is 60°C or less in preheat mode.		
	Initial supplying electric power to the IH coil is 200 W or less.		
Printer Error 41	Fuser temperature is over 210°C .	High temperature error, thermistor 1 or thermistor 2 short circuit error	Section 13.5.8
Printer Error 43	Temperature detected by thermistor 2 is 50°C or more lower than that by thermistor 1	Temperature (detected by thermistor 2) low error	Section 13.5.7
Printer Error 45	Voltage for IH is under specified value. AC Input Voltage 100/120VAC : Detect voltage is under 80 V AC Input Voltage 220/240VAC : Detect voltage is under 176 V	IH low voltage error	Section 13.5.9
Printer Error 46	Fuser belt is not rotating normally.	Fuser belt error	Section 13.5.10
Printer Error 47	Solenoid drive circuit error has occurred.	Solenoid drive transistor short circuit	Section 13.5.11
Printer Error 48	Temperature detected by thermistor 3 is 35°C or less.	Temperature (detected by thermistor 3) low error	Section 13.5.12
Printer Error 50	Sub Fuser Fan is not phase-locked and is not rotating at normal speed.	Sub Fuser Fan error	Section 13.5.13

LCD Message	Printer Status	Possible Cause	Recovery (Refer to)
Printer Error 53	PSU Fan is not phase-locked and is not rotating at normal speed.	PSU fan Error	Section13.5.14
Printer Error 54	Fuser Fan is not phase-locked and is not rotating at normal speed.	Fuser fan Error	Section13.5.15
Printer Error 56	Color Mis-registration Sensor is not calibrated.	Color Mis-registration Sensor Error	Section13.5.16

13.3. Jam and HDD Error

13.3.1. Print Media Problem

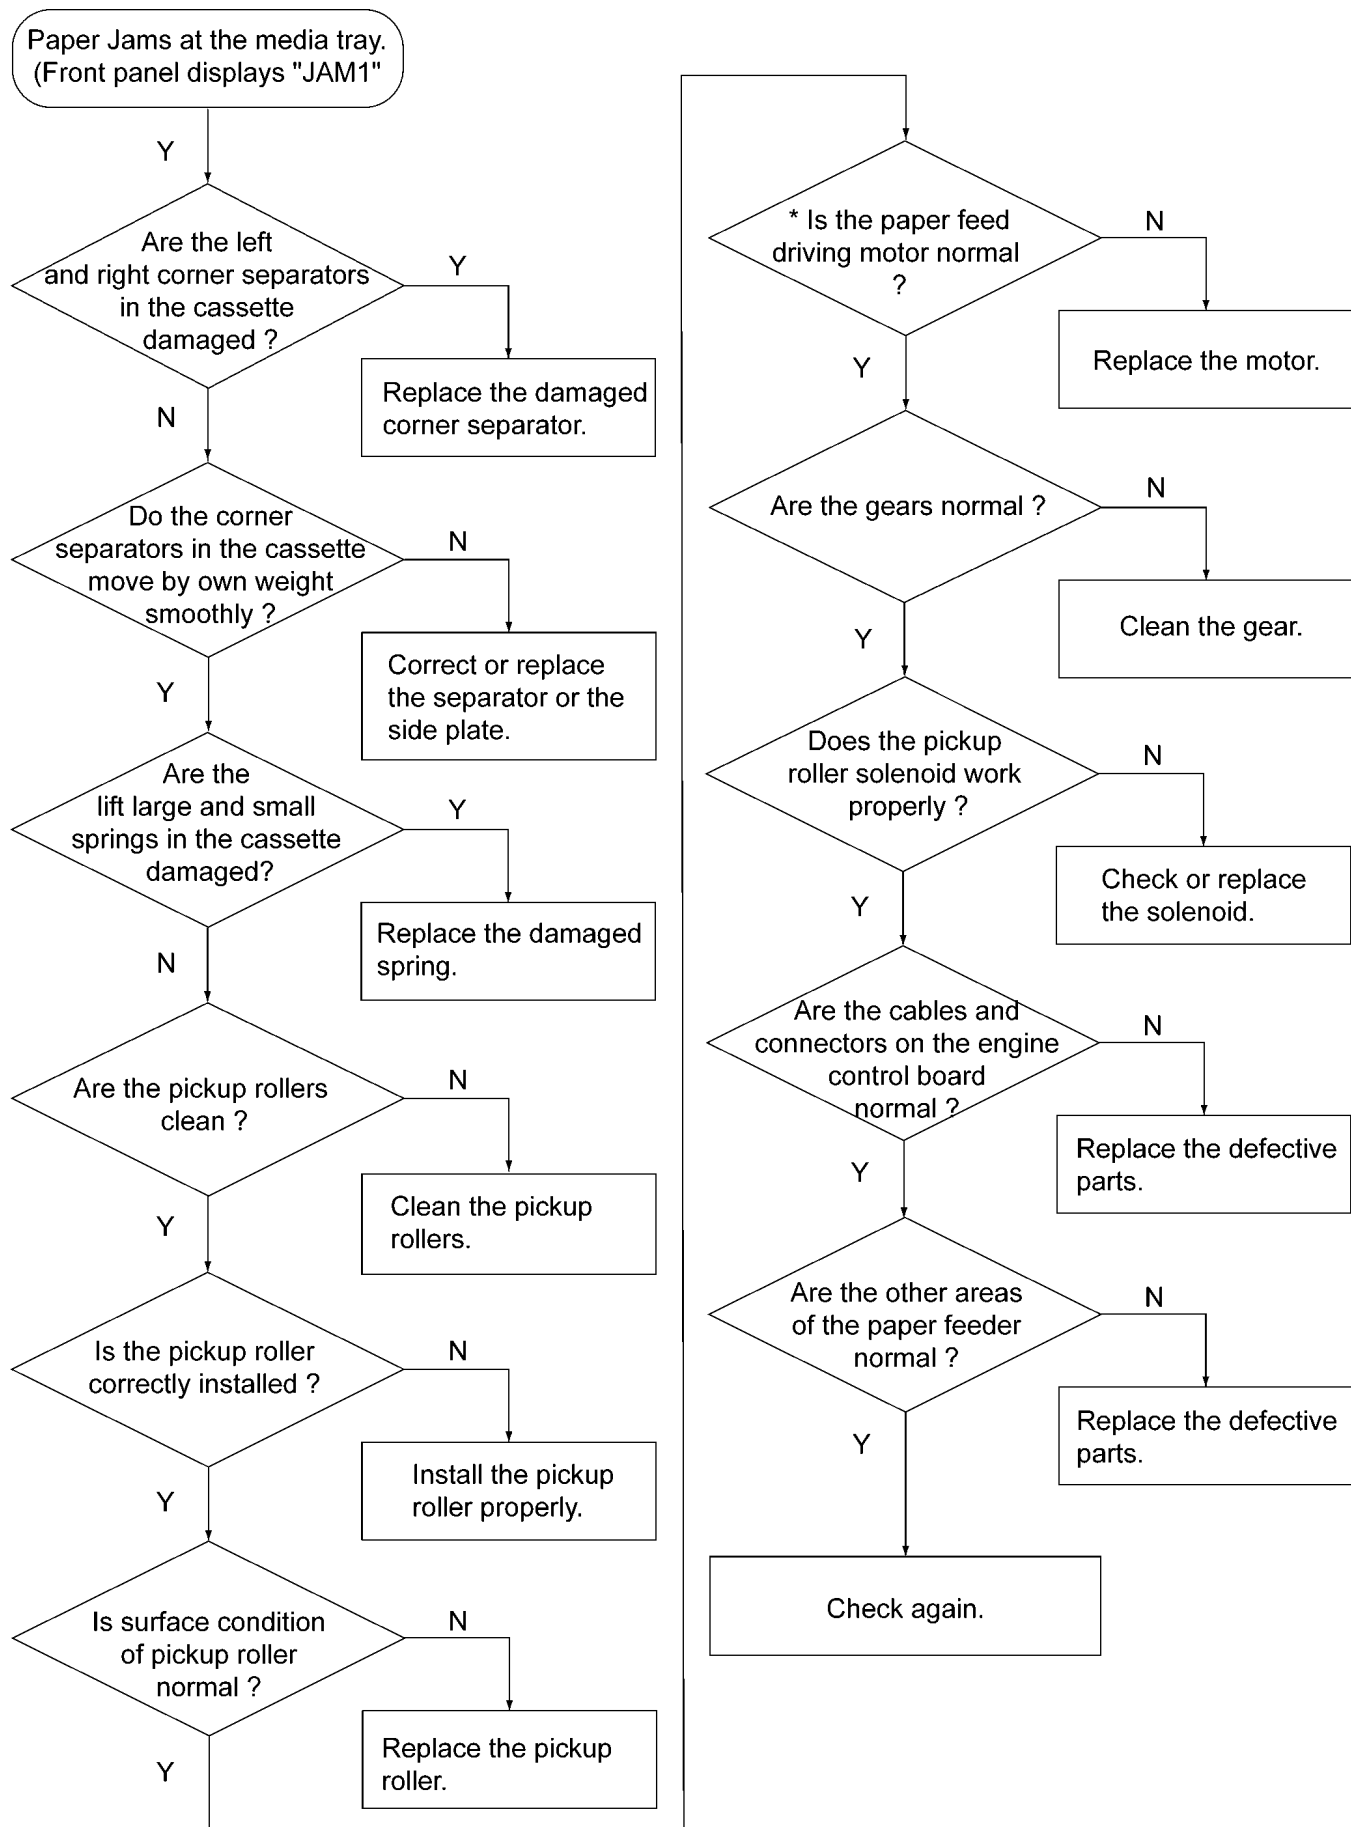

* For example, the media has a Curl, Bend, Burrs of the edge, wrinkle, etc.

13.3.2. Print Media Skew

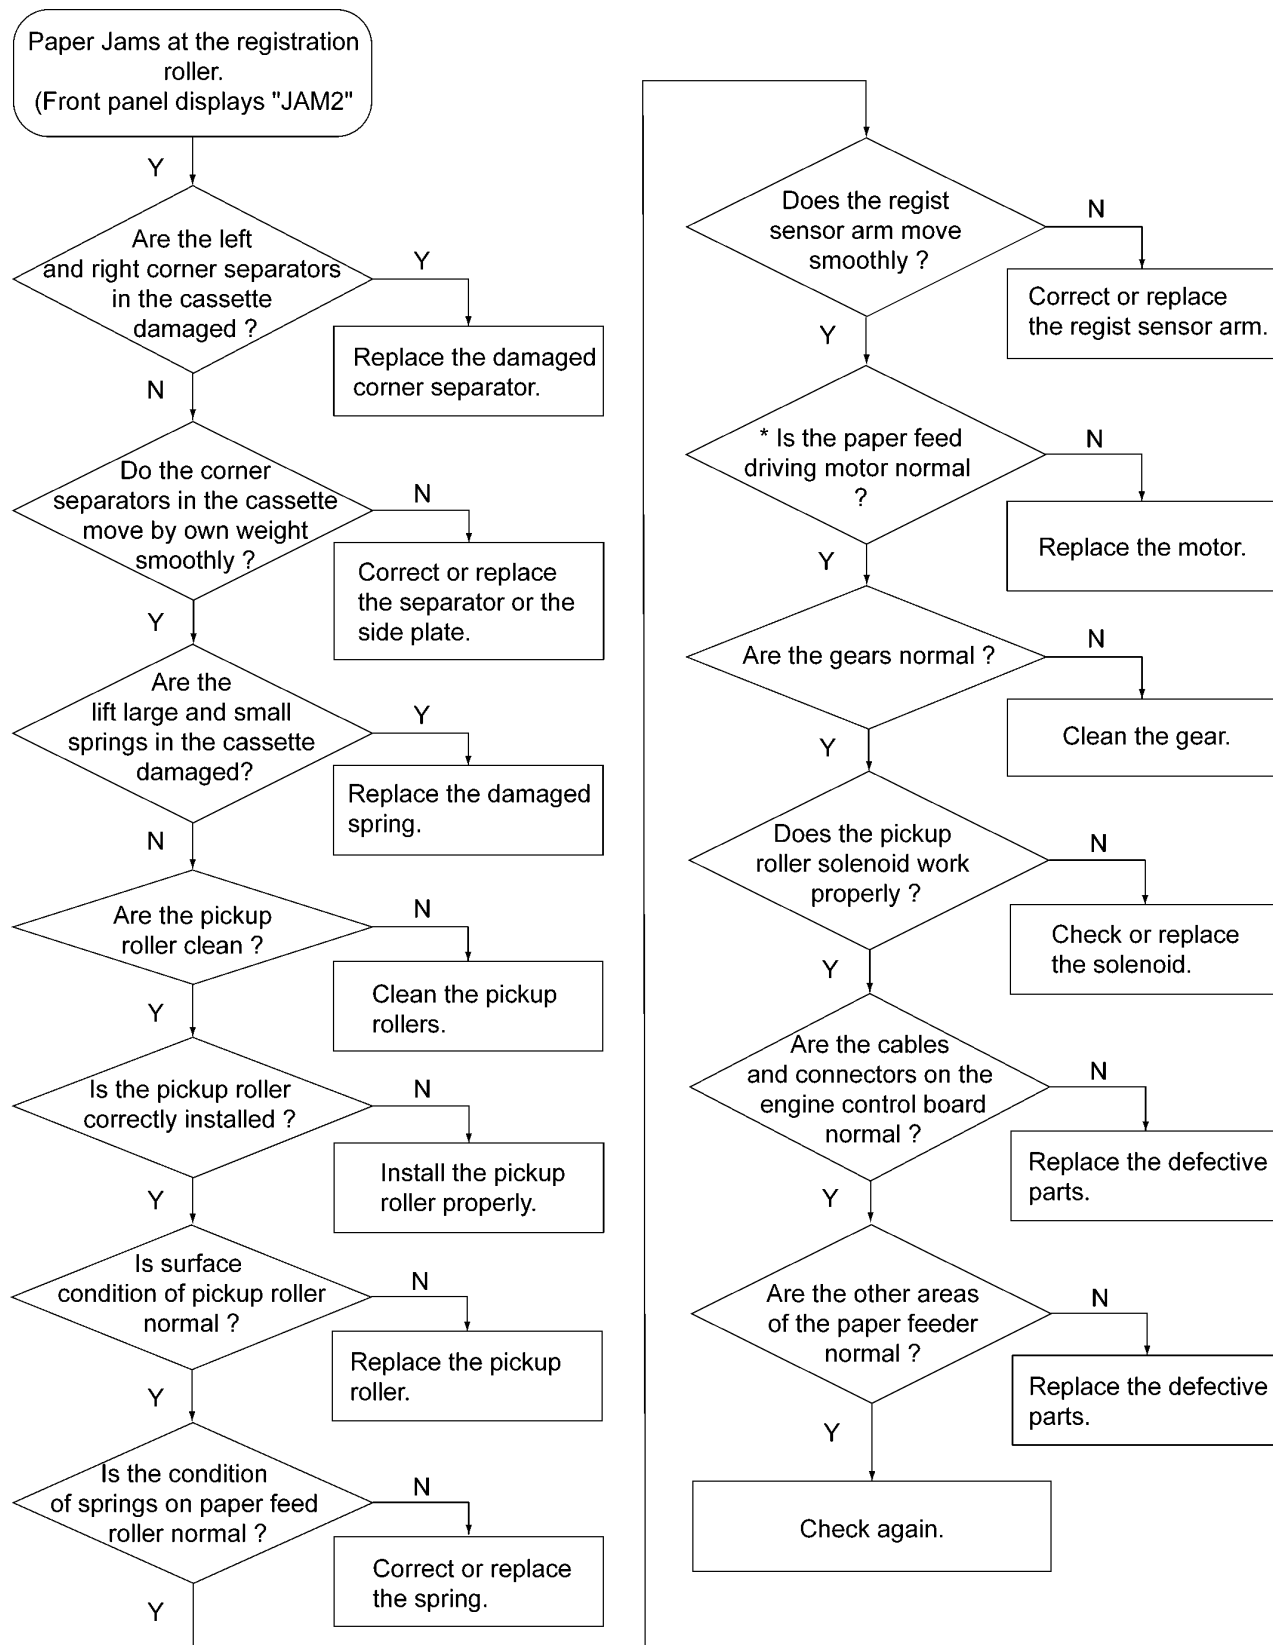

13.3.3. Paper Jam at the media tray

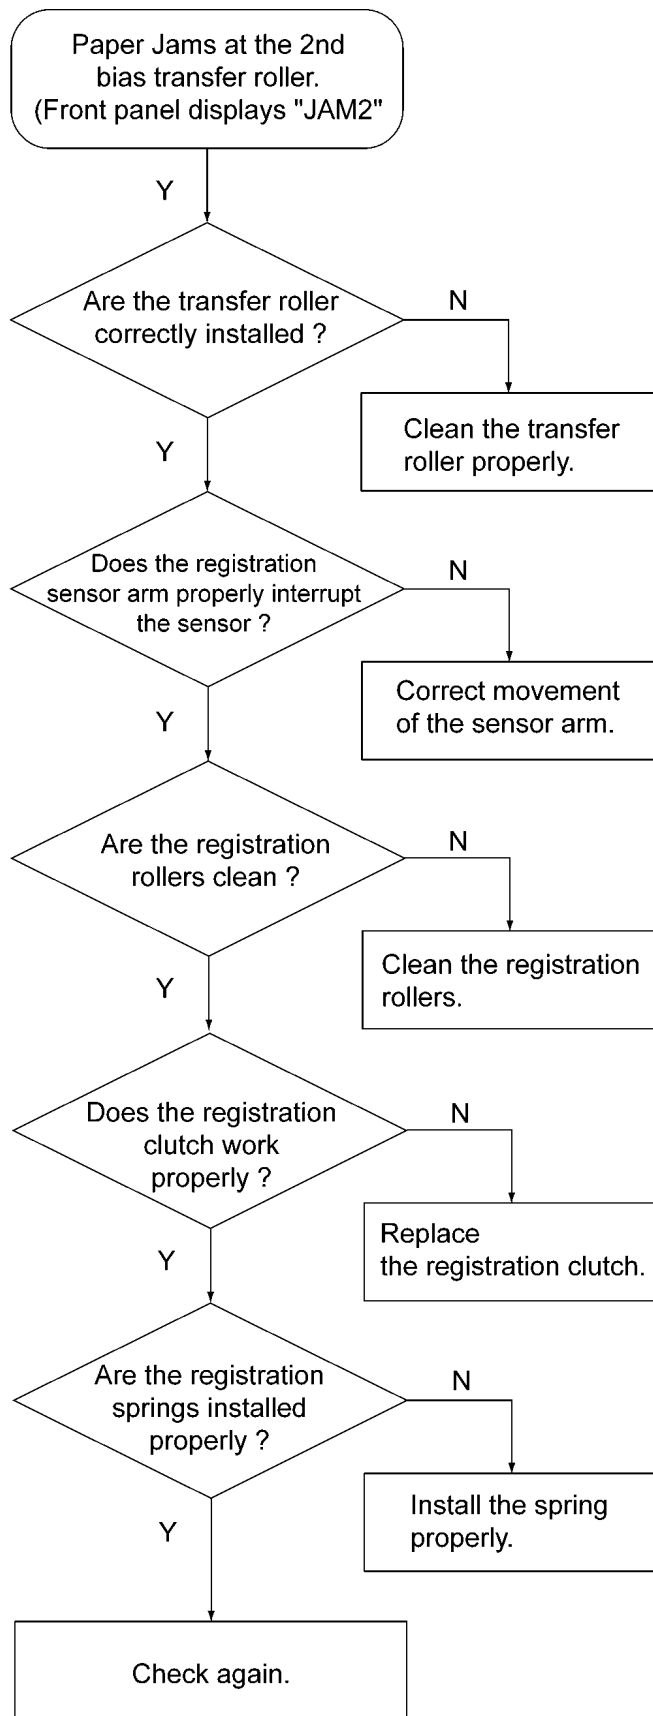

* Flat side of the Cam shaped pickup rollers face down prior to pick a sheet of paper.

13.3.4. Paper Jams at the registration roller.

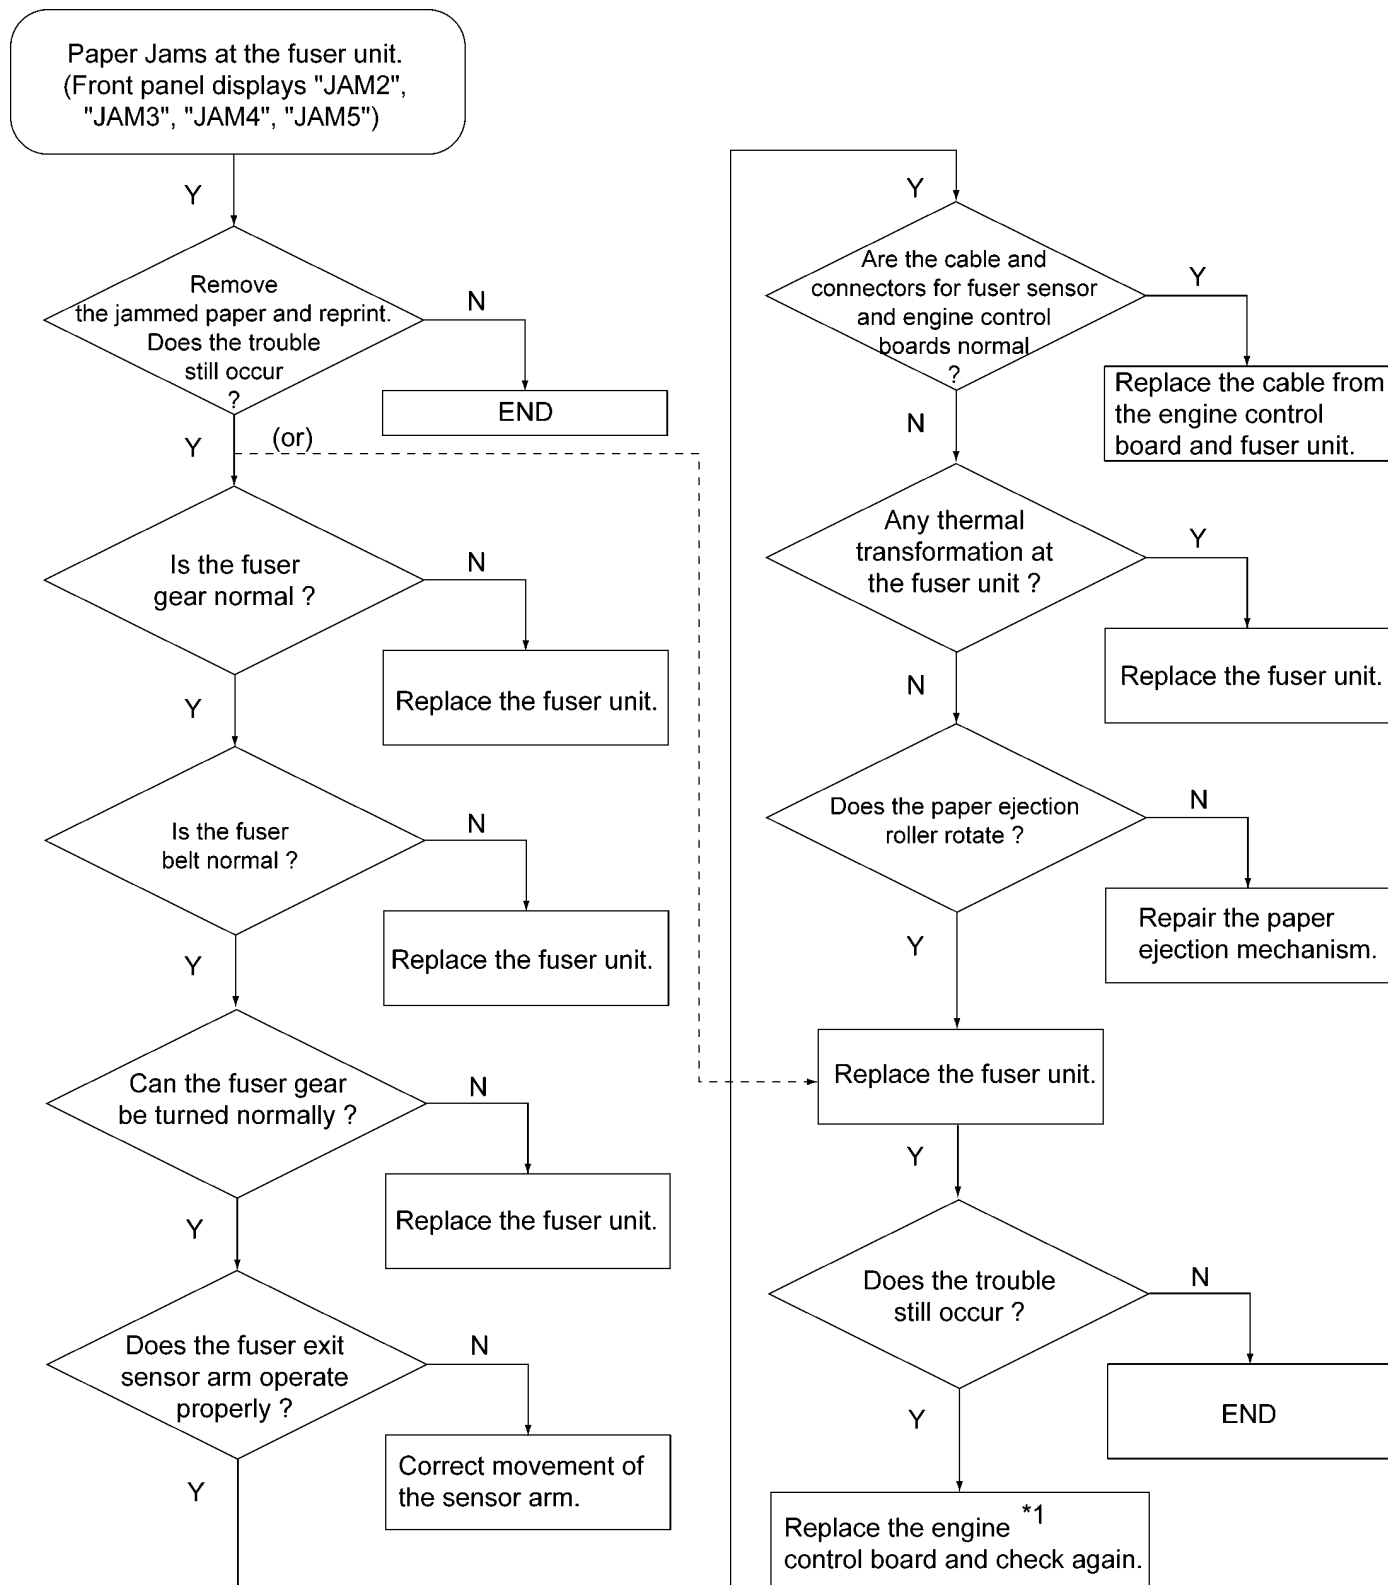

* Flat side of the Cam shaped pickup rollers face down prior to pick a sheet of paper.

13.3.5. Paper Jams at the 2nd bias transfer roller

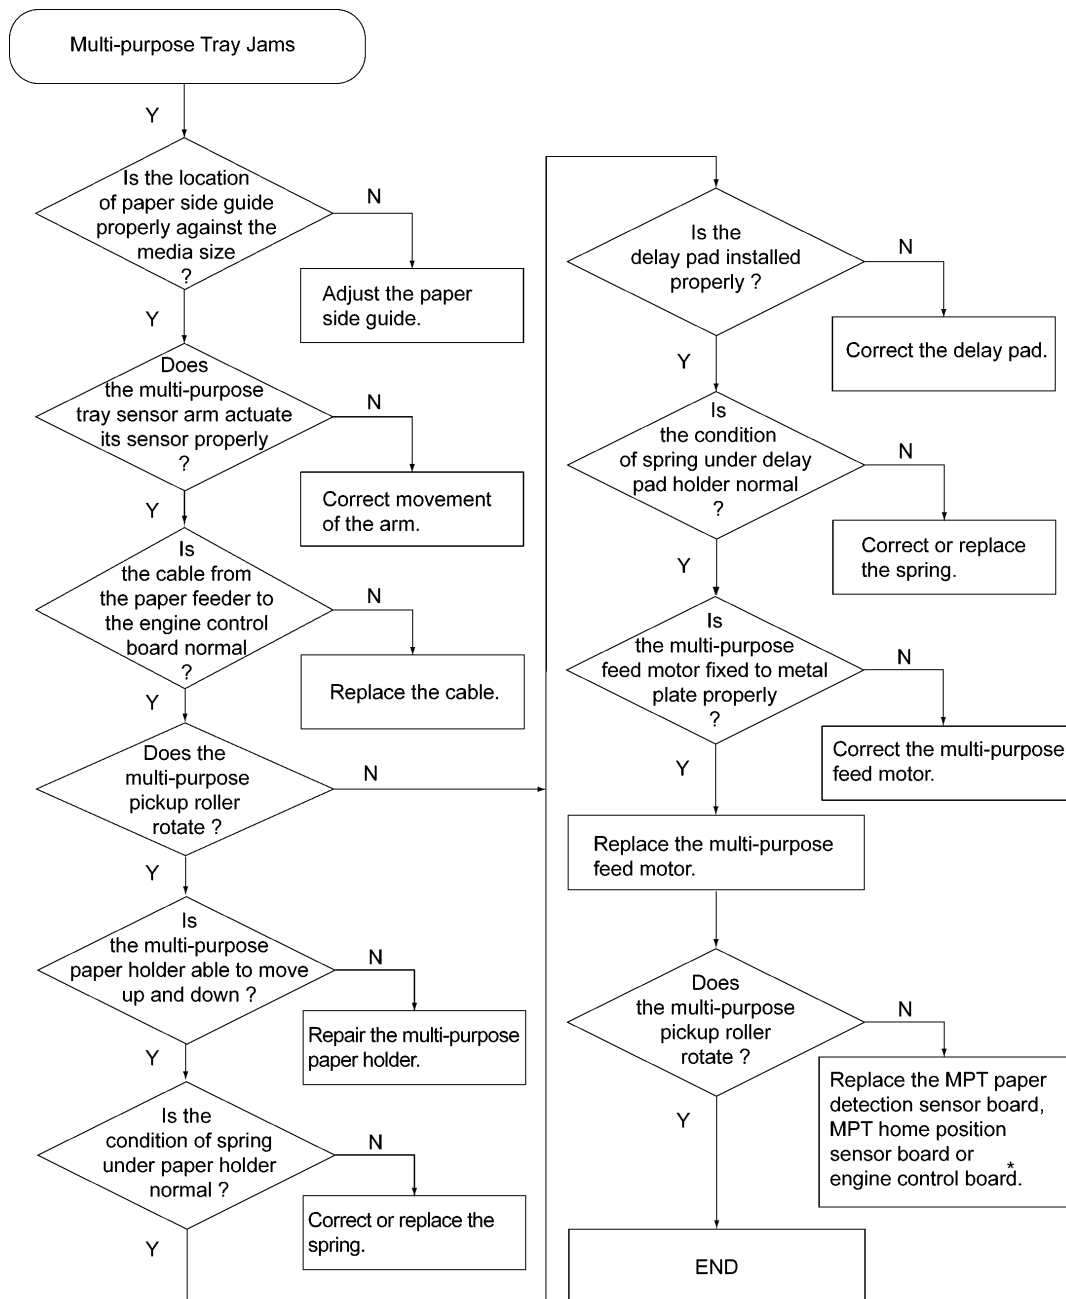

13.3.6. Paper Jams at the fuser unit

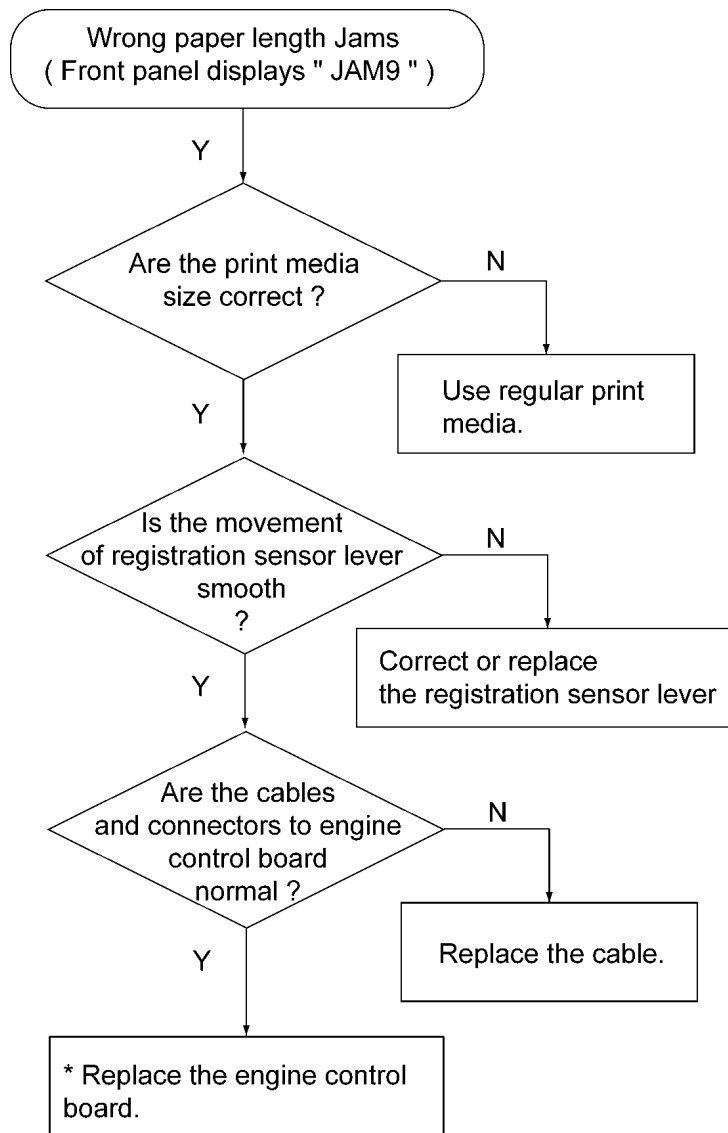

*1 When replacing the engine control board, remove the EEPROM (IC5) from the original engine control board, and install it on the new one.

13.3.7. Multi-purpose Tray Jams

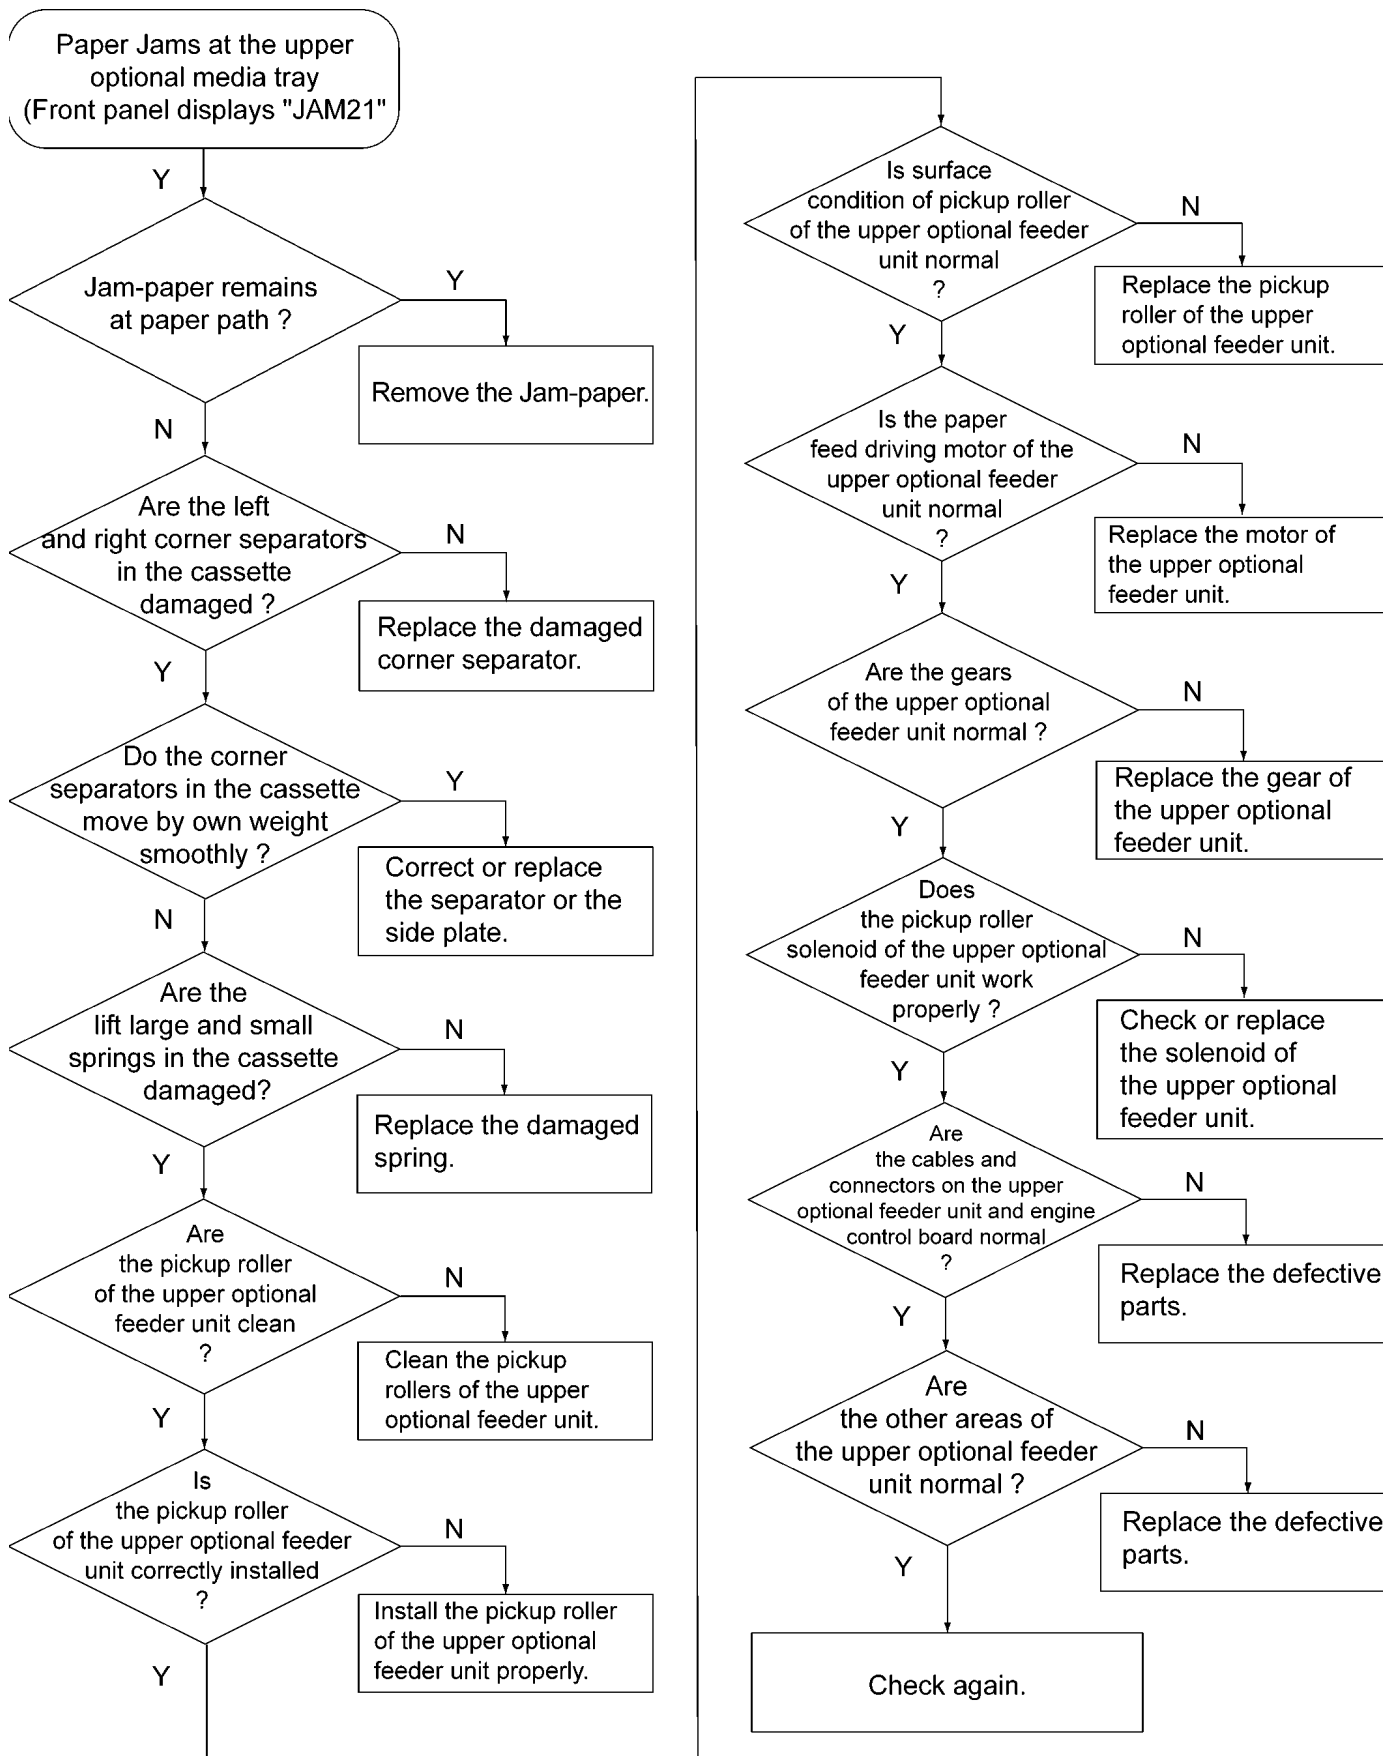

* When replacing the engine control board, remove the EEPROM (IC5) from the original engine control board, and install it on the new one.

13.3.8. Wrong paper length Jams

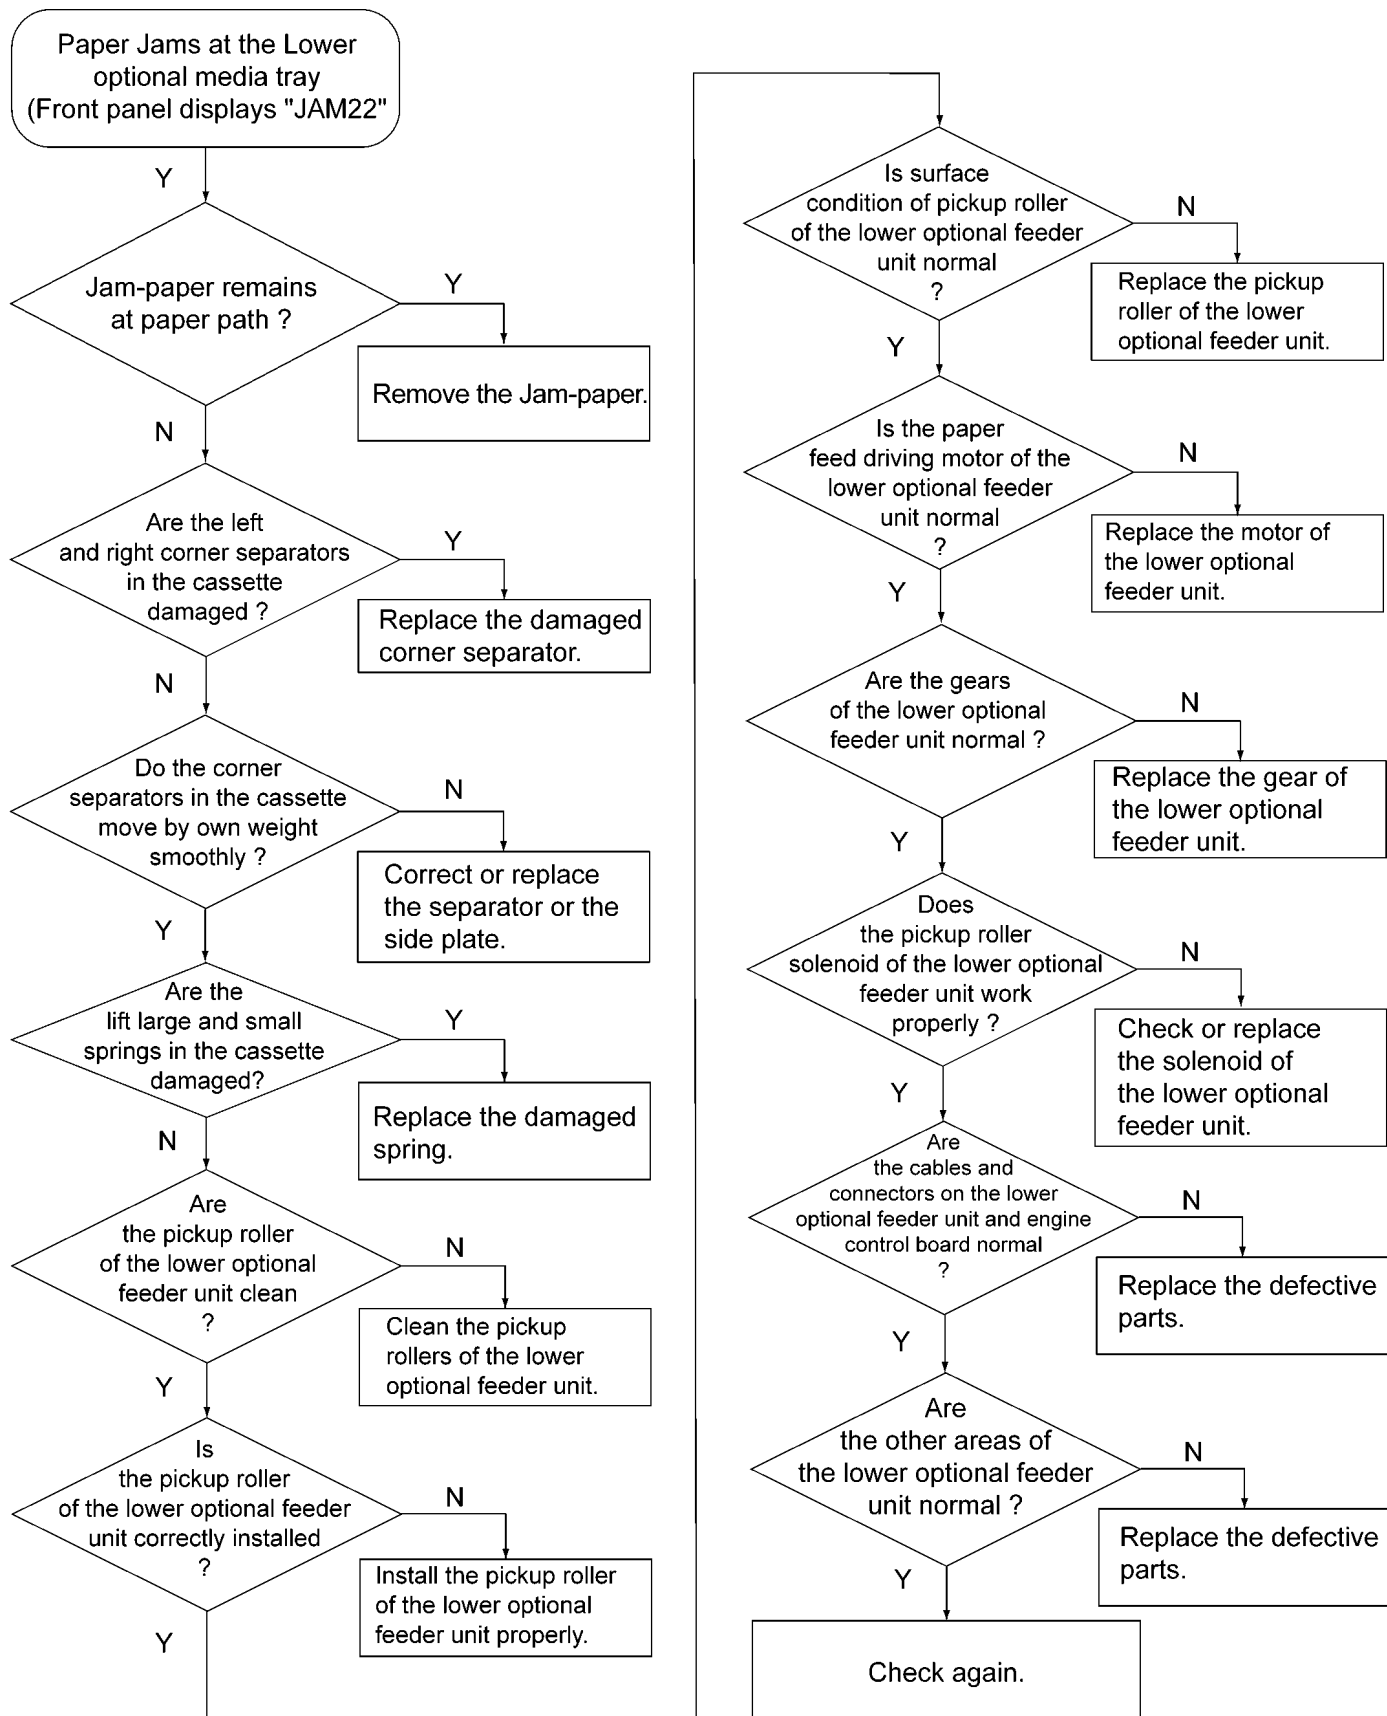

* When replacing the engine control board, remove the EEPROM (IC5) from the original engine control board, and install it on the new one.

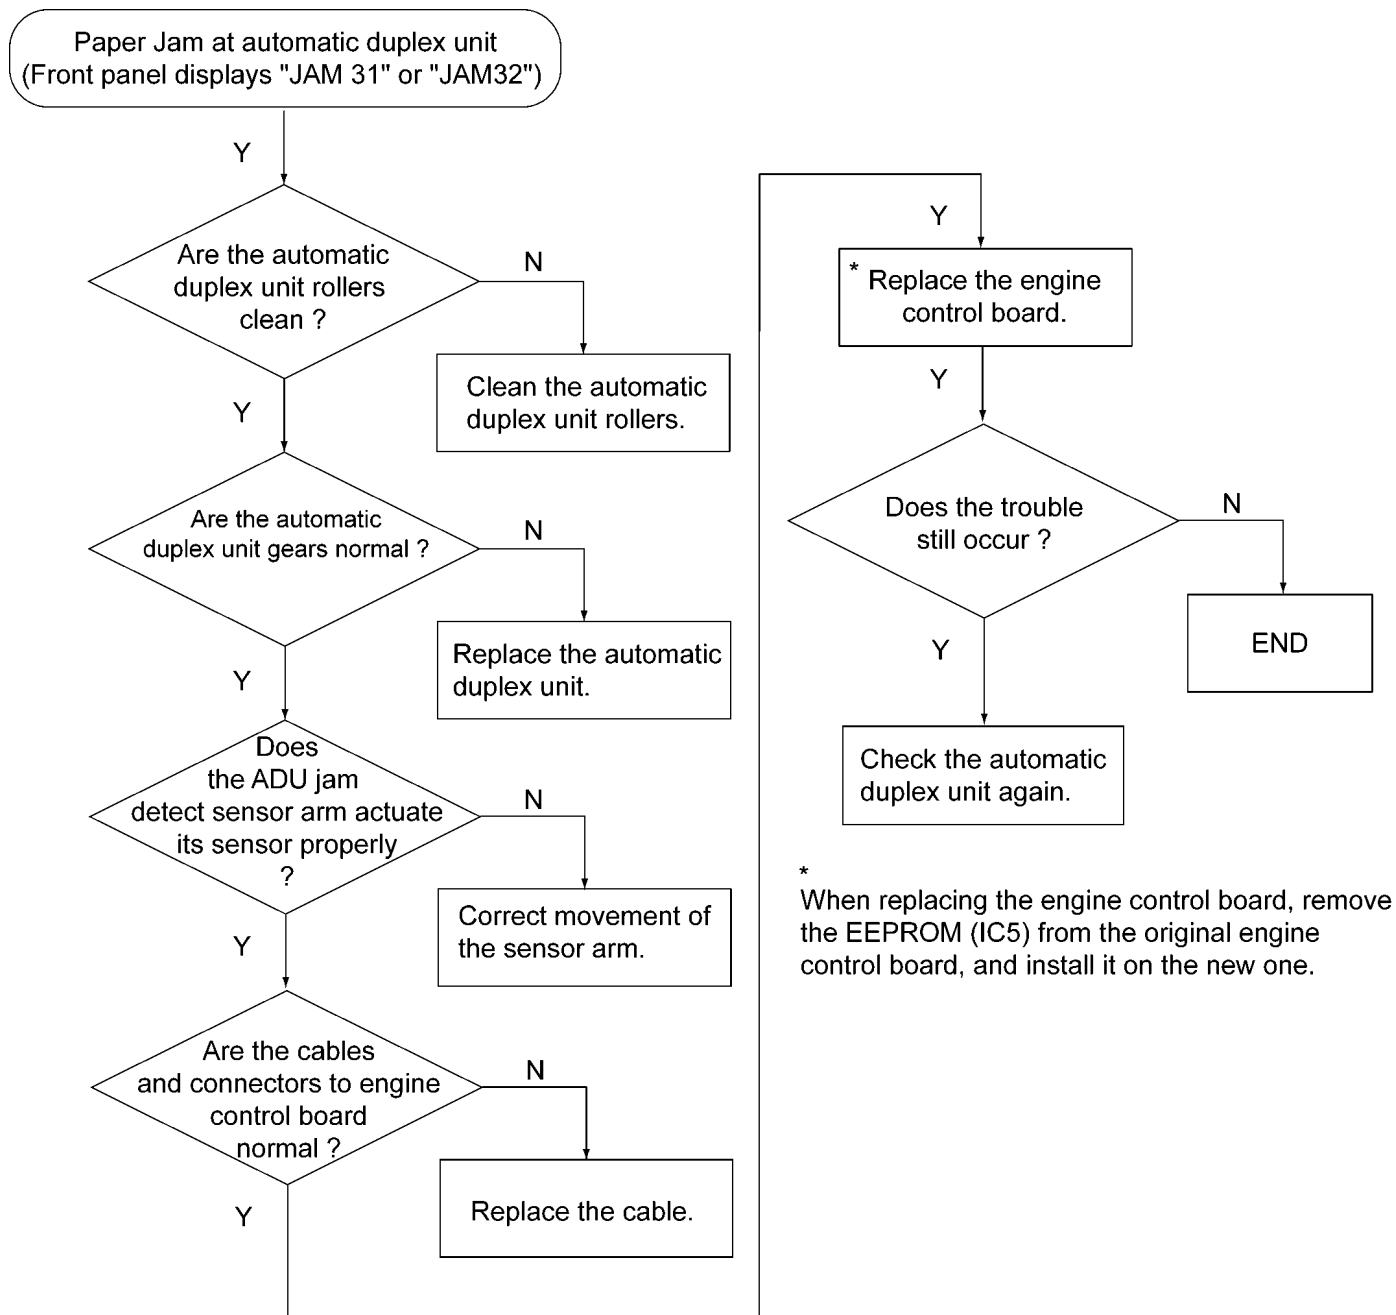

13.3.9. Paper Jams at the upper optional media tray (OPF1)

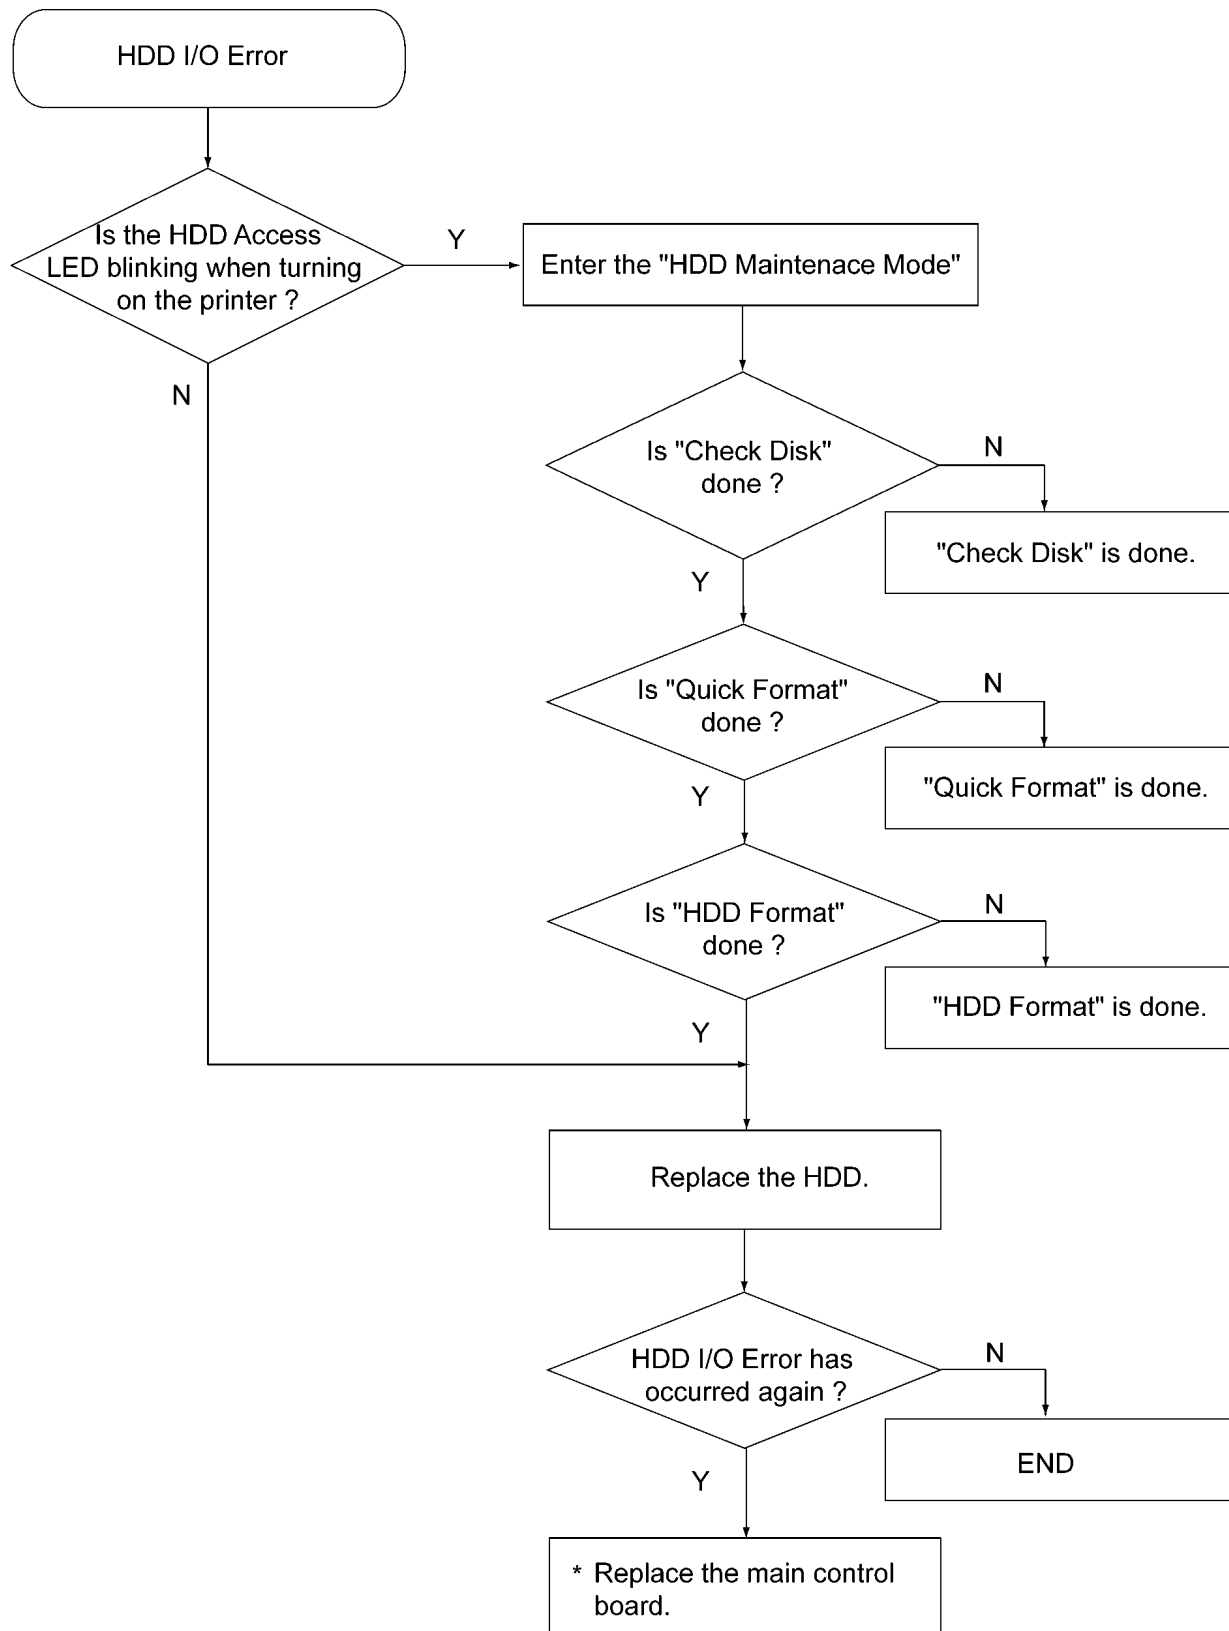

13.3.10. Paper Jams at the lower optional media tray (OPF2)

13.3.11. Paper Jam at automatic duplex unit (ADU)

13.3.12. HDD I/O Error

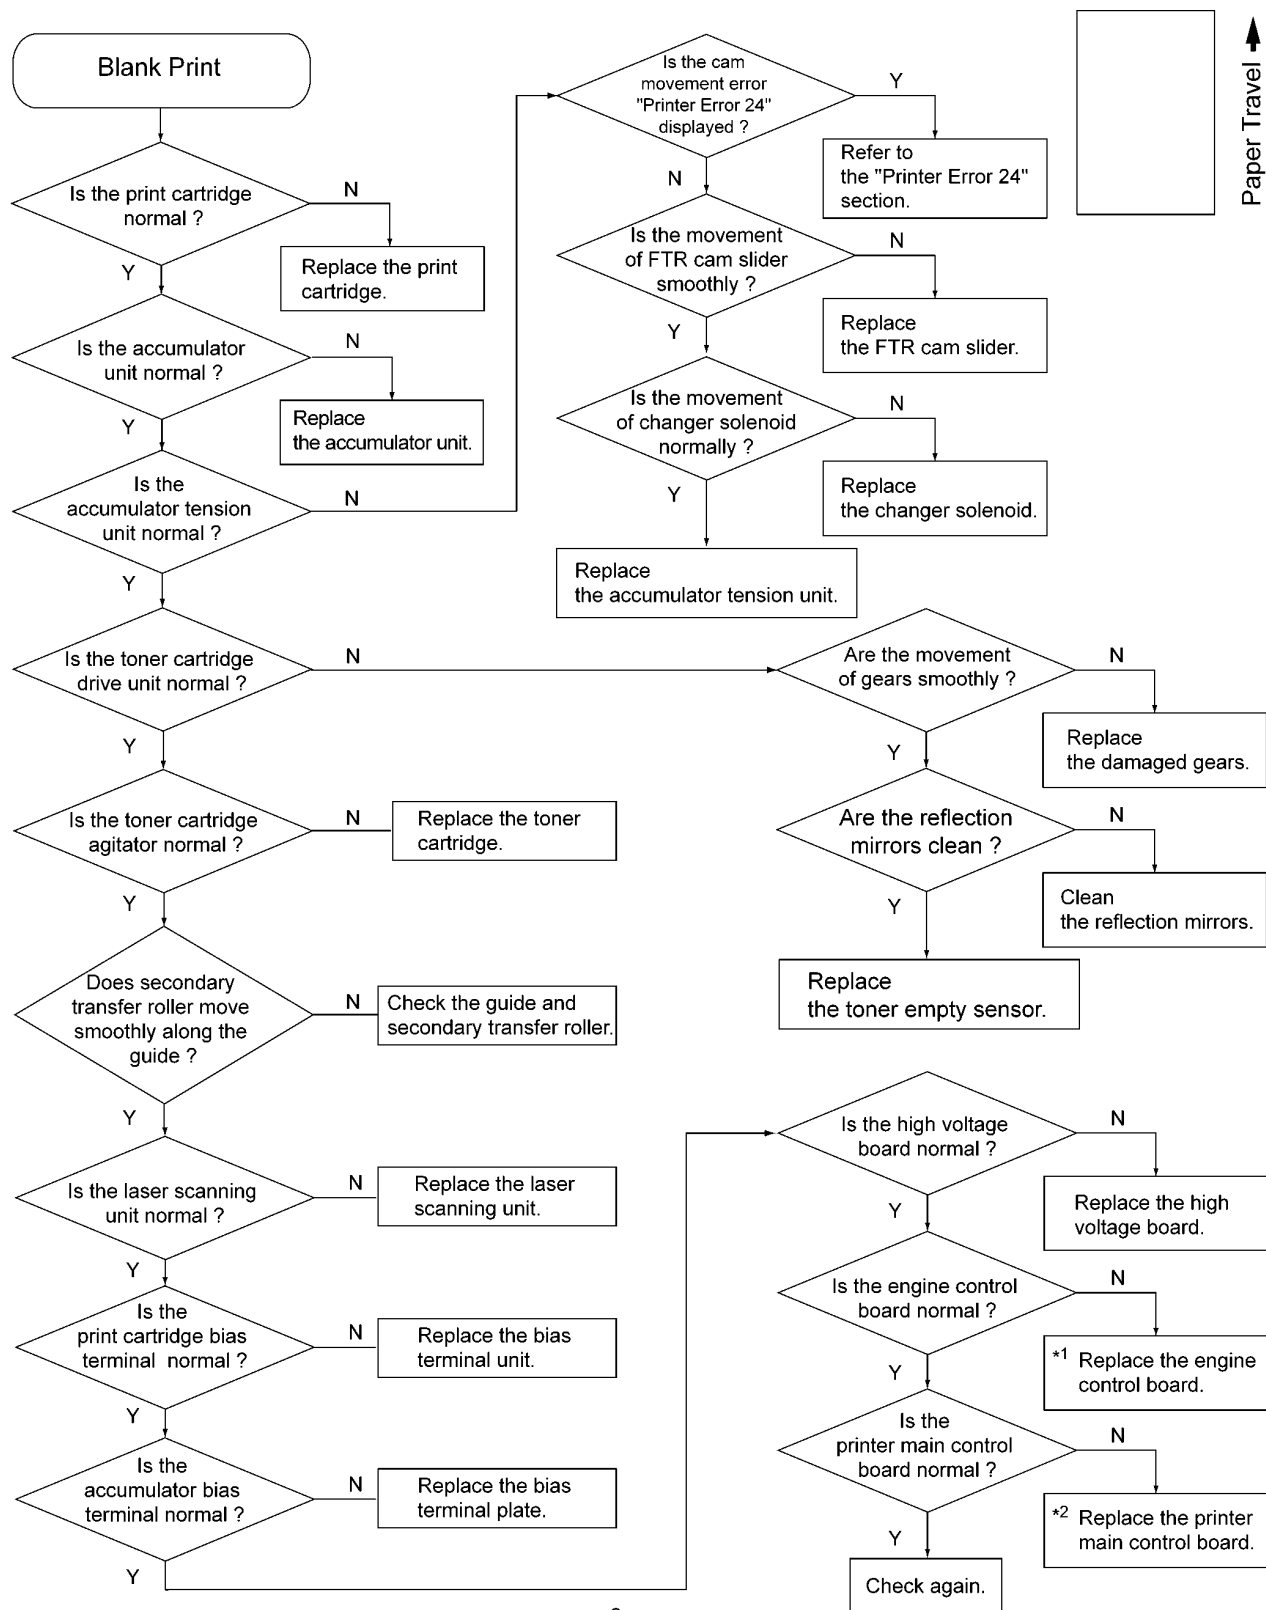

*

When replacing the printer main control board, remove the printer ROM board, SO-DIMM and EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

13.4. Print Quality

13.4.1. Blank Print

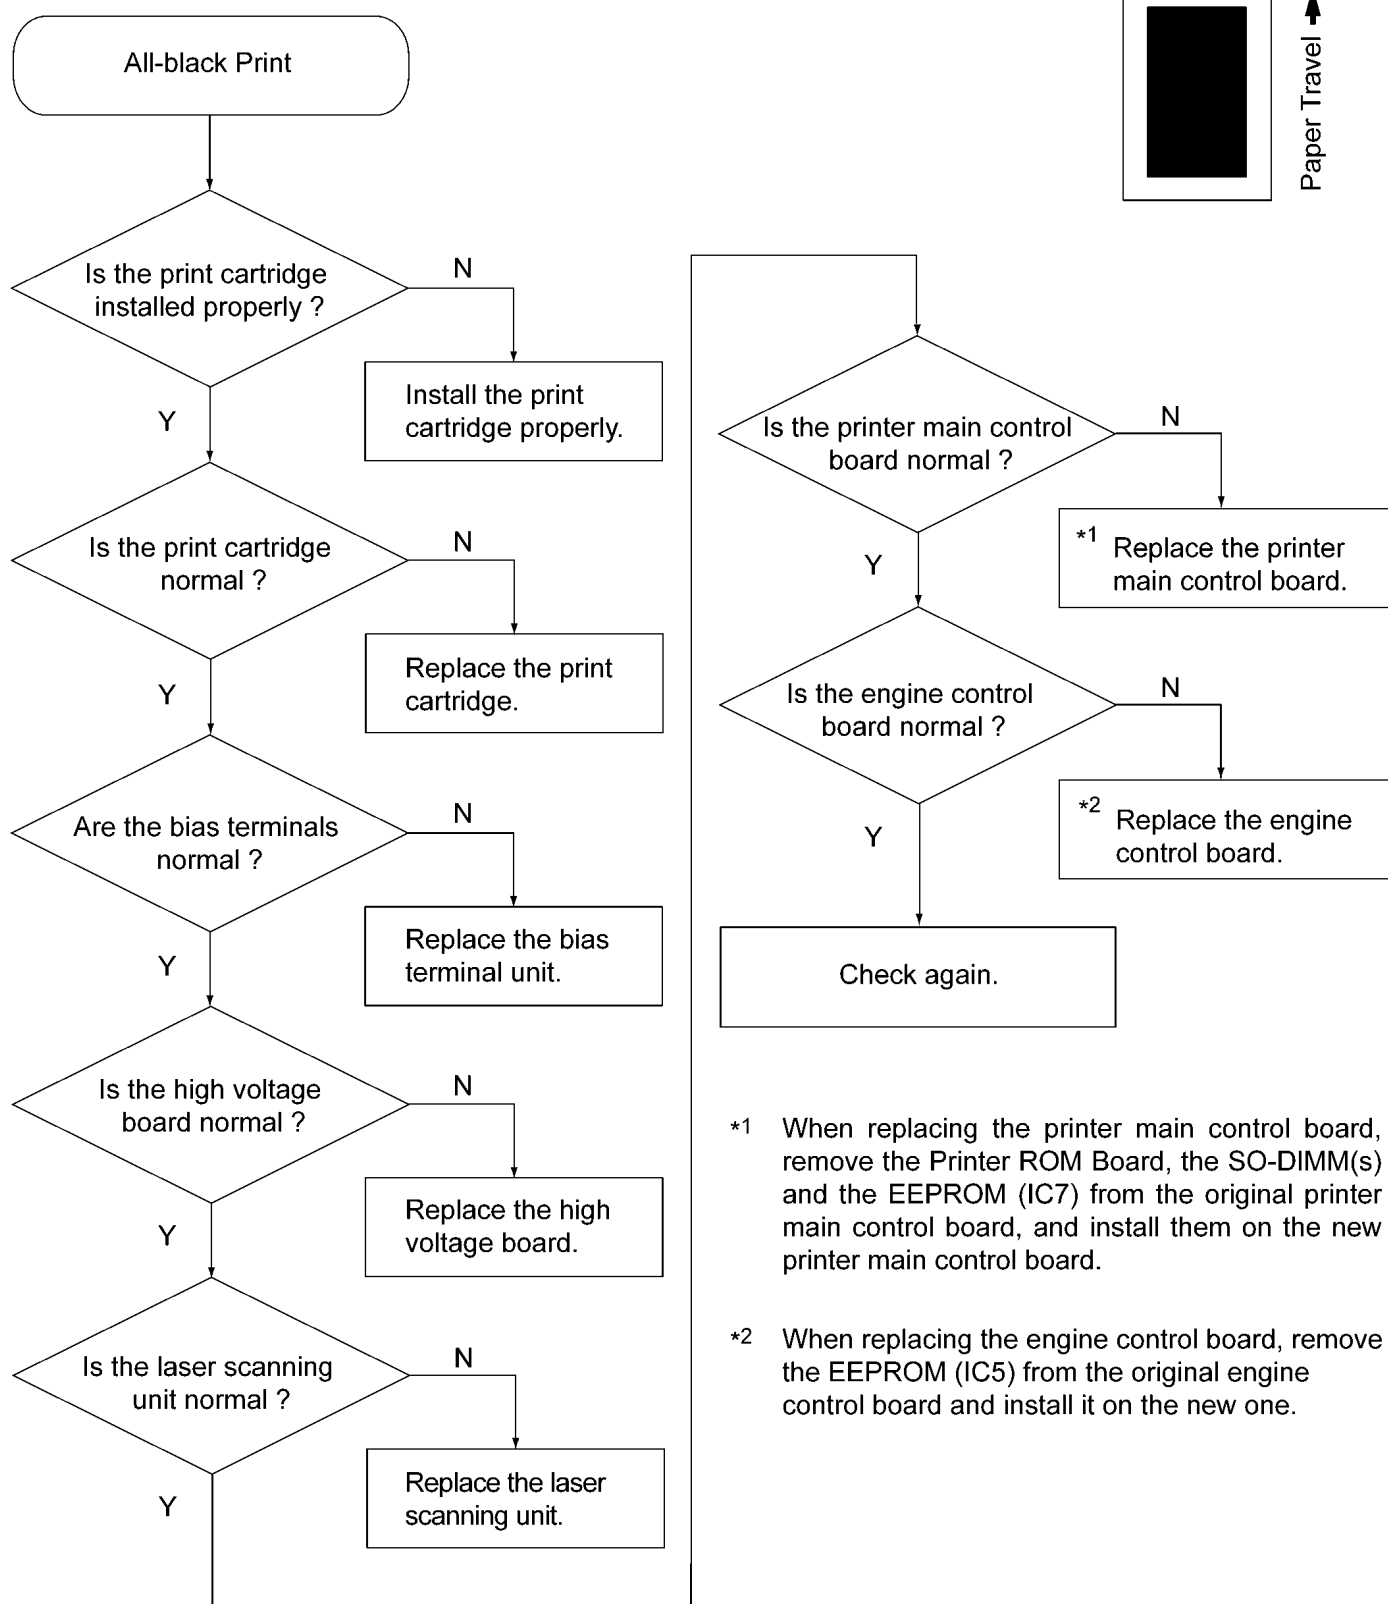

*1

When replacing the engine control board, remove the EEPROM (IC5) from the original engine control board, and it on the new one.

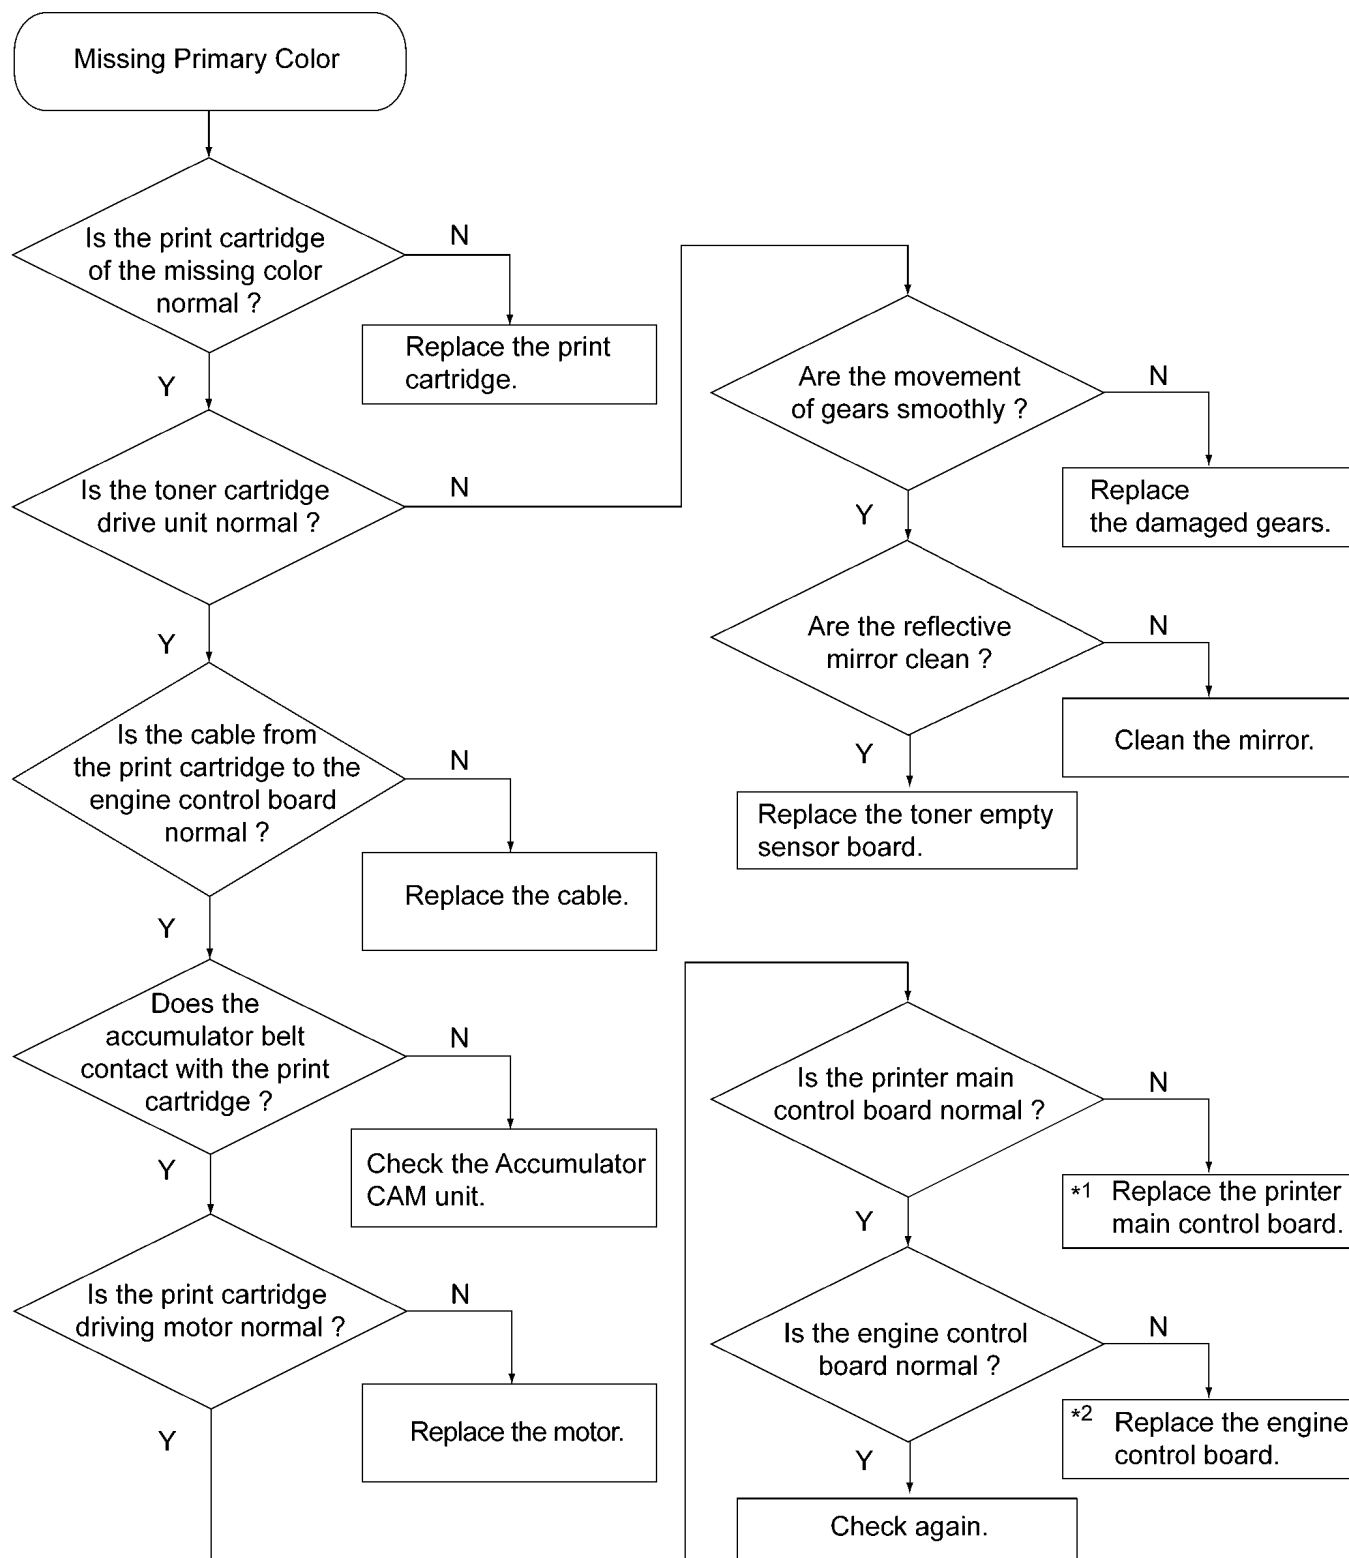

*2

When replacing the printer main control board, remove the Printer ROM Board, the SO-DIMM(s) and the EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

13.4.2. All-black Print

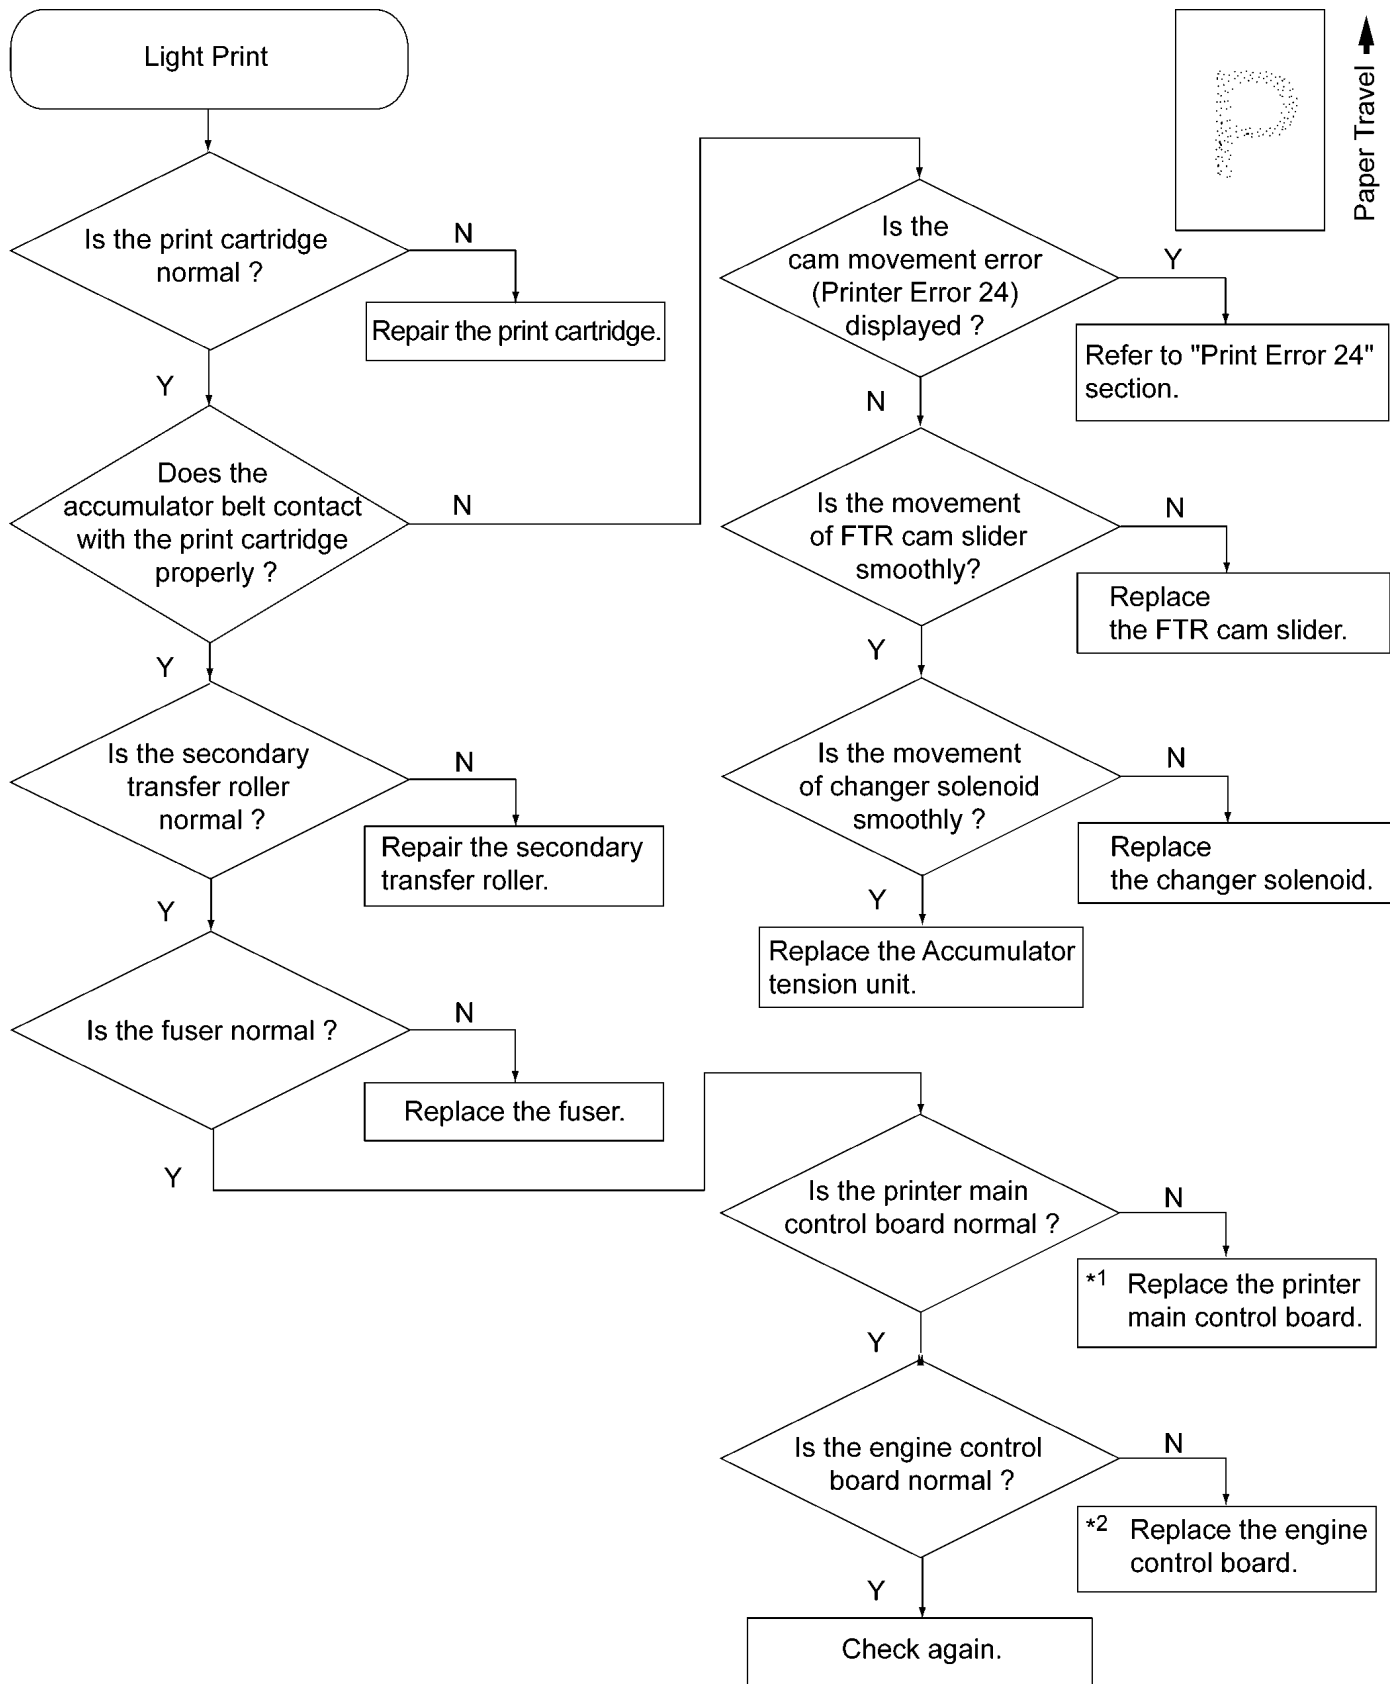

13.4.3. Missing Primary Color

*1 When replacing the printer main control board, remove the Printer ROM Board, the SO-DIMM(s) and the EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

*2 When replacing the engine control board, remove the EEPROM (IC5) from the original engine control board and install it on the new one.

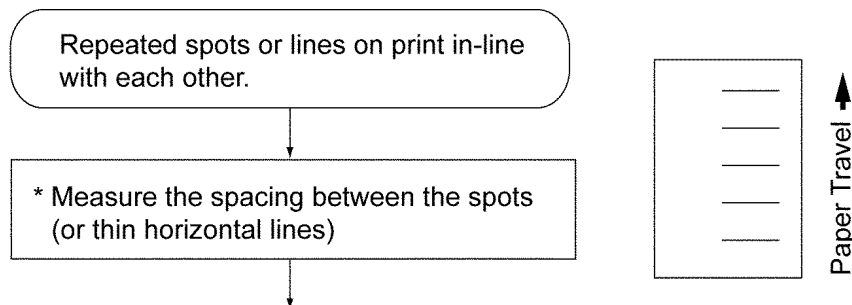

13.4.4. Light Print

*1 When replacing the printer main control board, remove the Printer ROM Board, the SO-DIMM(s) and the EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

*2 When replacing the engine control board, remove the EEPROM (IC5) from the original engine control board and install it on the new one.

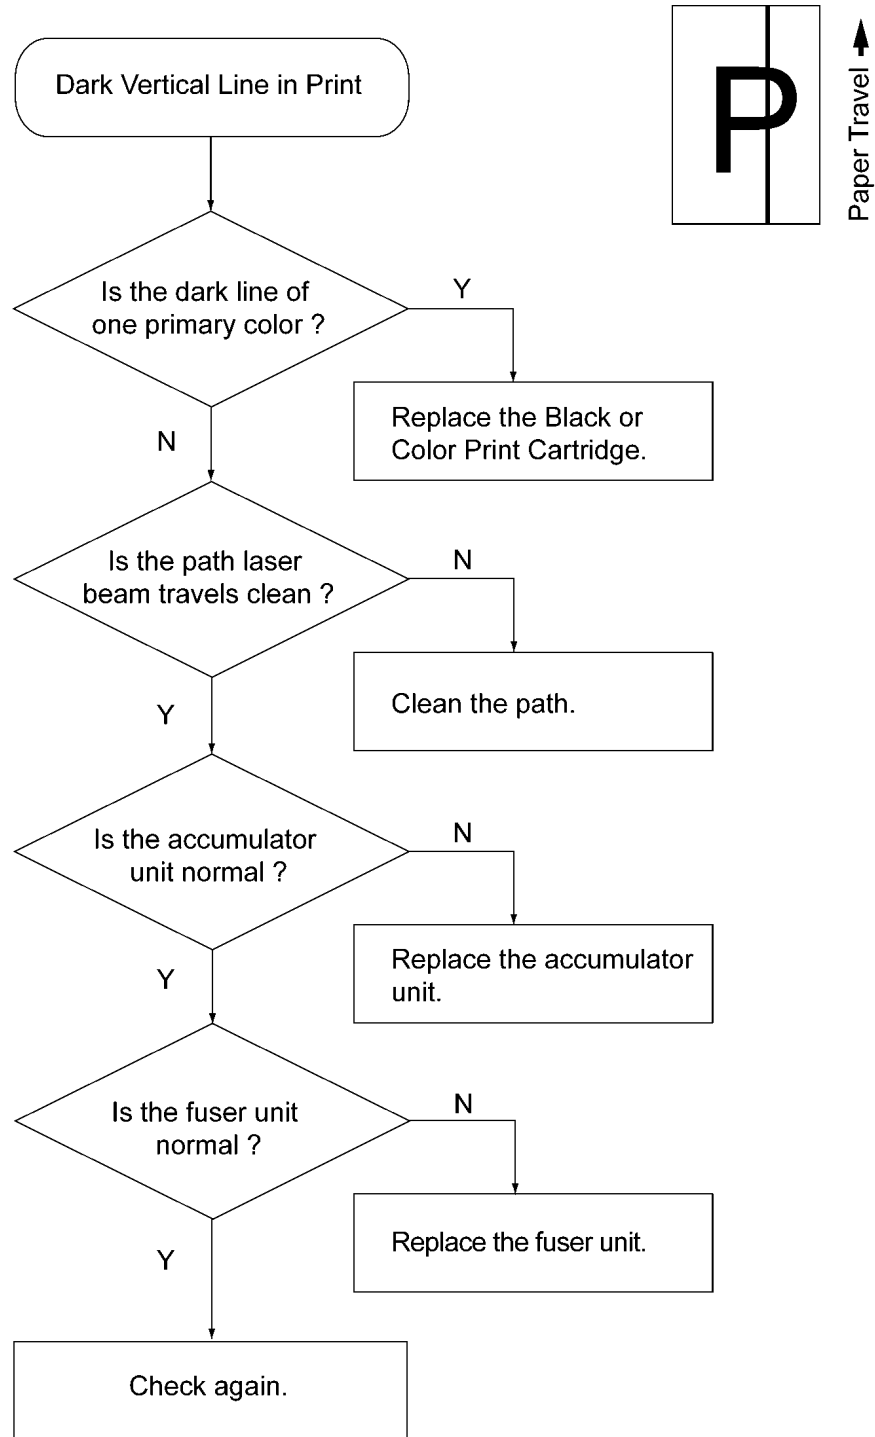

13.4.5. Repeated spots or lines on print in-line with each other

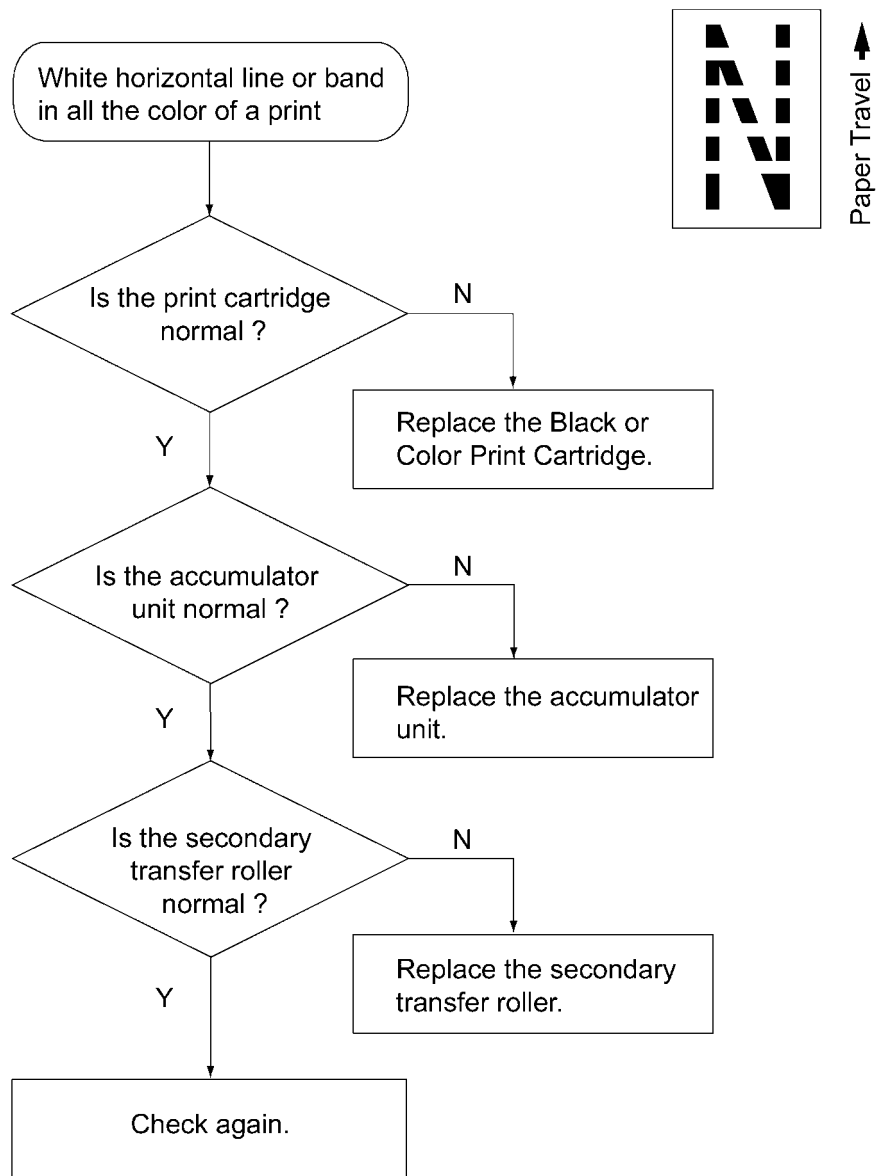

Space	Possible cause and remedy.
28.3 mm (1.114 inch)	Accumulator Tension Roller defect. Replace the Accumulator unit.
31.4 mm (1.236 inch)	Charging Roller defect. Replace the Print Cartridge.
36 mm (1.417 inch)	First Transfer Roller defect. Replace the Accumulator unit.
38 mm (1.496 inch)	Developer Roller defect. Replace the Print Cartridge.
44.7 mm (1.759 inch)	Accumulator Drive Roller defect. Replace the Accumulator unit.
45.6 mm (1.795 inch)	Disposal Toner Screw defect. Replace the Print Cartridge.
46.2 mm (1.82 inch)	Registration Roller defect. Replace the Registration Roller.
69.1 mm (2.721 inch)	Secondary Transfer Roller defect. Replace the Second Transfer Roller.
74.5 mm (2.933 inch)	Supply Roller defect. Replace the Print Cartridge.
75.4 mm (2.968 inch)	OPC Drum defect. Replace the Print Cartridge.
75.4 mm (2.968 inch)	Accumulator Idle Roller defect. Replace the Accumulator unit.
95.0 mm (3.740 inch)	Pressure Roller defect. Replace the Fuser unit.
142 mm (5.6 inch)	Fuser Belt defect. Replace the Fuser unit.

* The distance between the repeating spots indicates the source of the problem.

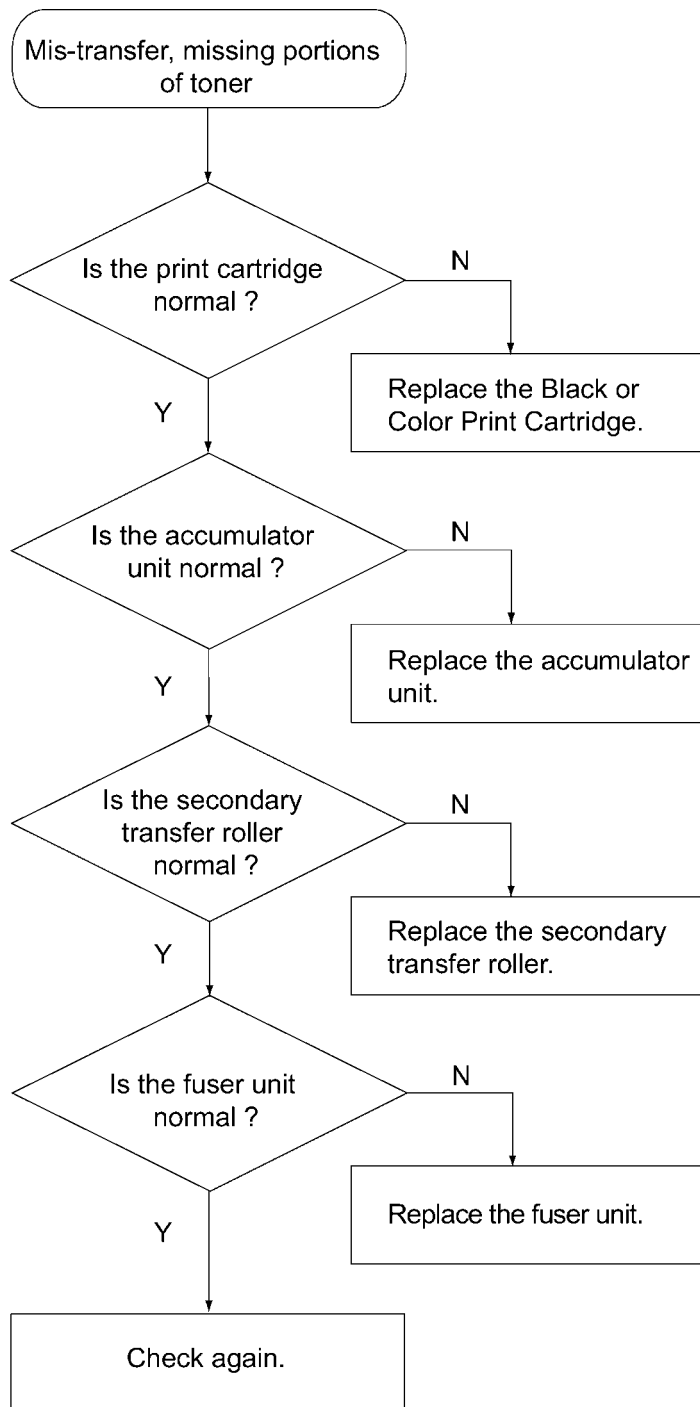

13.4.6. Dark Vertical Line in Print

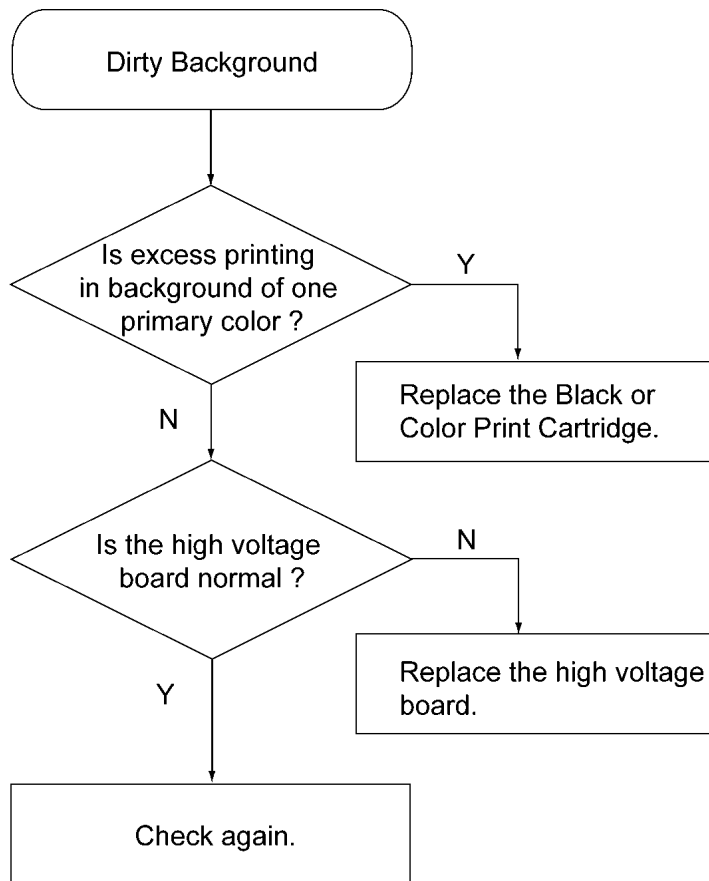

13.4.7. White horizontal line or band in all the color of a print

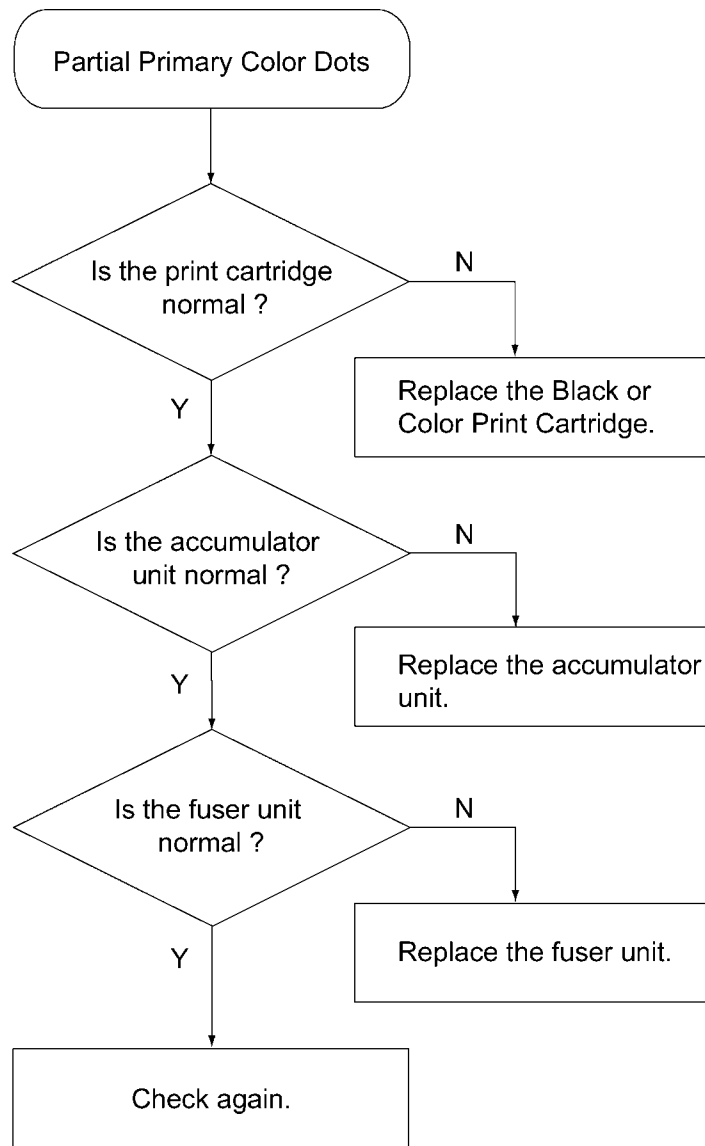

13.4.8. Mis-transfer, missing portions of toner

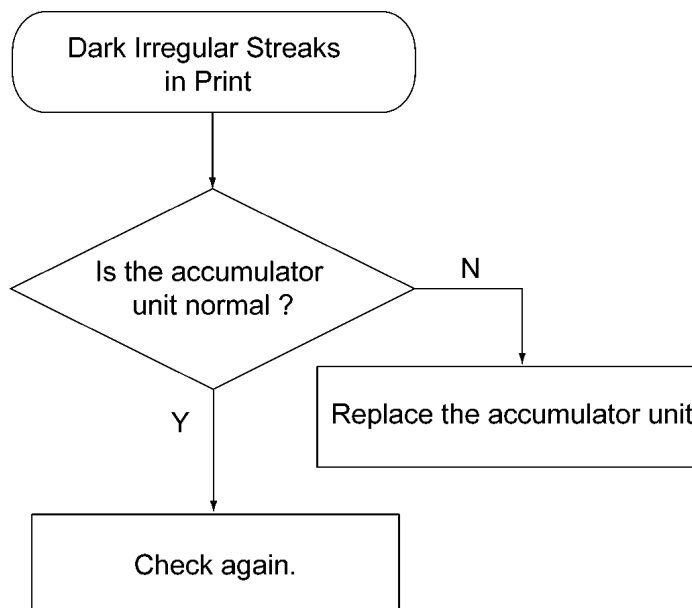

13.4.9. Dirty Background

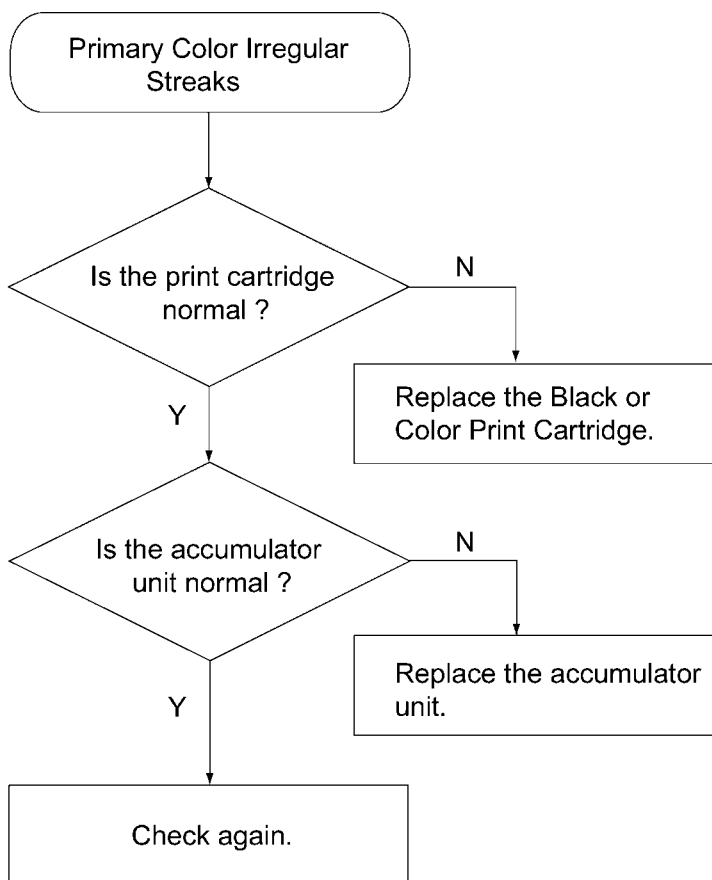

13.4.10. Partial Primary Color Dots

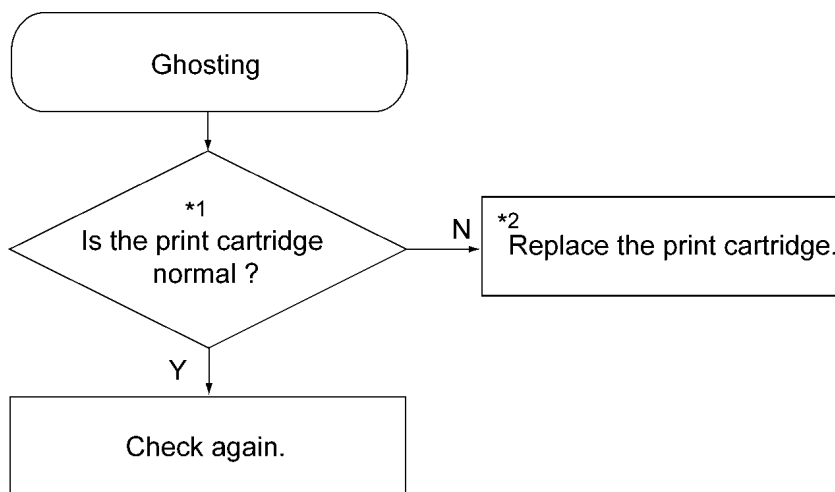

13.4.11. Dark Irregular Streaks in Print

13.4.12. Primary Color Irregular Streaks

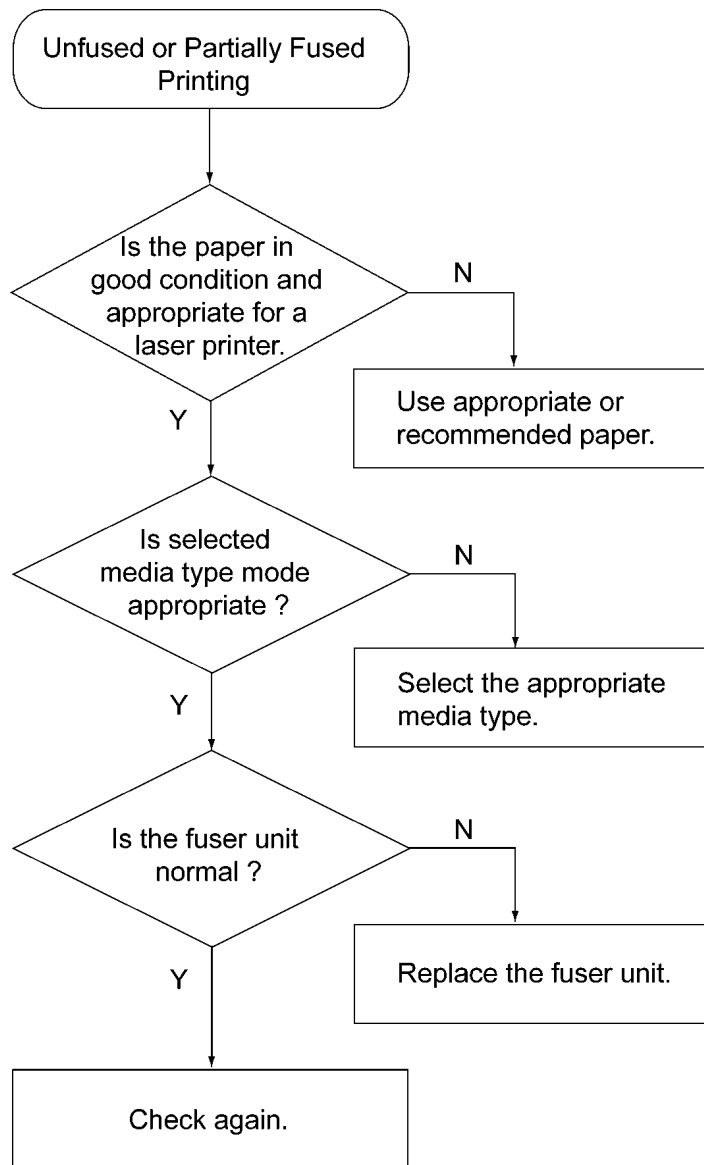

13.4.13. Ghosting

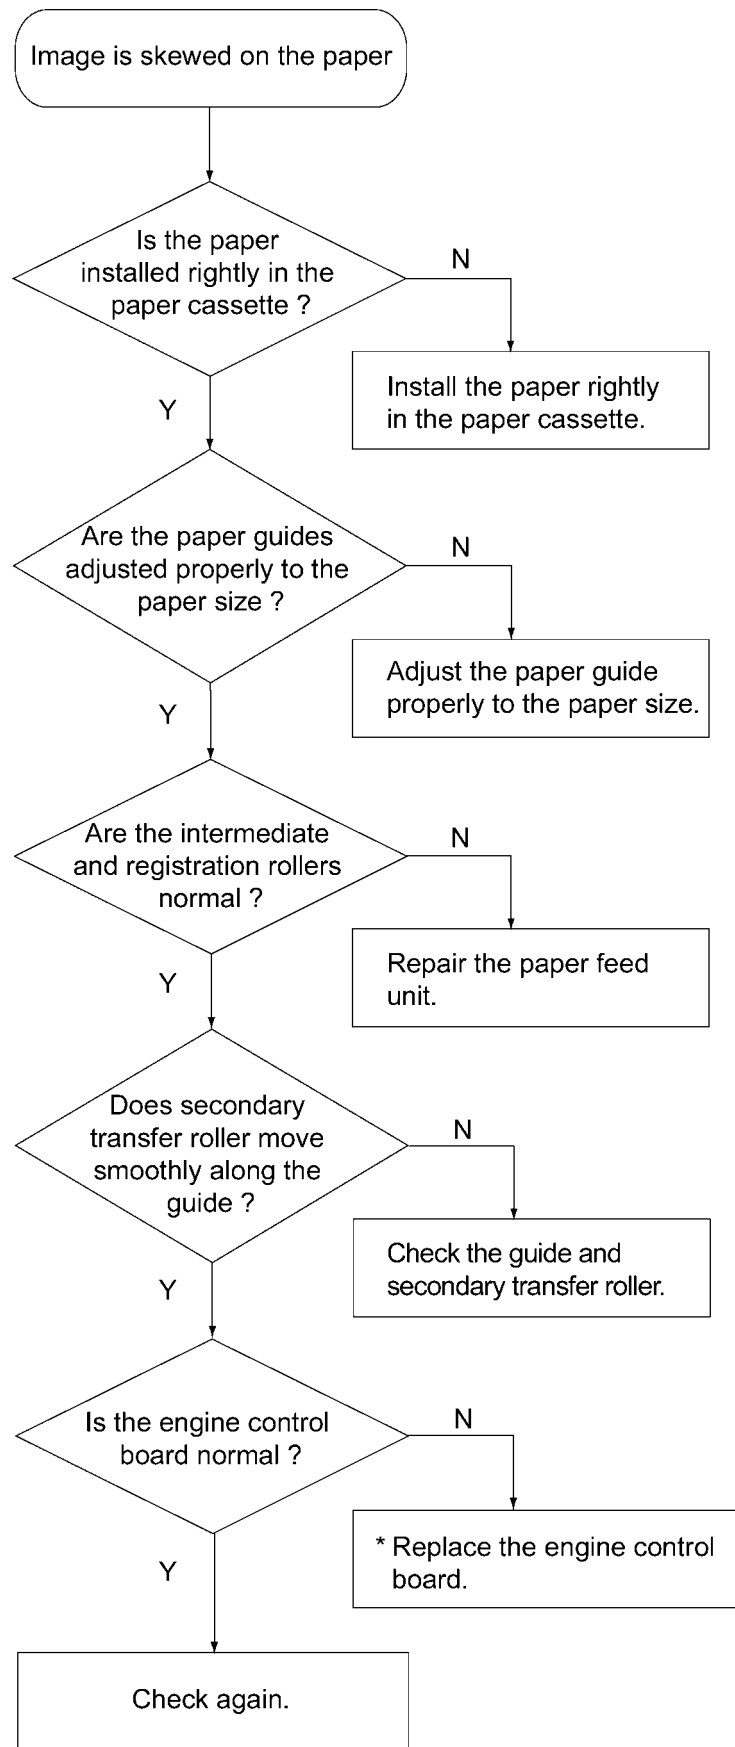

^{*1} Ghosting with some images is unavoidable because of the color structure of the images. If a color is used at one part of the image area and the same color is used again at a later area, it is very possible to get ghosting of the first image into the second image area after one revolution of the developer roller into the print cartridge. This occurs because the charge that is created from the first use of the color was not totally extinguished, a small residual charge remains associated with the color, resulting in the second use of the color to be darker in the same areas as the first image resulting in the first image ghosting into the second image when the same color is issued.

^{*2} A new print cartridge exhibits less ghosting.
Ghosting increase as print cartridges age.

13.4.14. Unfused or Partially Fused Printing

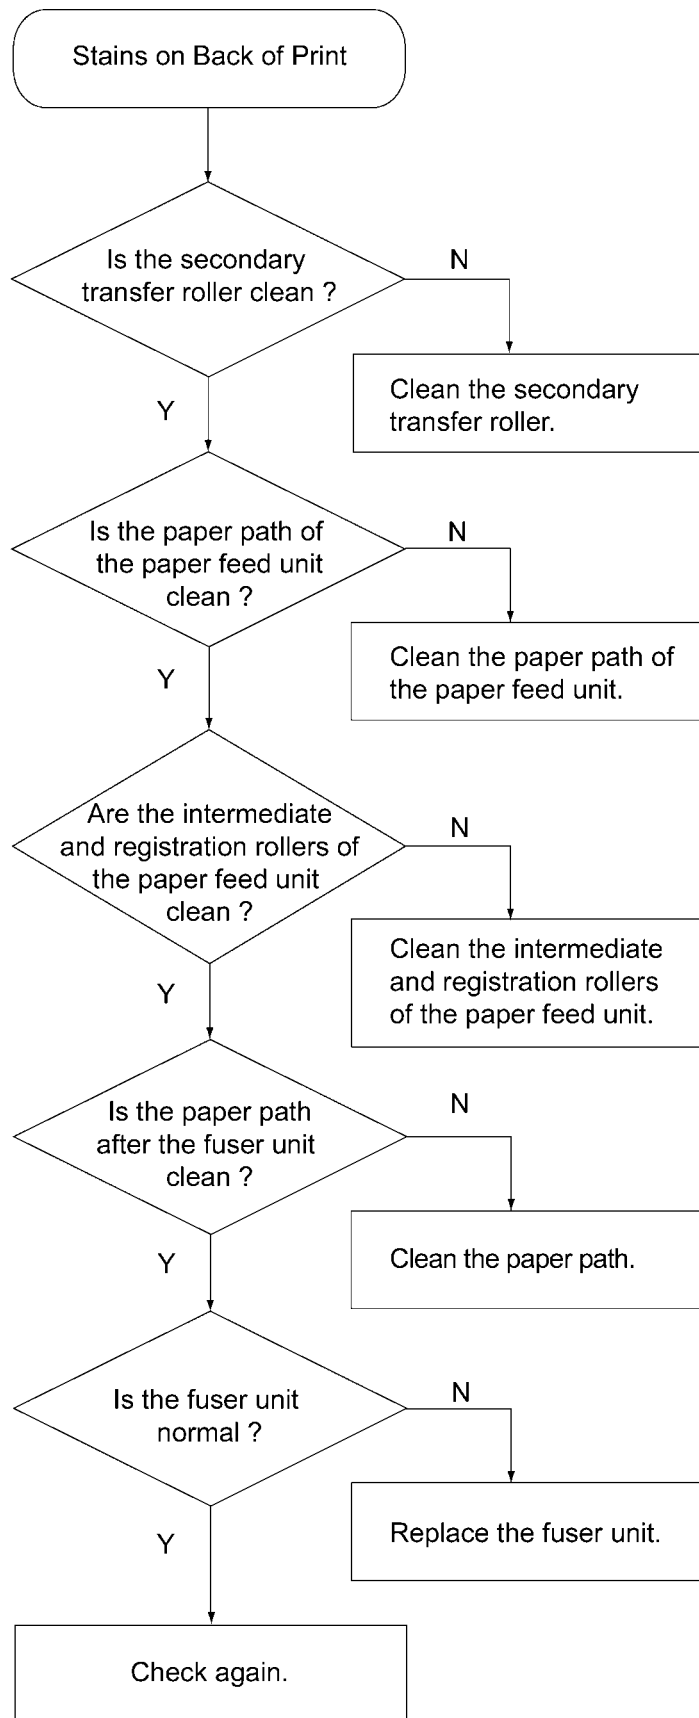

13.4.15. Image is skewed on the paper

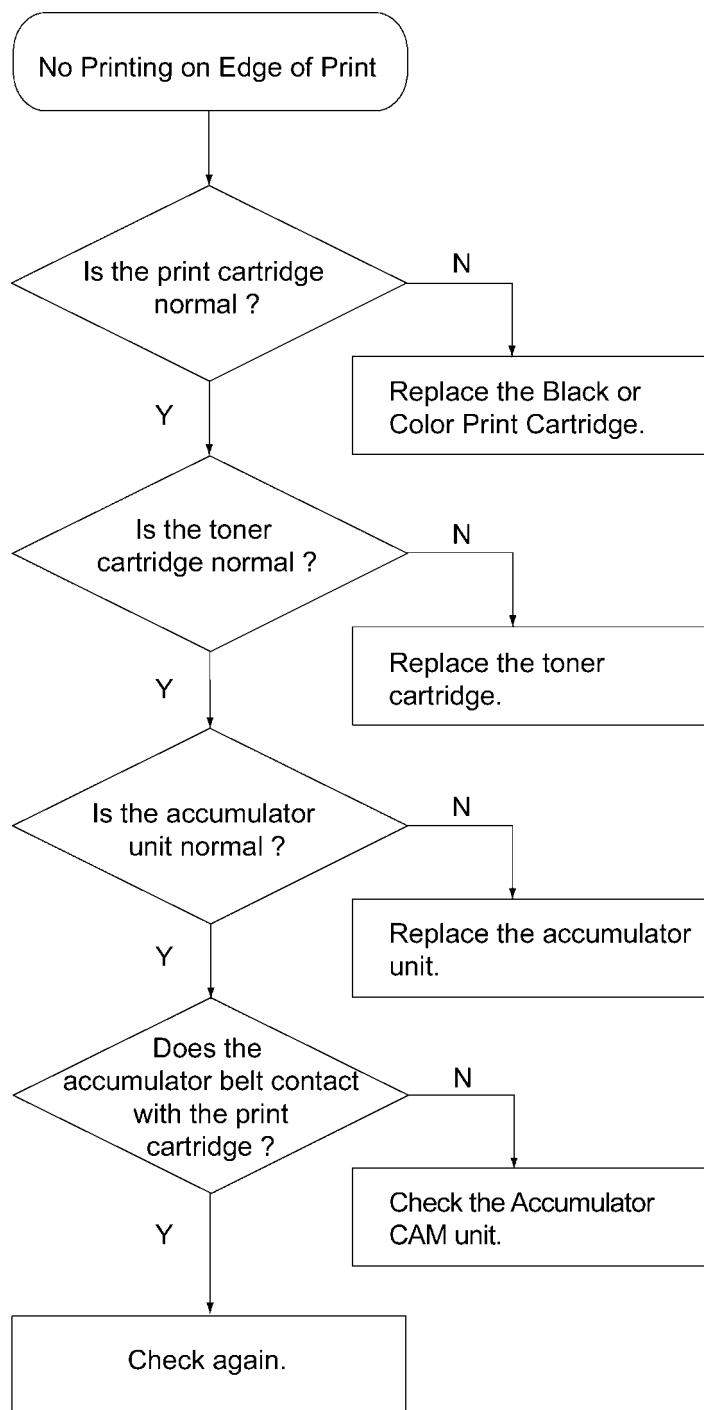

* When replacing the engine control board, remove the EEPROM (IC5) from the original engine control board and install it on the new one.

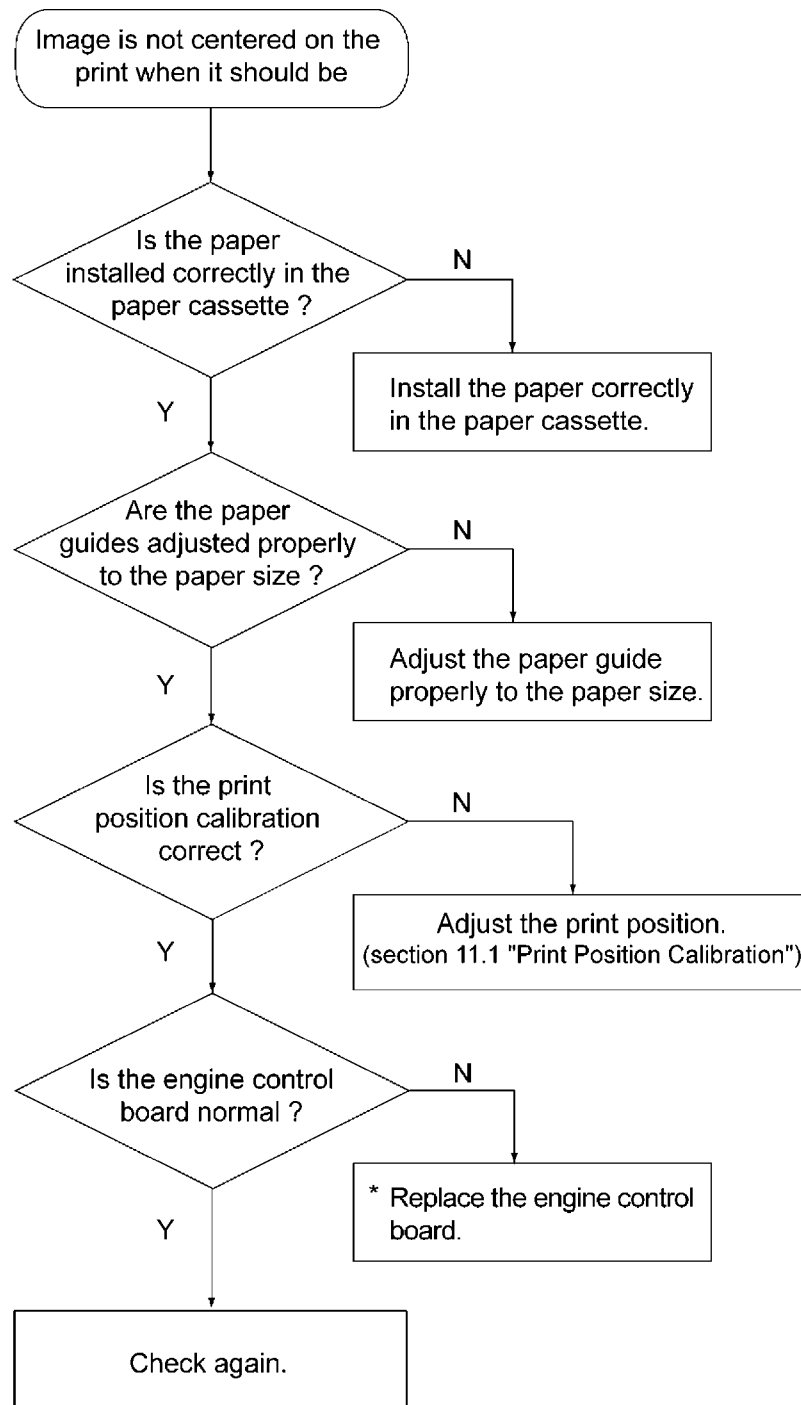

13.4.16. Stains on Back of Print

13.4.17. No Printing on Edge of Print

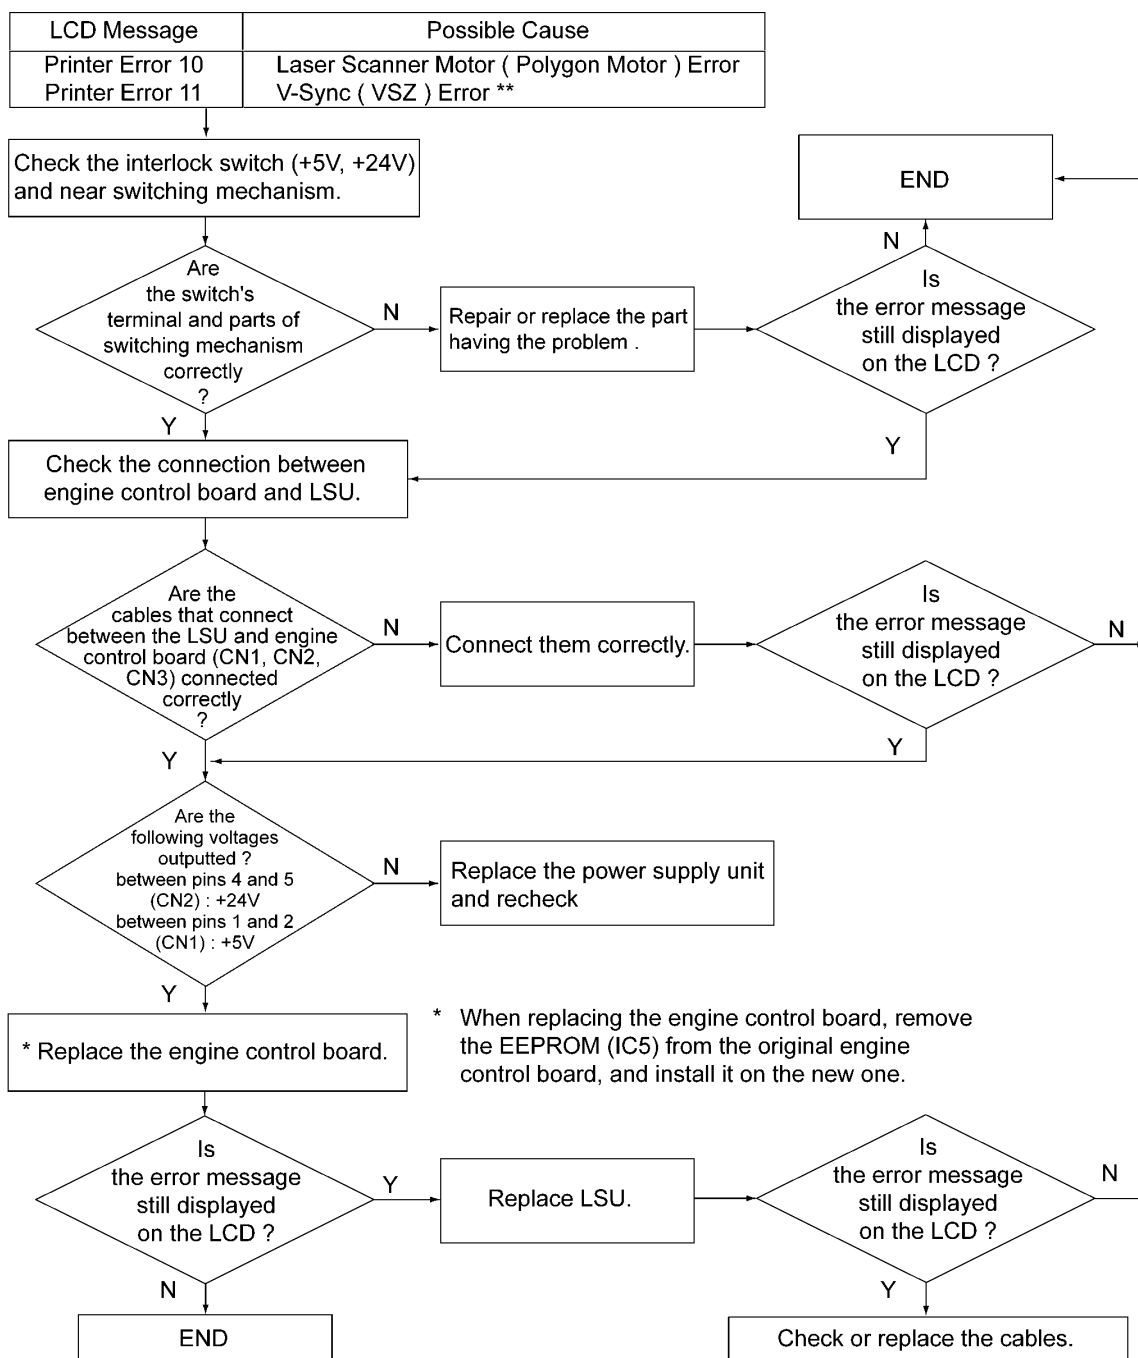

13.4.18. Image is not centered on the print when it should be

* When replacing the engine control board, remove the EEPROM (IC5) from the original engine control board and install it on the new one.

13.5. Printer Error (Call Service)

13.5.1. Printer Error 10 and Printer Error 11

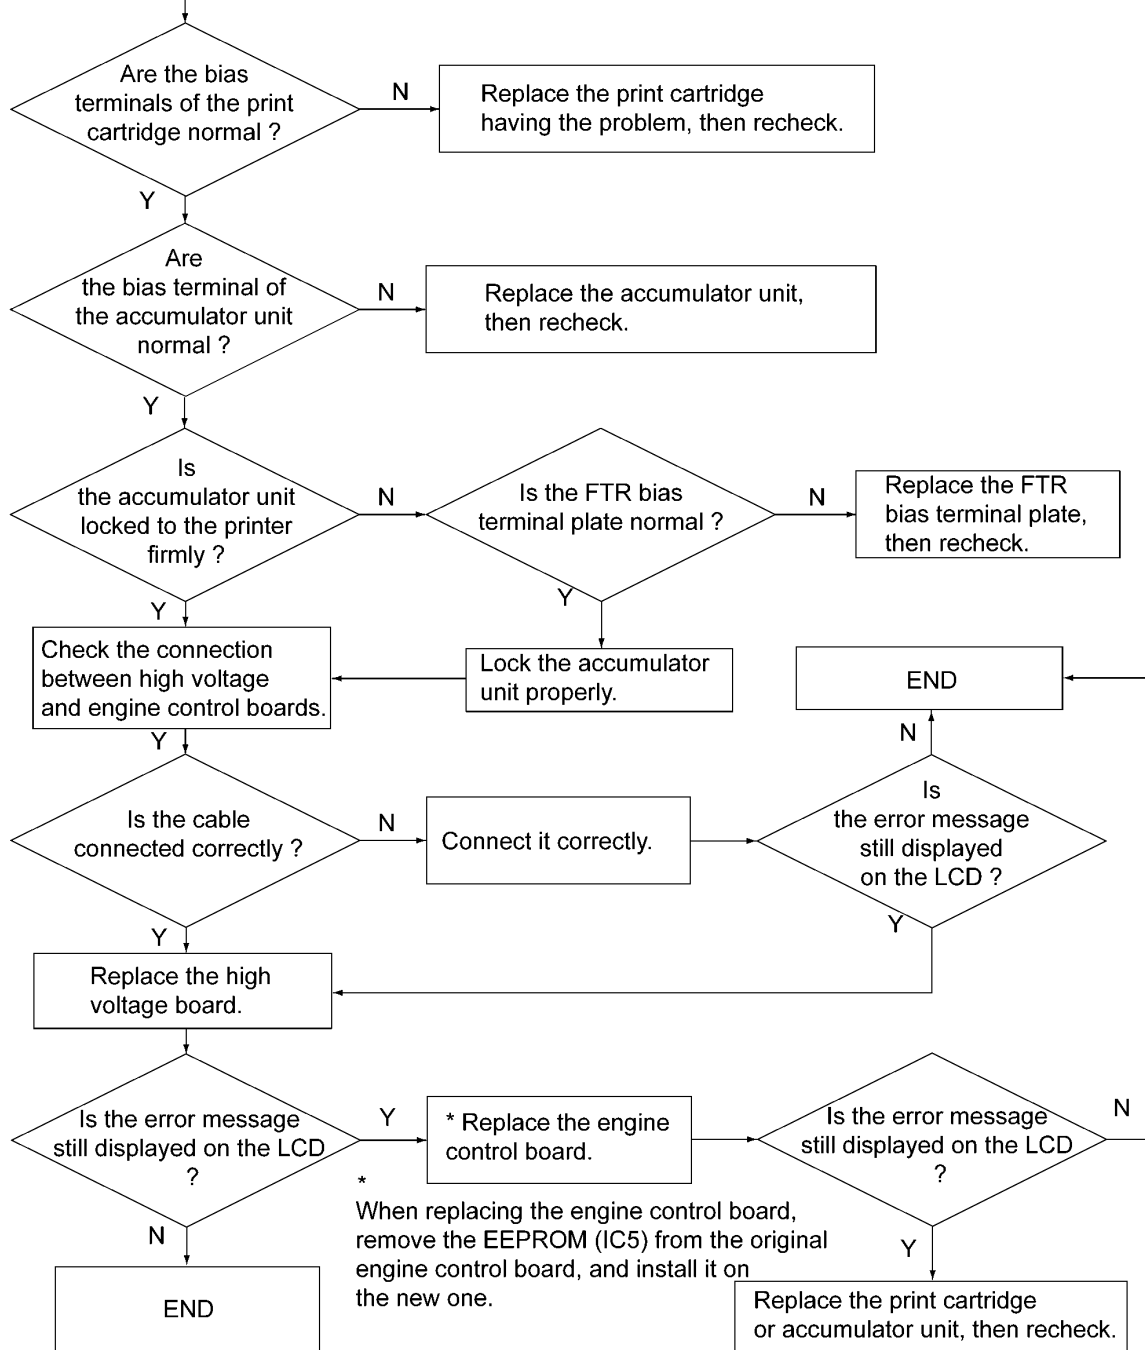

**

When the printer is exposed to a low temperature environment for a long time and is suddenly placed under a normal temperature environment, condensation may occur in the printer. As a result, a printer error may occur. Use care to prevent condensation in the printer. If condensation occurs on the optical lens of the LSU, printer error 11 may occur. After drying the printer, please recheck.

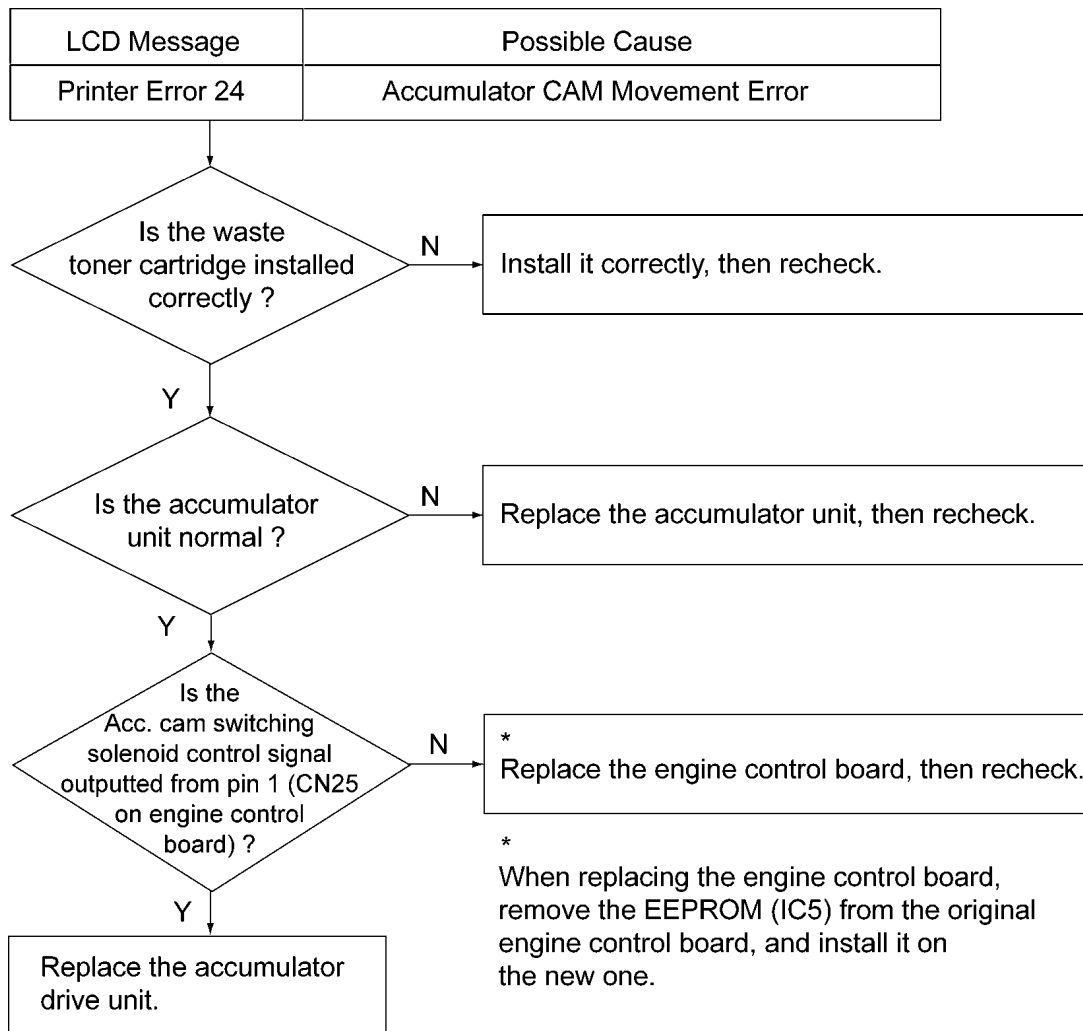

13.5.2. Printer Error 20

LCD Message	Possible Cause
Printer Error 20	Charger Error **

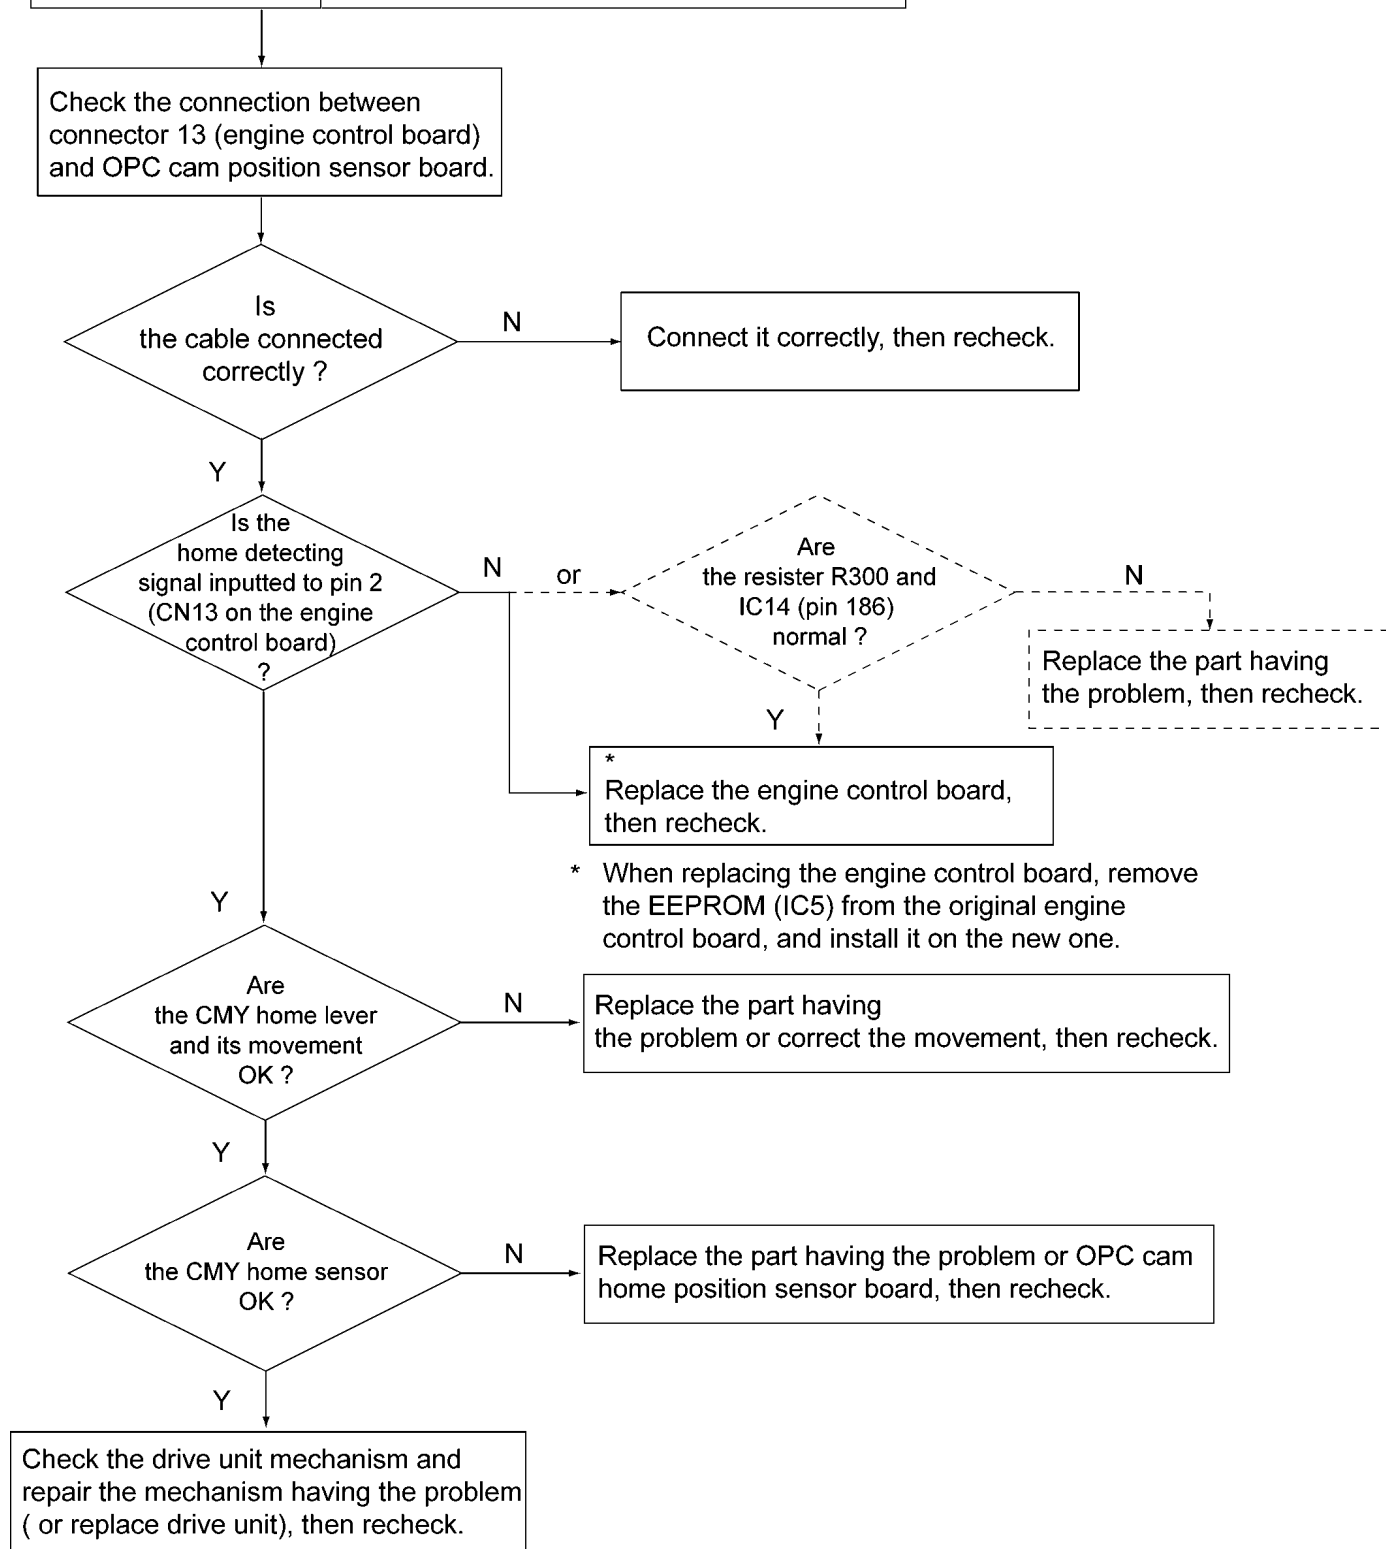

When the printer is exposed to a low temperature environment for a long time and is suddenly placed under a normal temperature environment, condensation may occur in the printer. As a result, a printer error may occur. Use care to prevent condensation in the printer. If condensation occurs on/in the print cartridge, printer error 20 may occur. After drying the printer, please recheck.

13.5.3. Printer Error 24

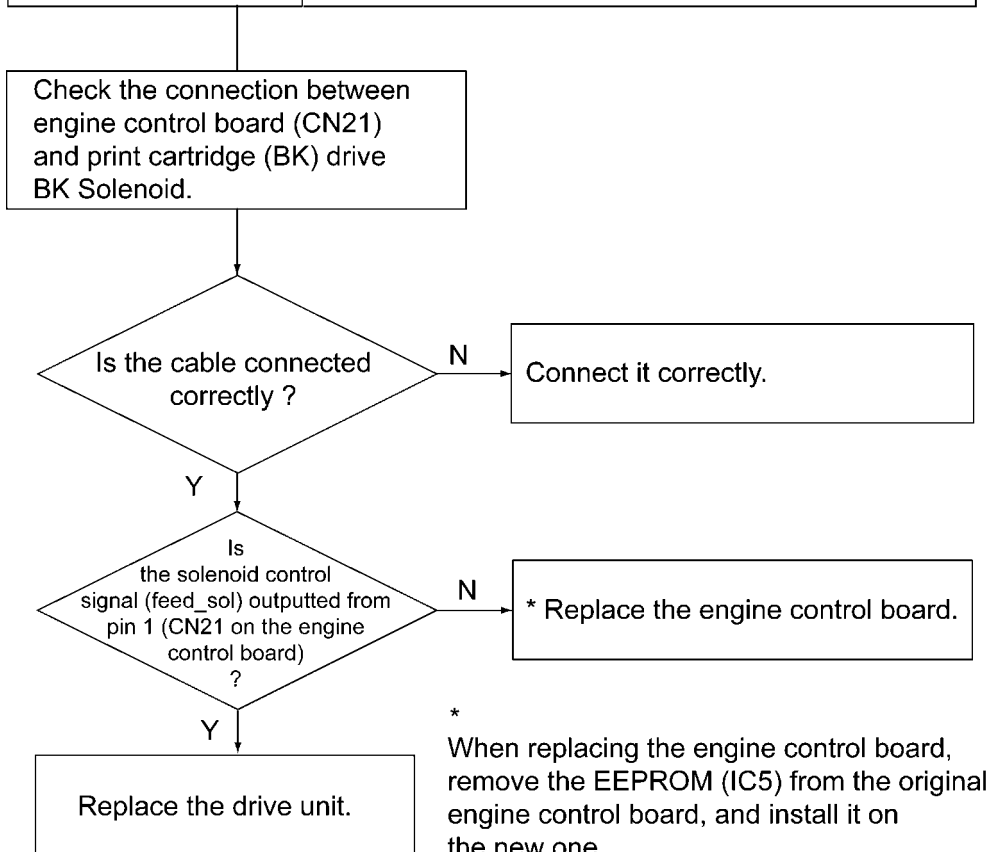

13.5.4. Printer Error 35

LCD Message	Possible Cause
Printer Error 35	Color Print Cartridge home detection error

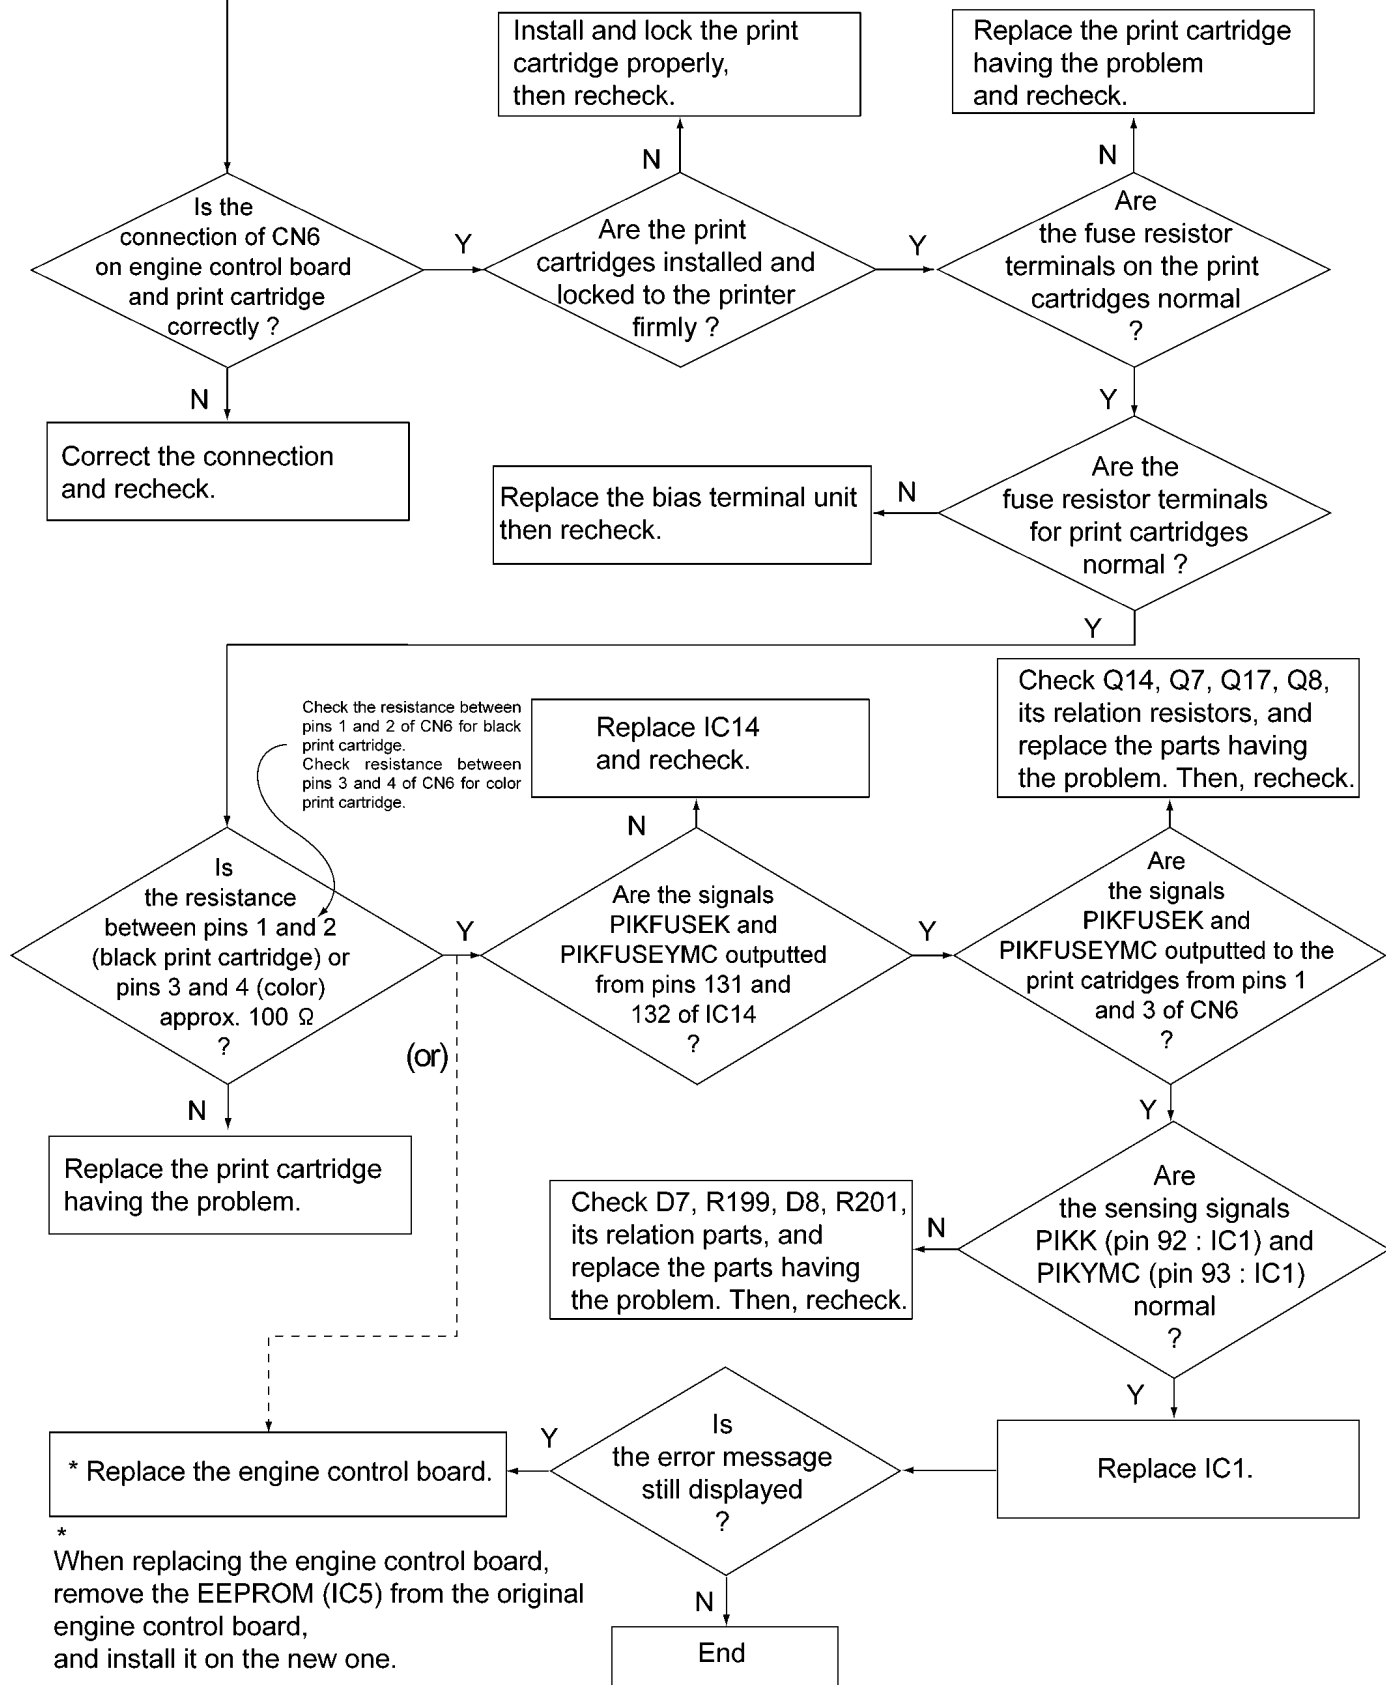

13.5.5. Printer Error 36

LCD Message	Possible Cause
Printer Error 36	Print Cartridge (BK) drive BK Solenoid error

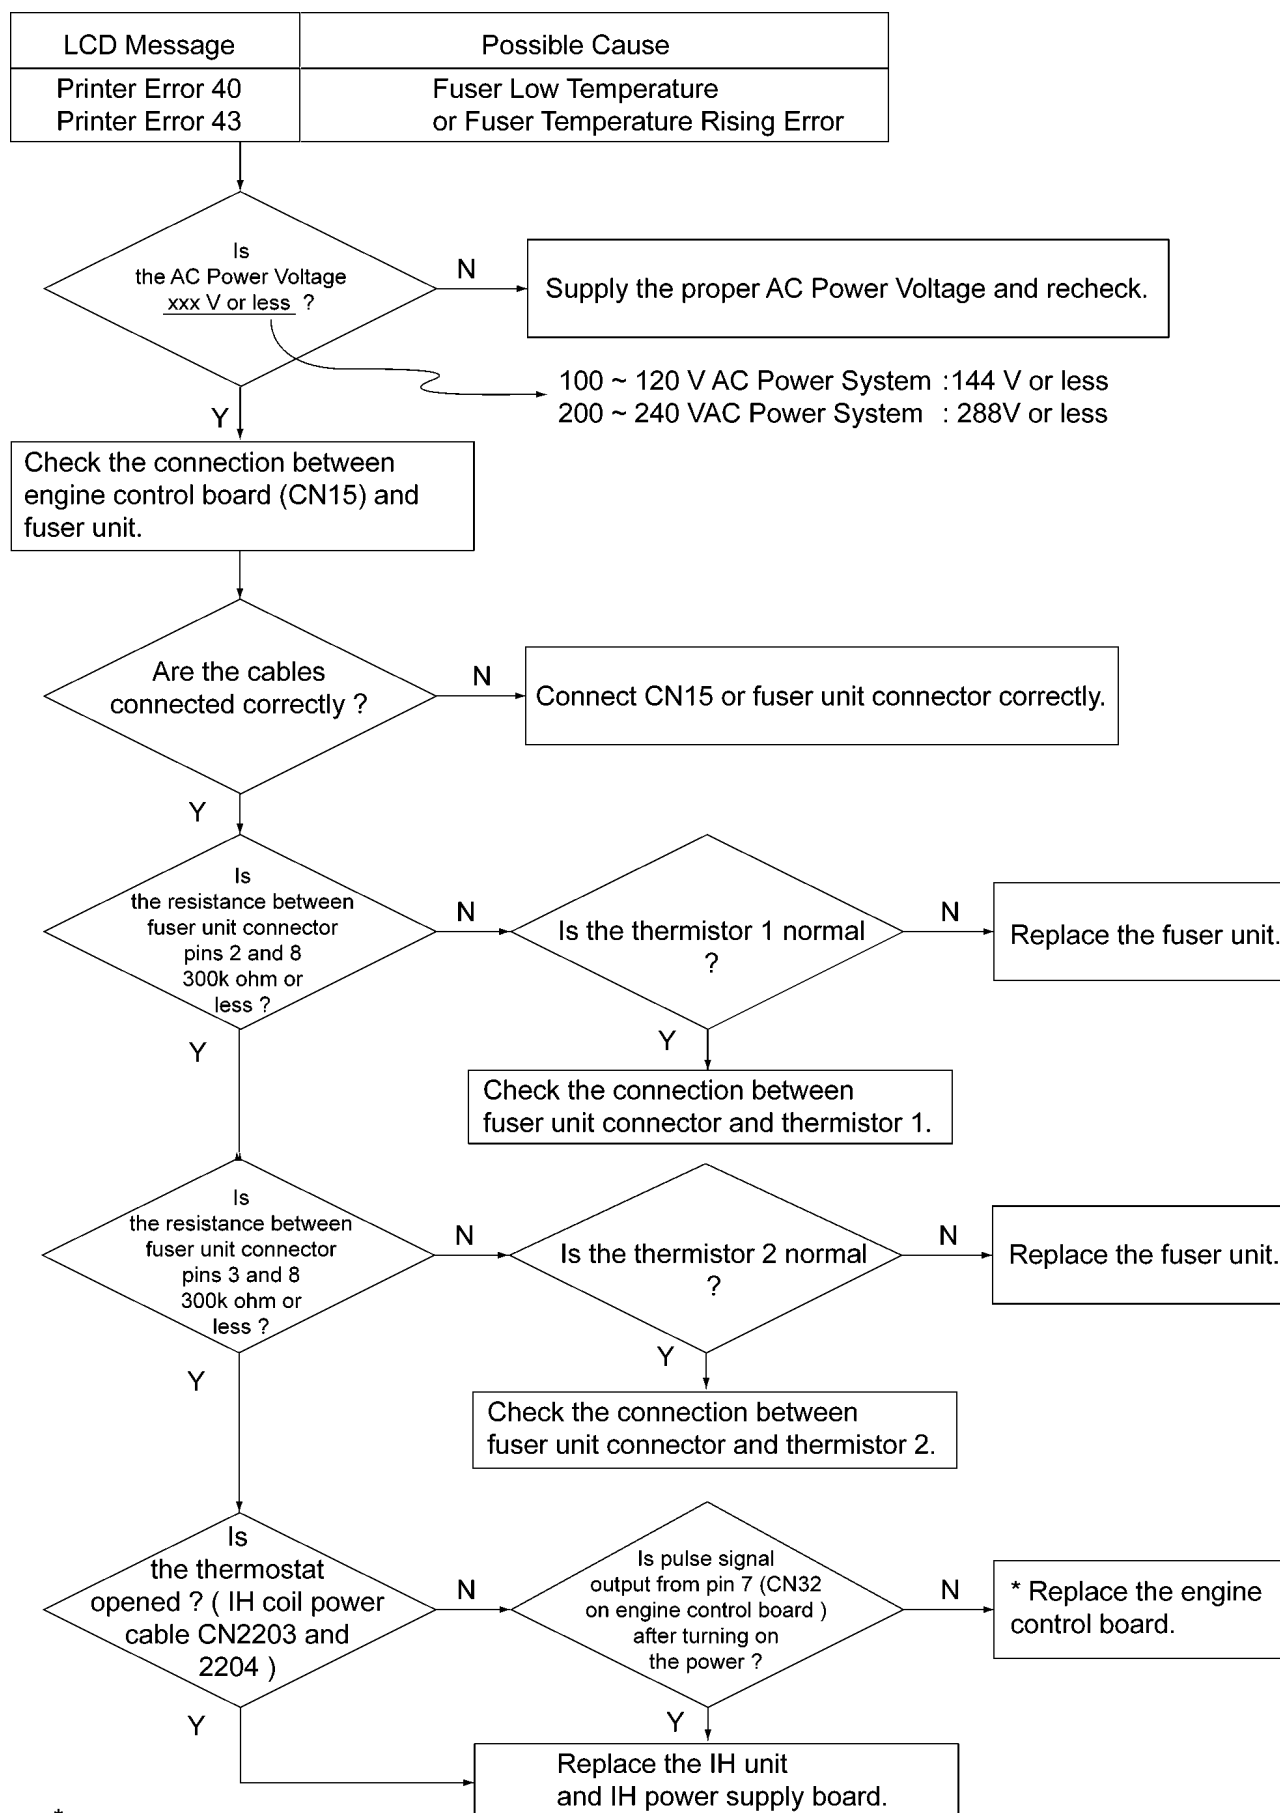

13.5.6. Printer Error 37 and Printer Error 38

LCD Message	Possible Cause
Printer Error 37 Printer Error 38	The virgin detection fuse is not blown out correctly.

13.5.7. Printer Error 40 and Printer Error 43

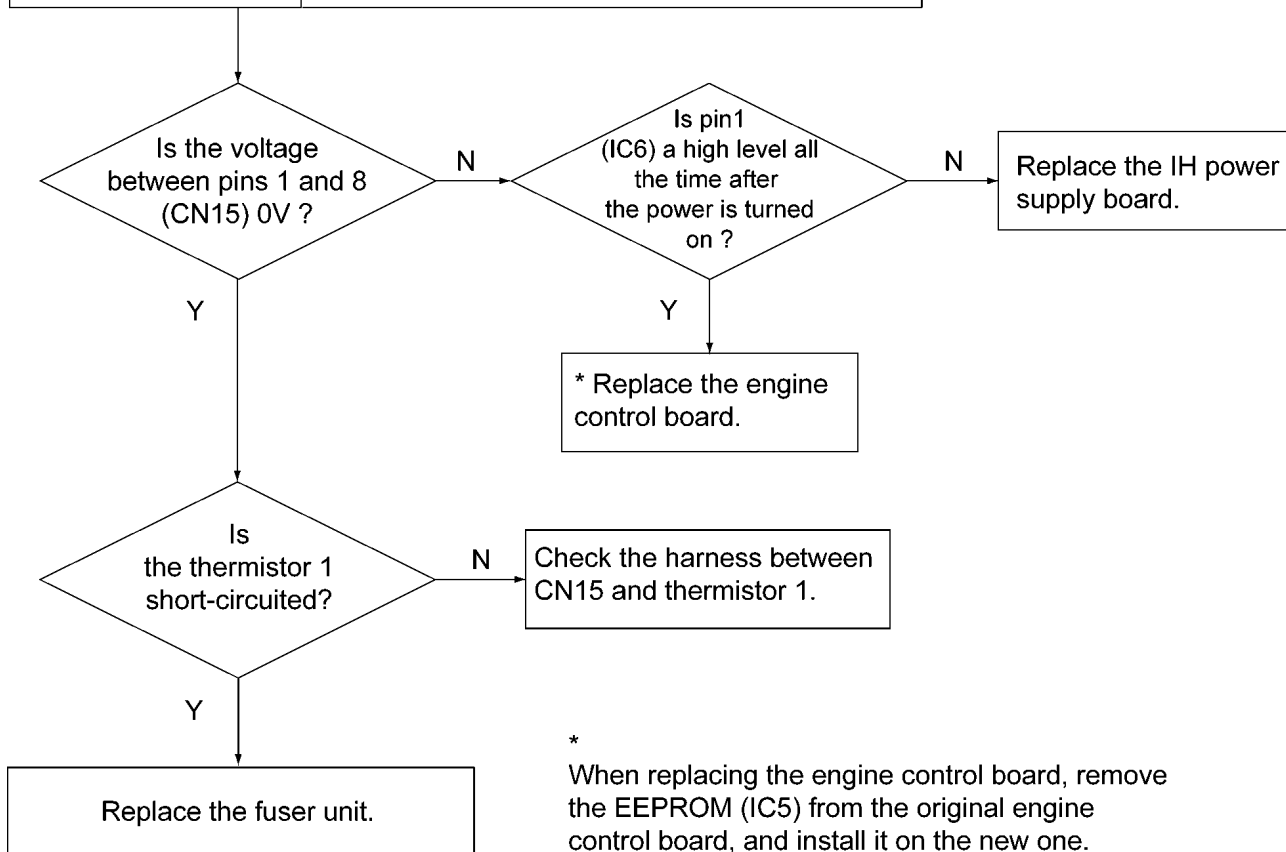

*

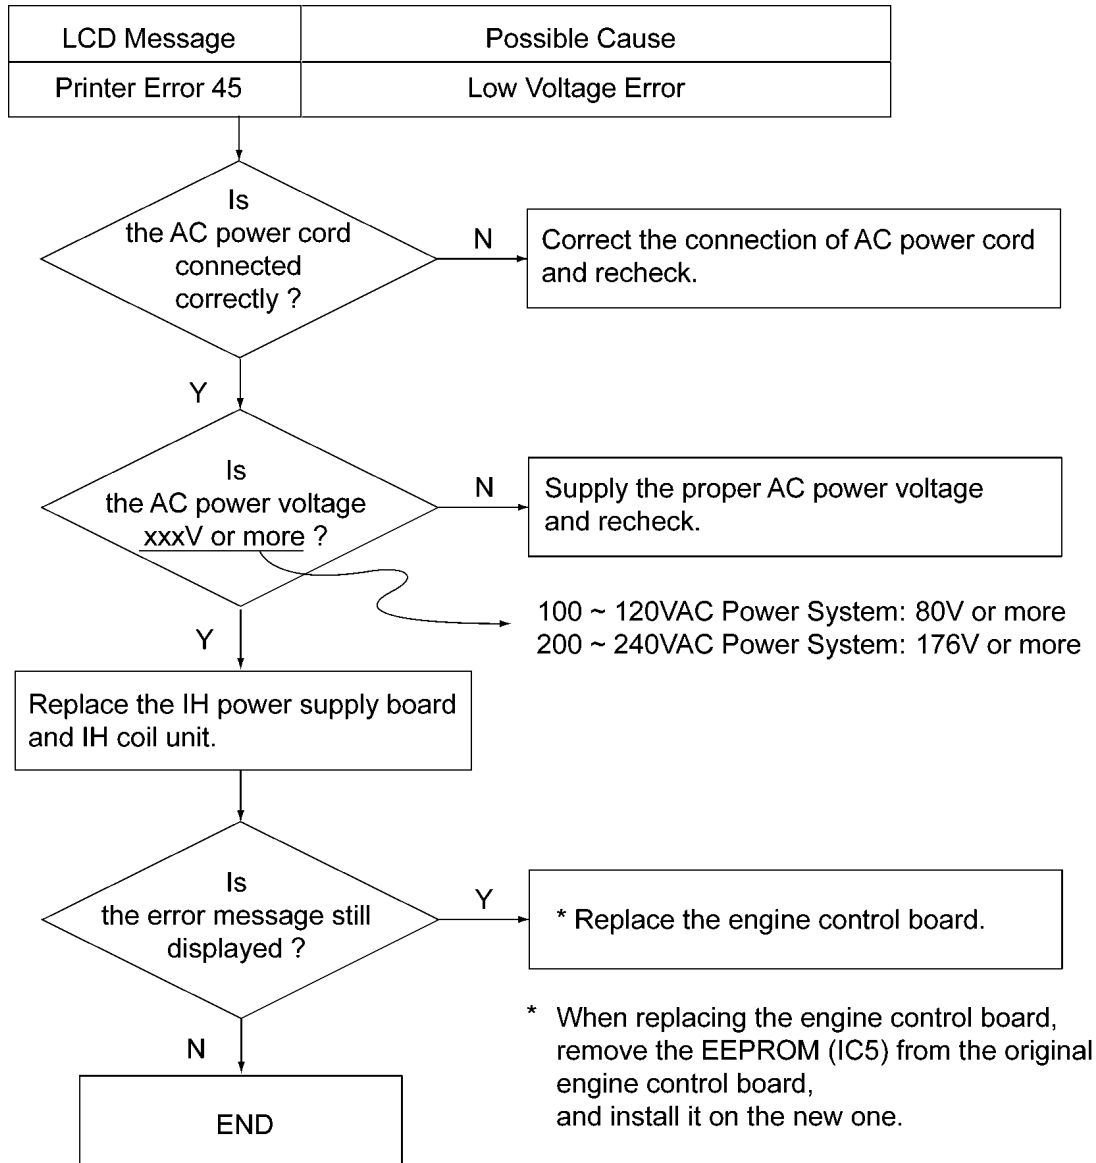

When replacing the engine control board, remove the EEPROM (IC5) from the original engine control board, and install it on the new one.

13.5.8. Printer Error 41

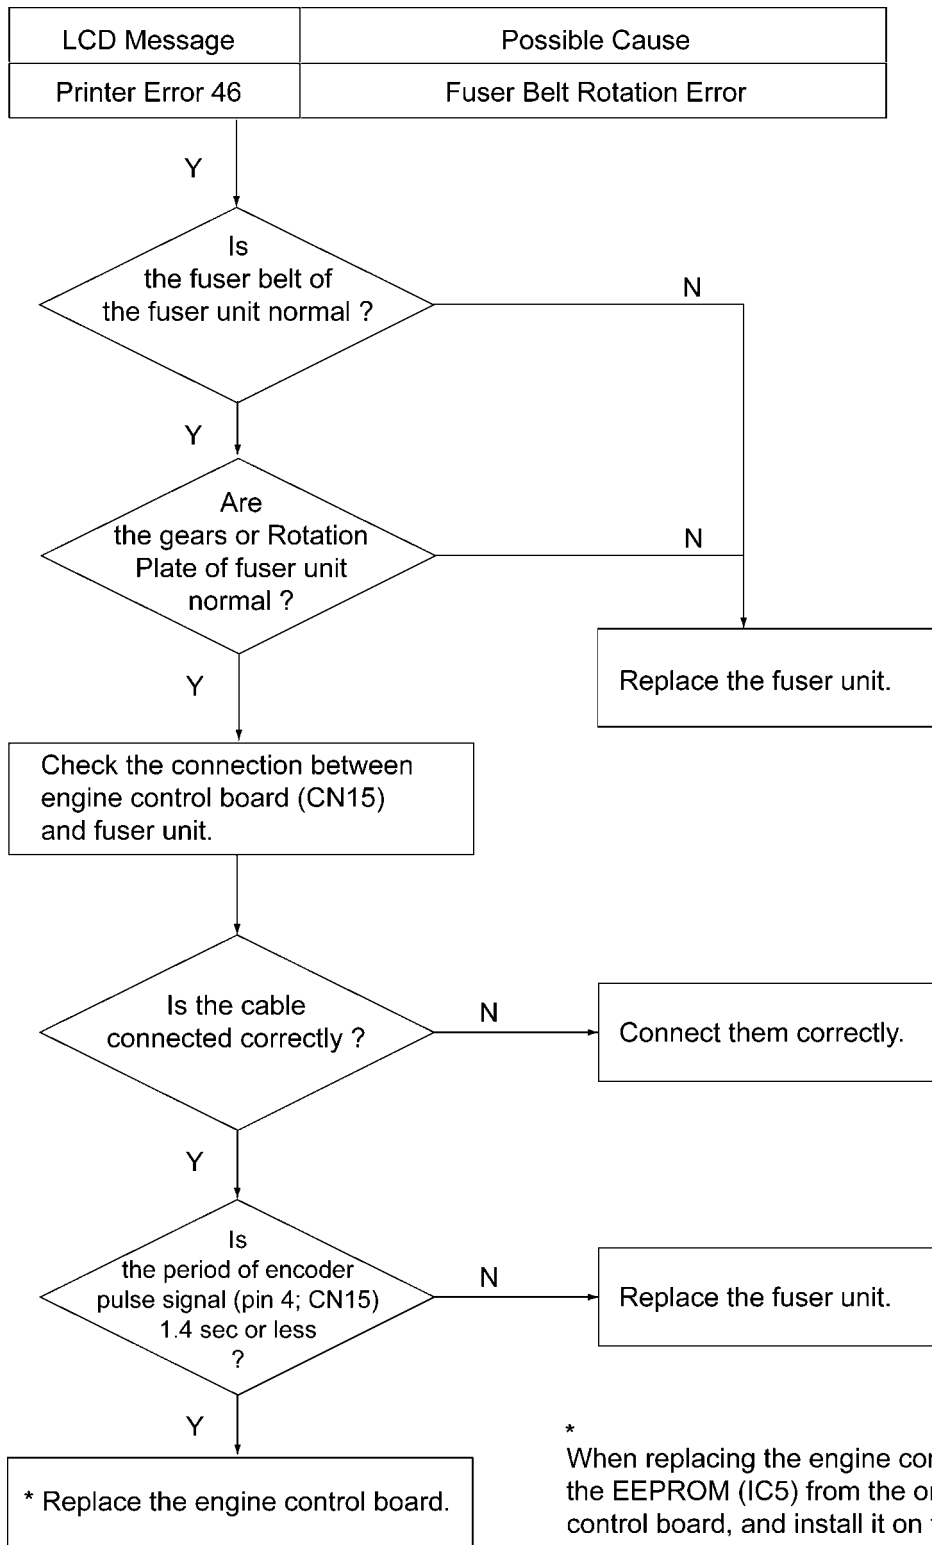

LCD Message	Possible Cause
Printer Error 41	Fuser High Temperature Error

13.5.9. Printer Error 45

13.5.10. Printer Error 46

13.5.11. Printer Error 47

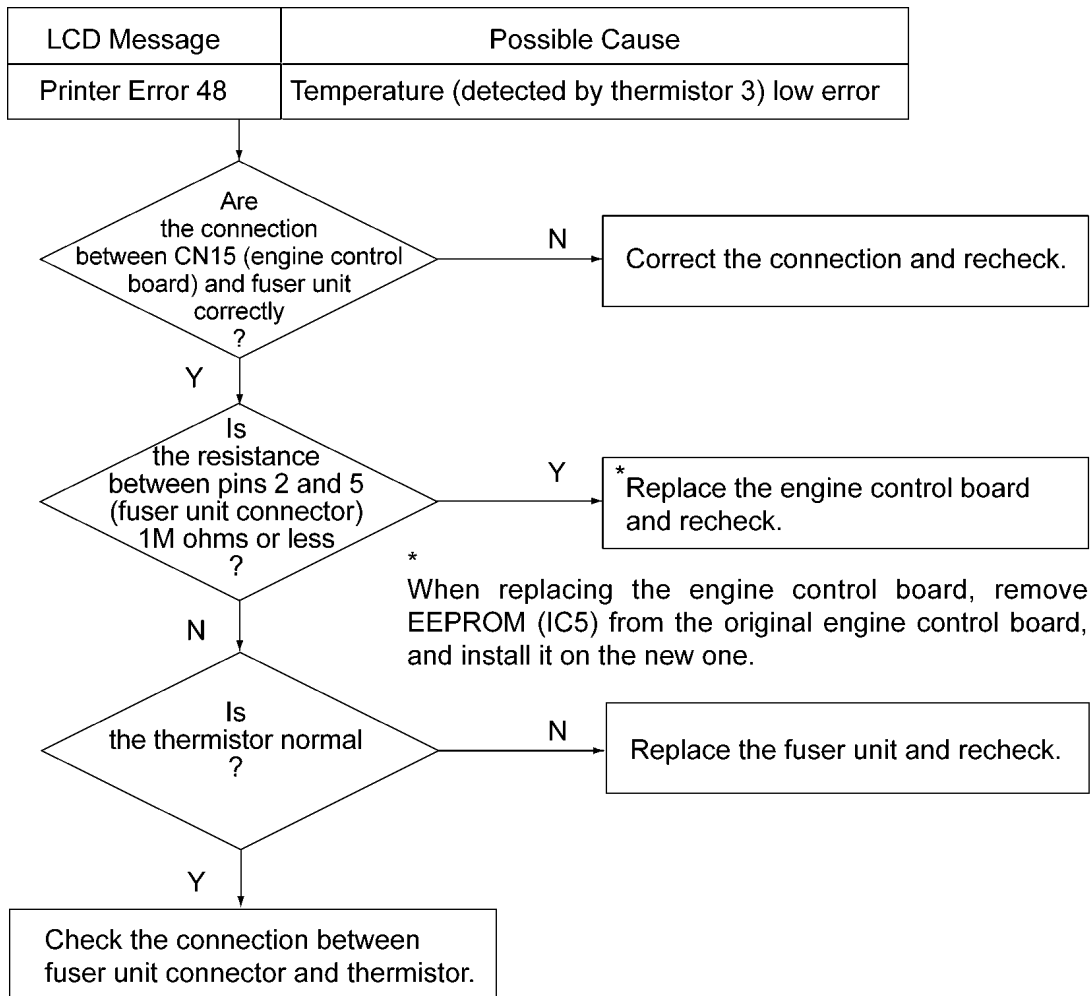

LCD Message	Possible Cause
Printer Error 47	Solenoid drive transistor short circuit

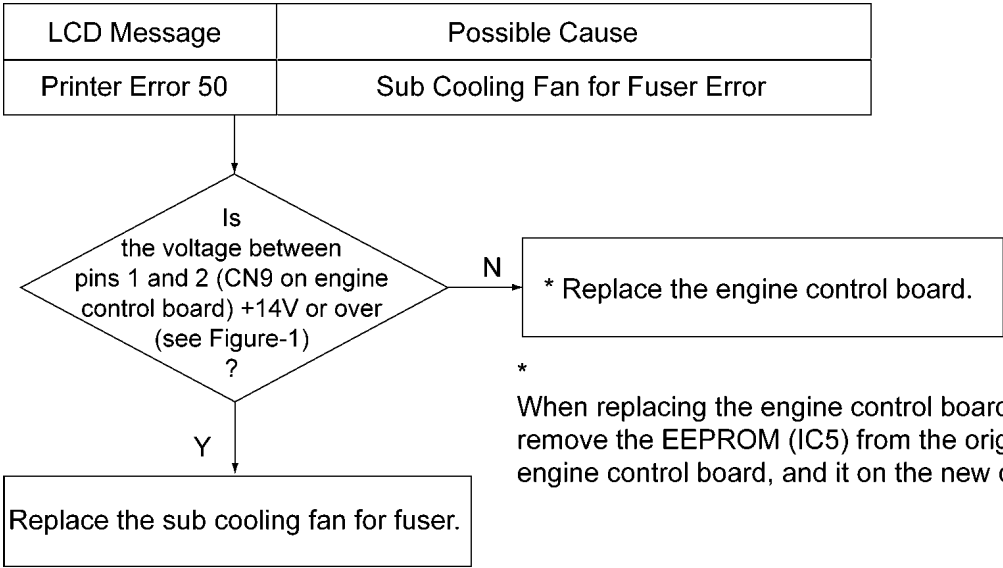

Replace the engine control board.

When replacing the engine control board, remove the EEPROM (IC5) from the original engine control board, and it on the new one.

13.5.12. Printer Error 48

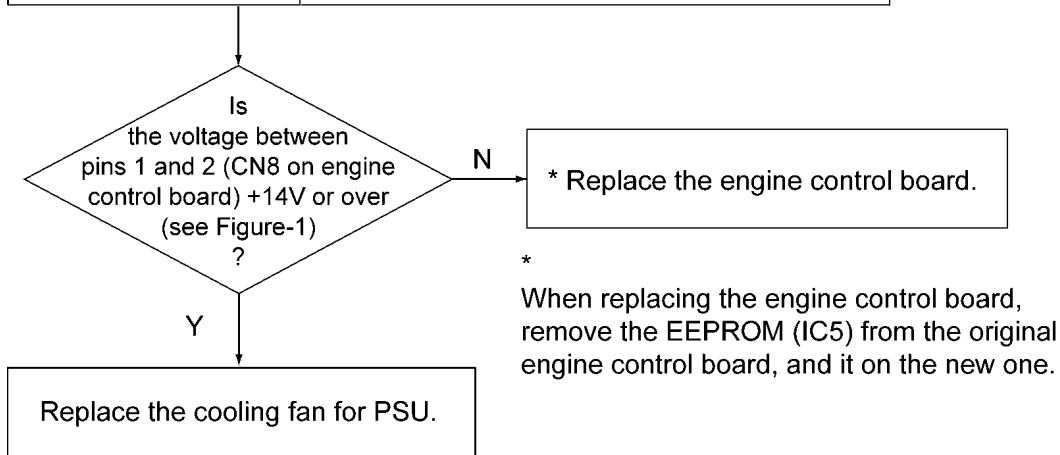

13.5.13. Printer Error 50

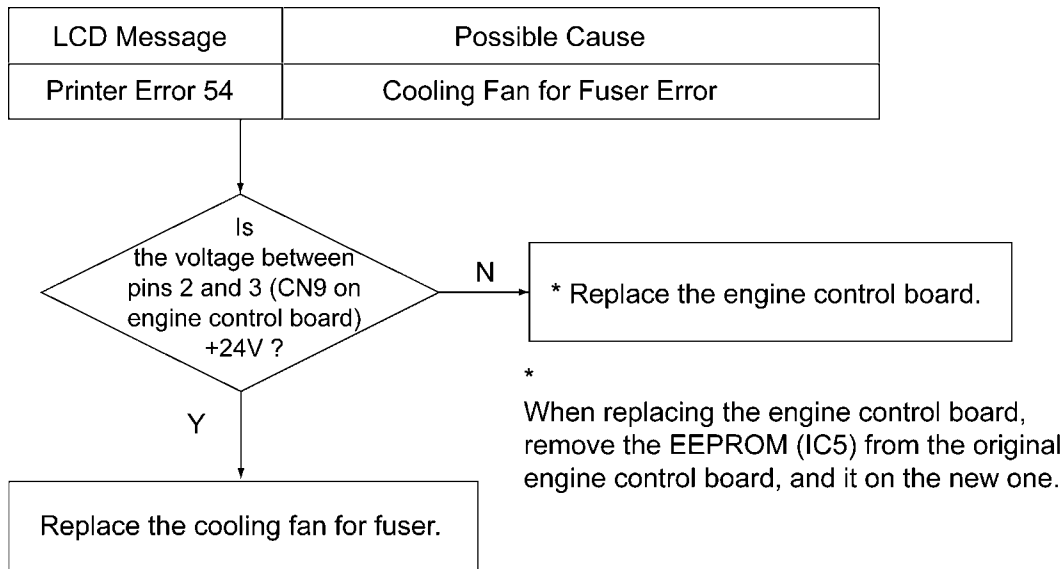

13.5.14. Printer Error 53

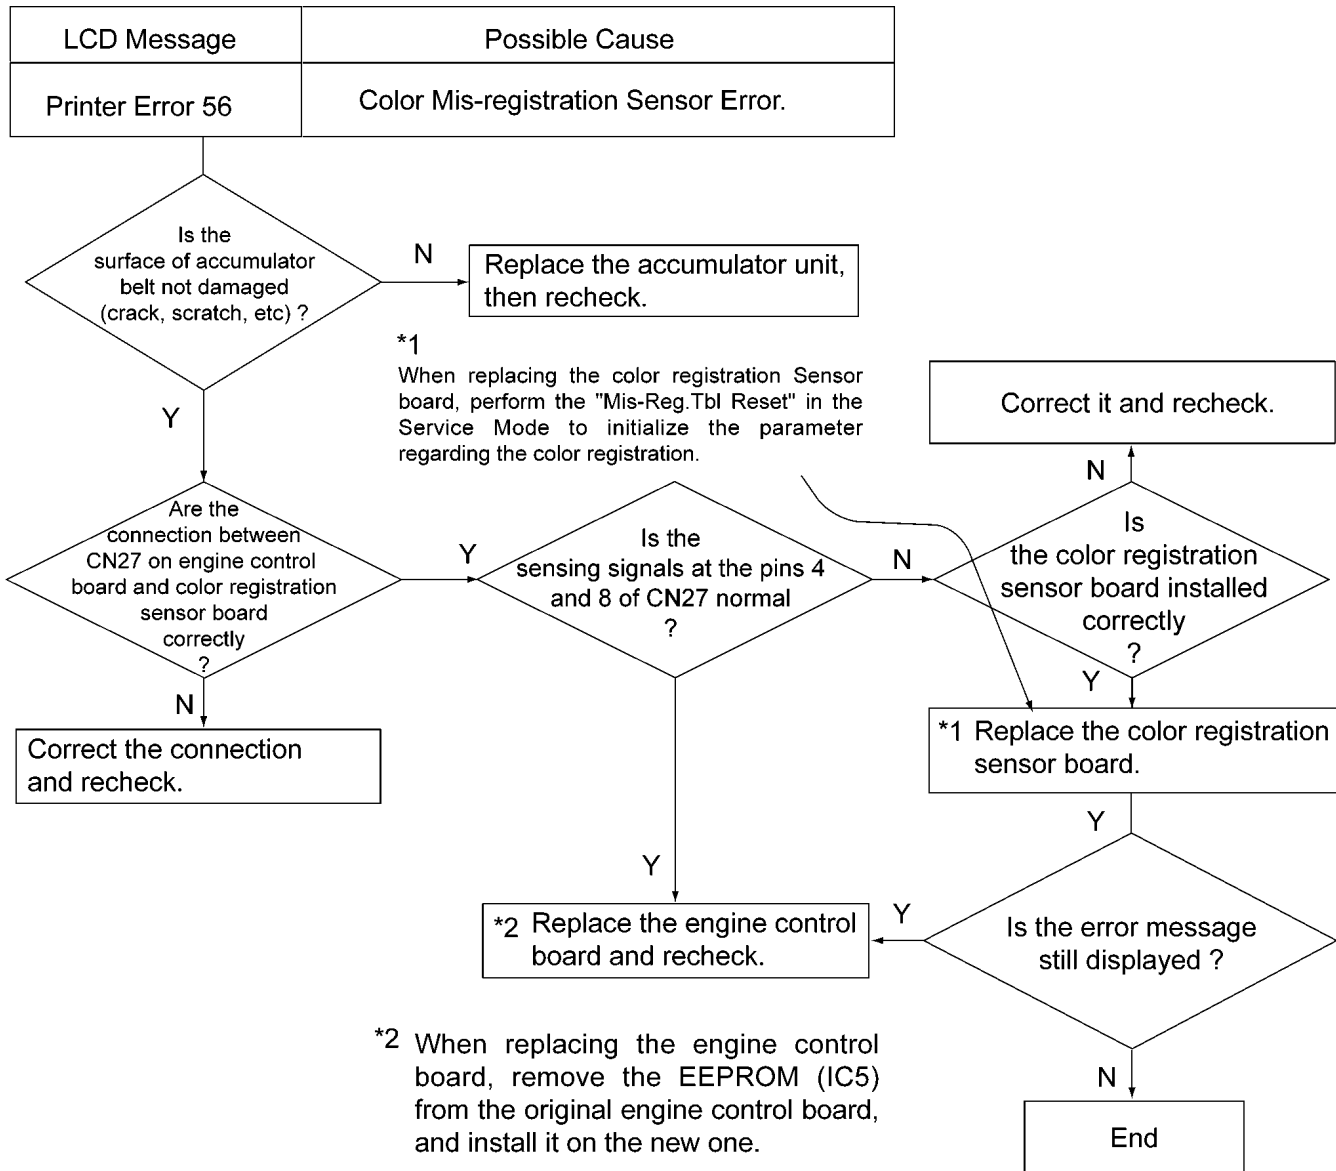

LCD Message	Possible Cause
Printer Error 53	Cooling Fan for PSU Error

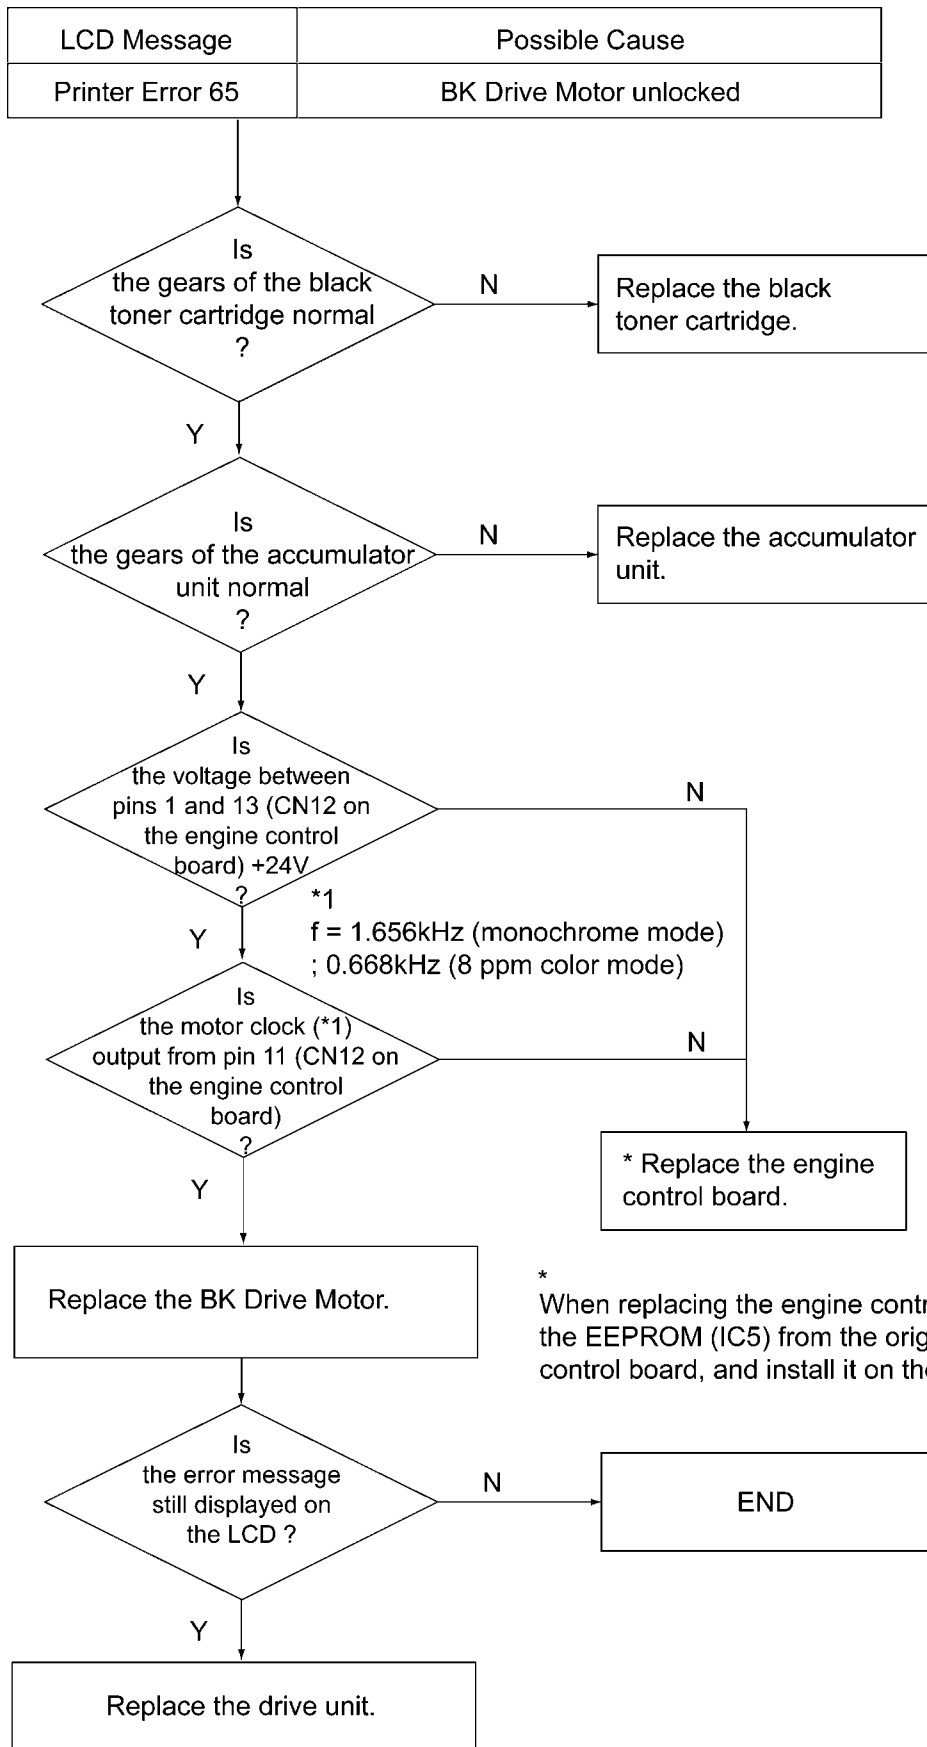

13.5.15. Printer Error 54

13.5.16. Printer Error 56

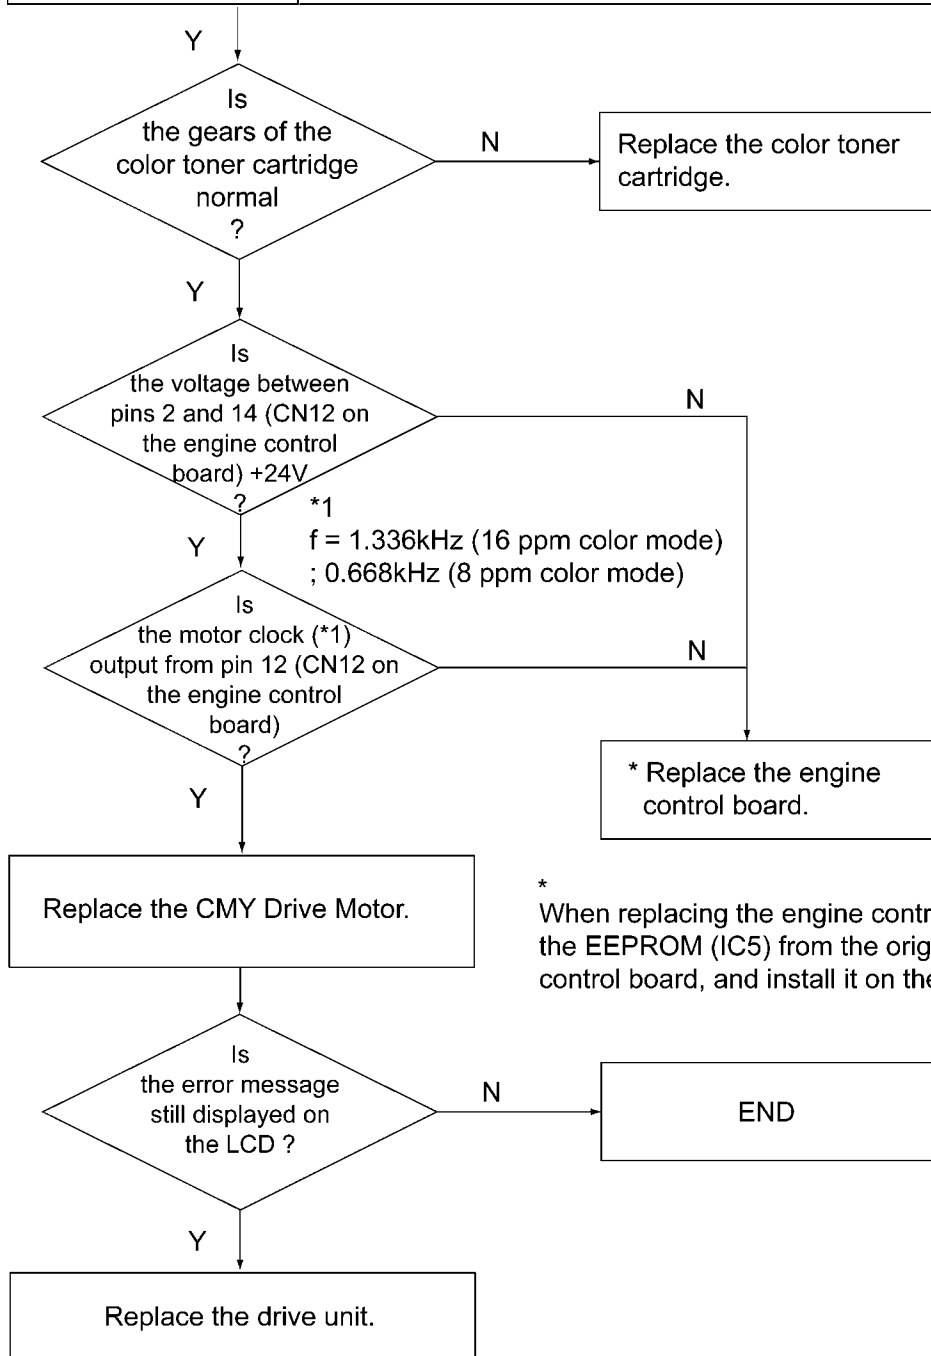

13.5.17. Printer Error 65

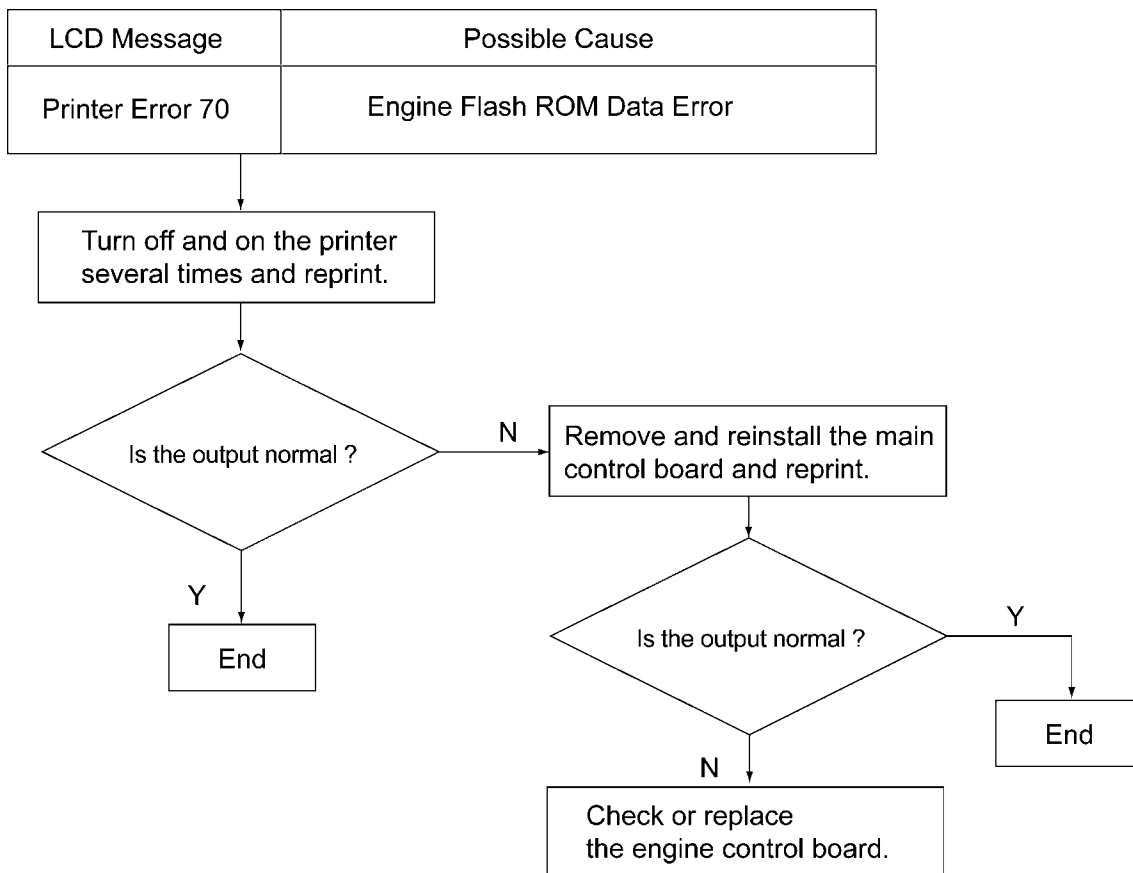

13.5.18. Printer Error 66

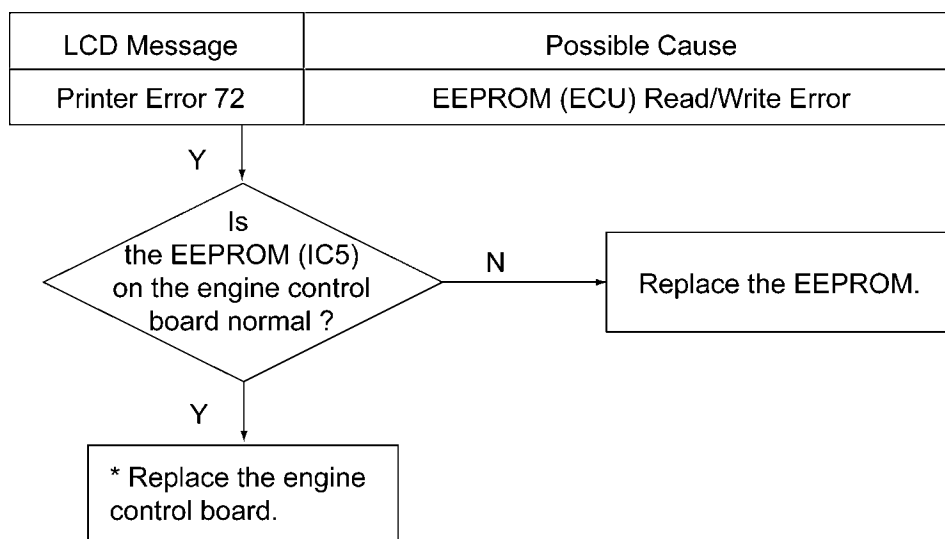

LCD Message	Possible Cause
Printer Error 66	CMY Drive Motor unlocked

13.5.19. Printer Error 70

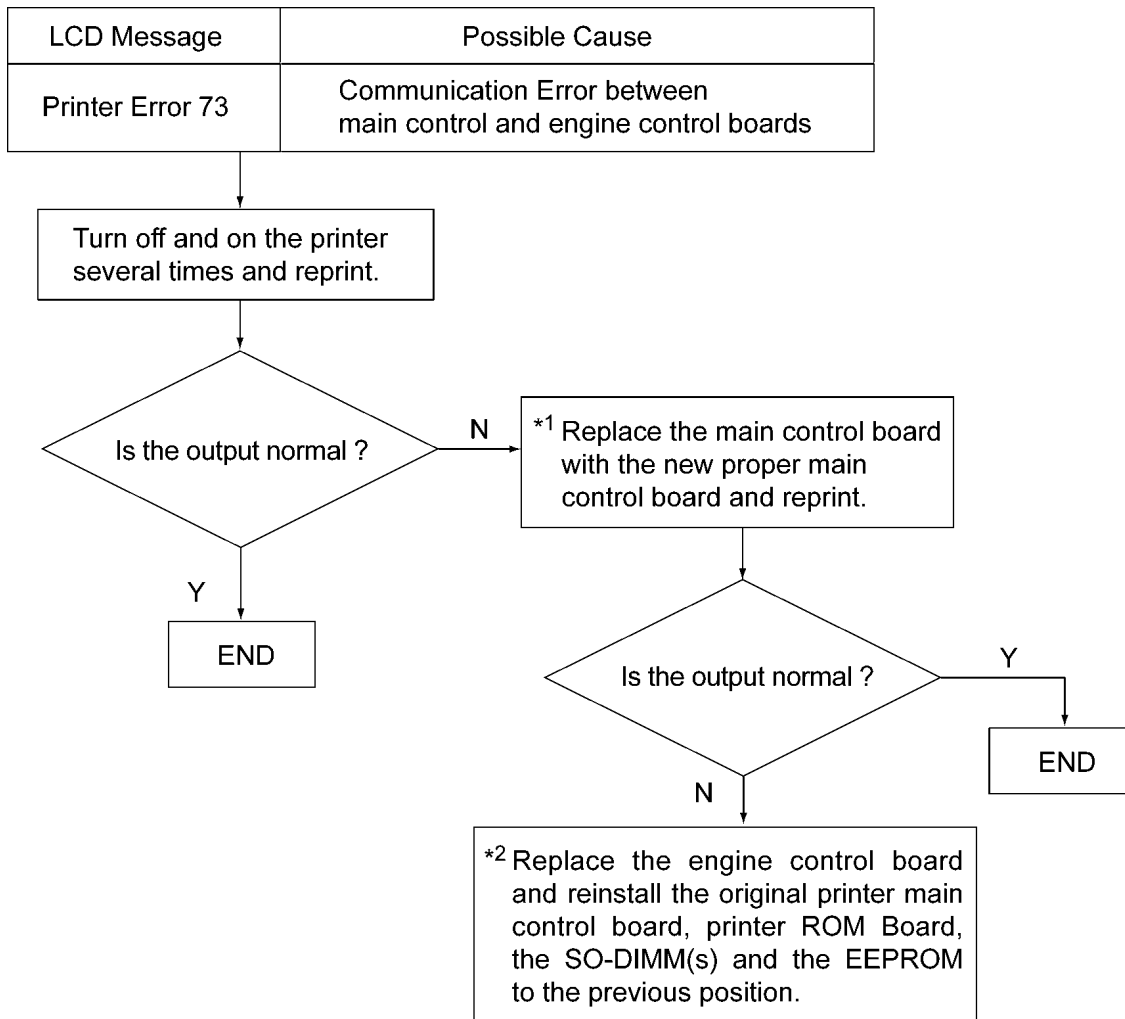

13.5.20. Printer Error 72

*
When replacing the engine control board, remove the EEPROM (IC5) from the original engine control board, and install it on the new one.

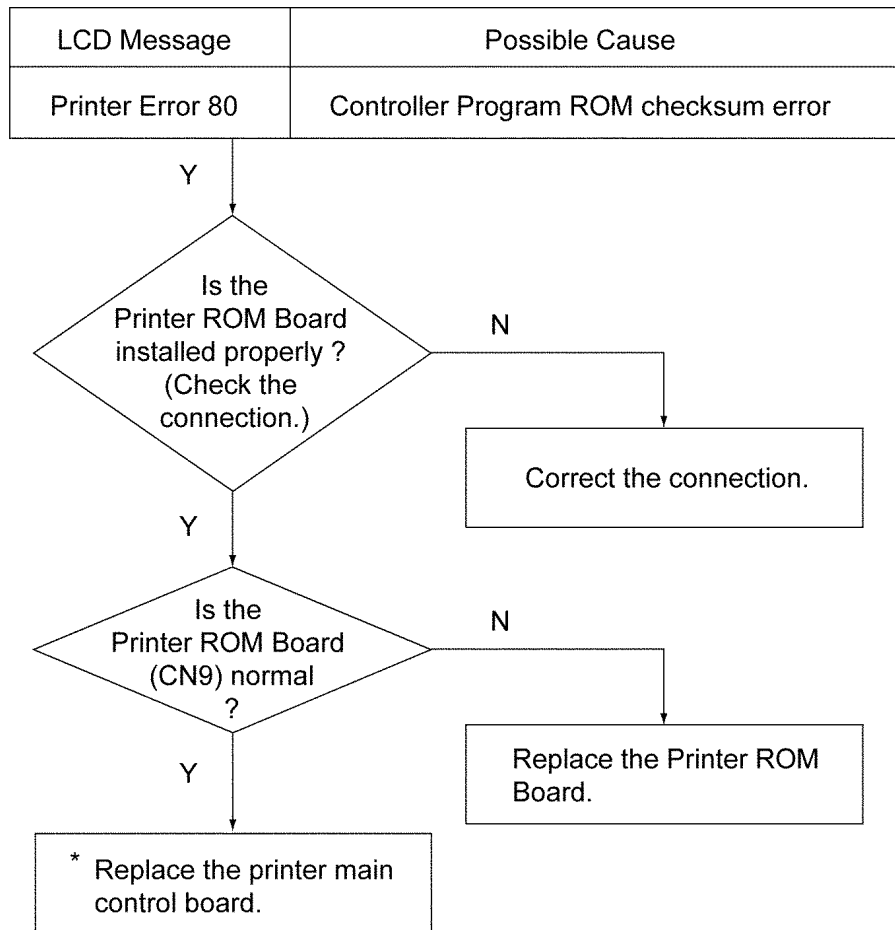

13.5.21. Printer Error 73

*1 When replacing the printer main control board, remove the Printer ROM Board, the SO-DIMM(s) and the EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

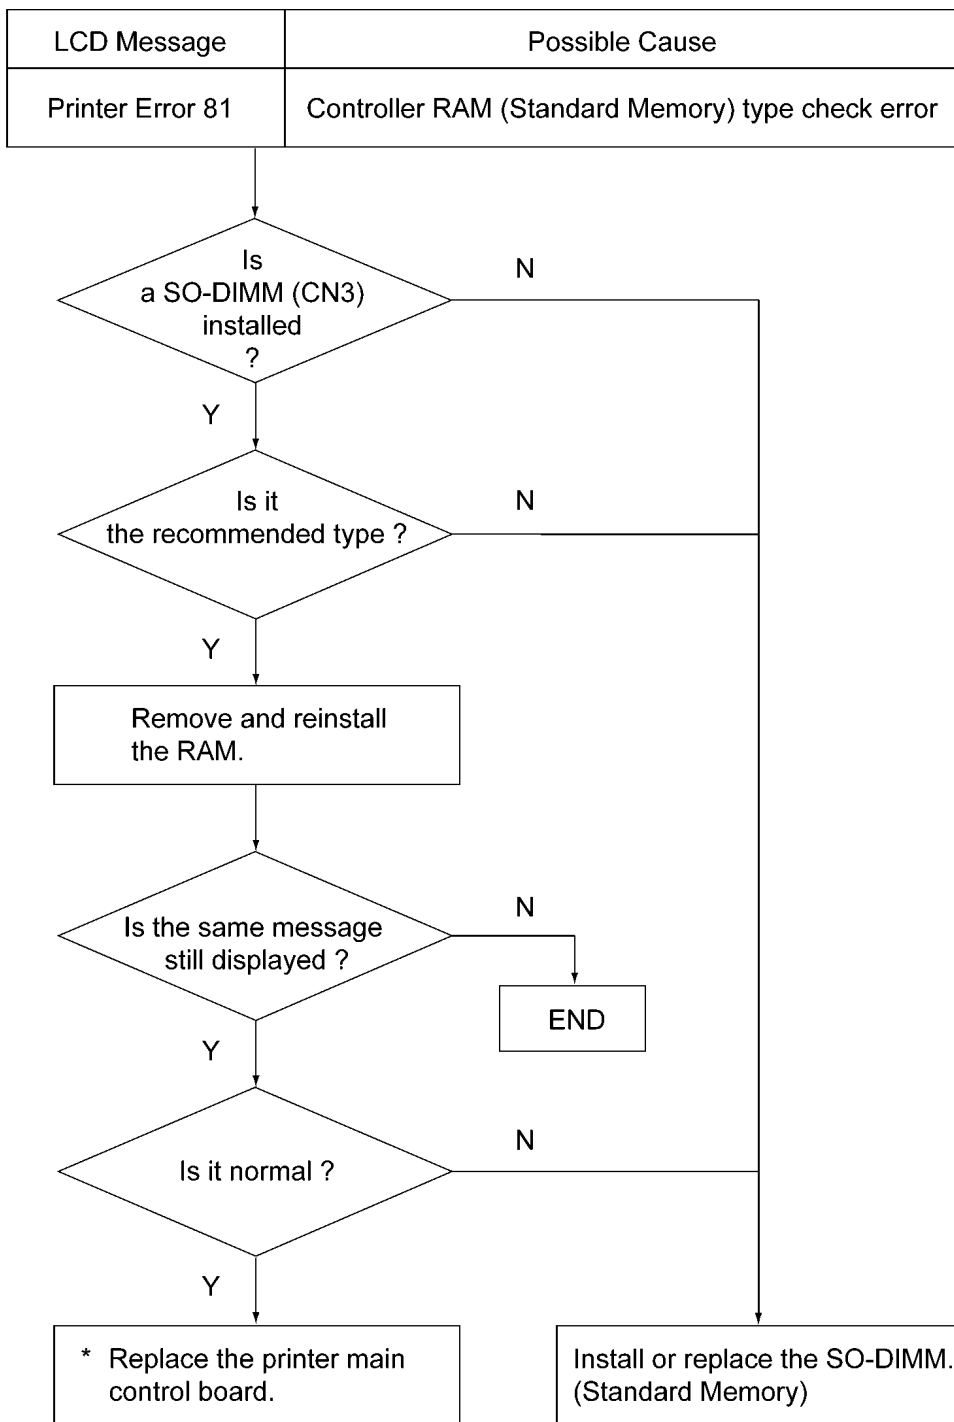

*2 When replacing the engine control board, remove the EEPROM (IC5) from the original engine control board, and install it on the new one.

13.5.22. Printer Error 80

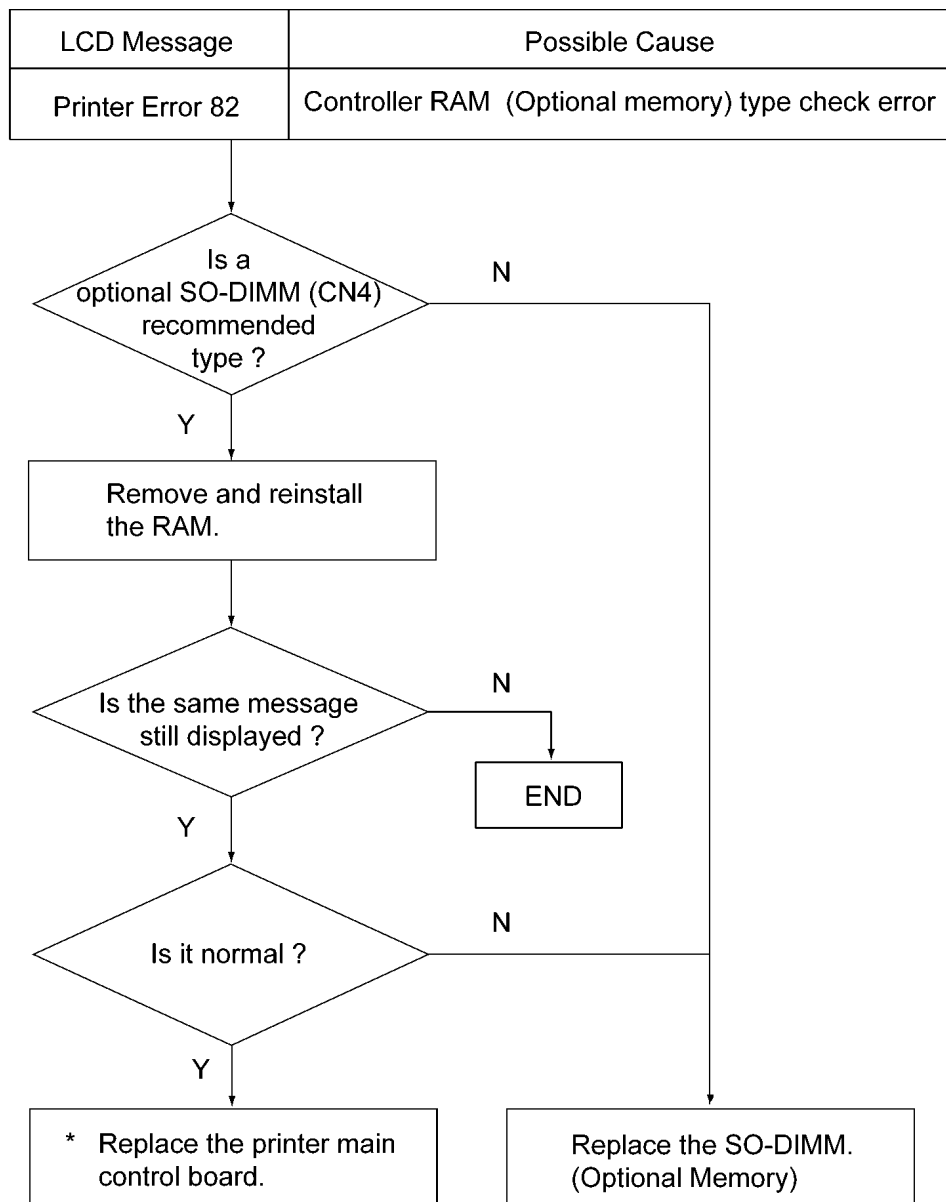

* When replacing the printer main control board, remove the Printer ROM Board, the SO-DIMM(s) and the EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

13.5.23. Printer Error 81

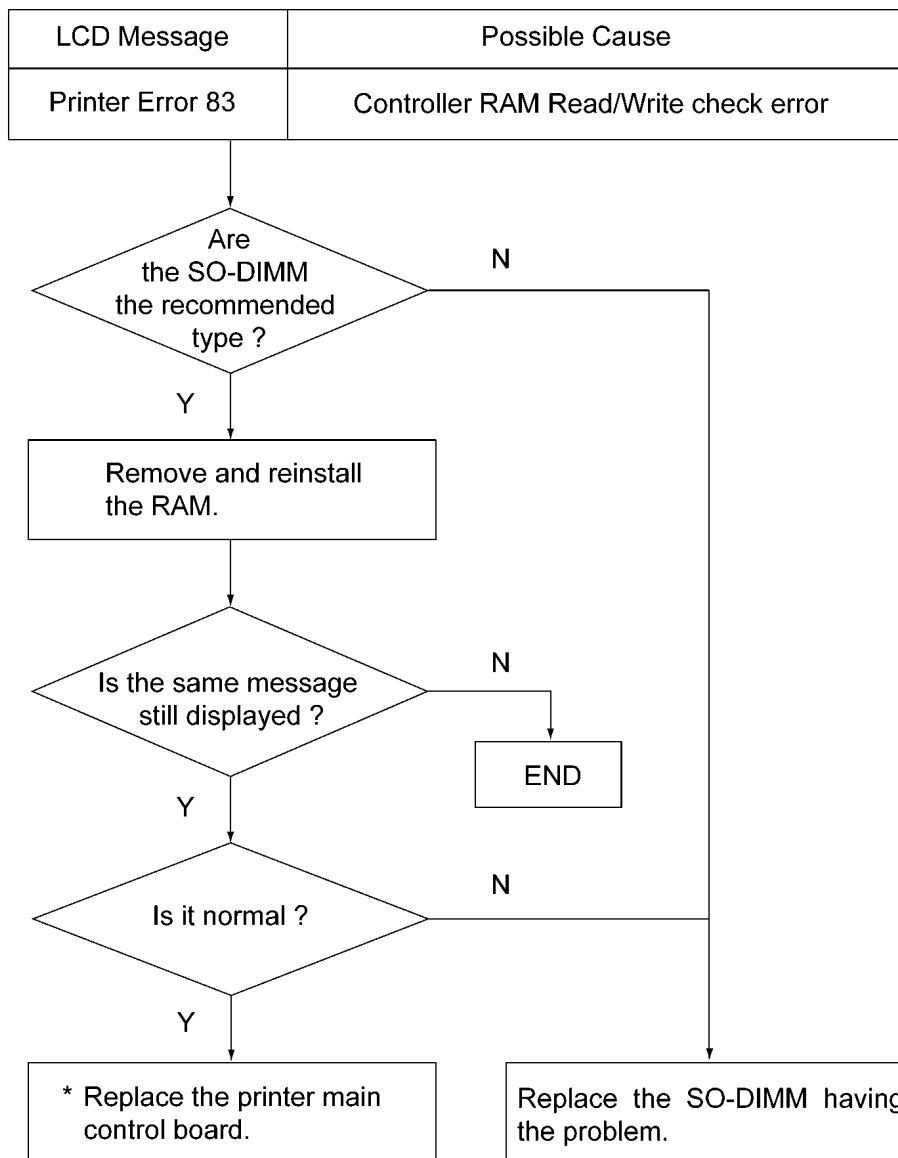

* When replacing the printer main control board, remove the Printer ROM Board, the SO-DIMM(s) and the EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

13.5.24. Printer Error 82

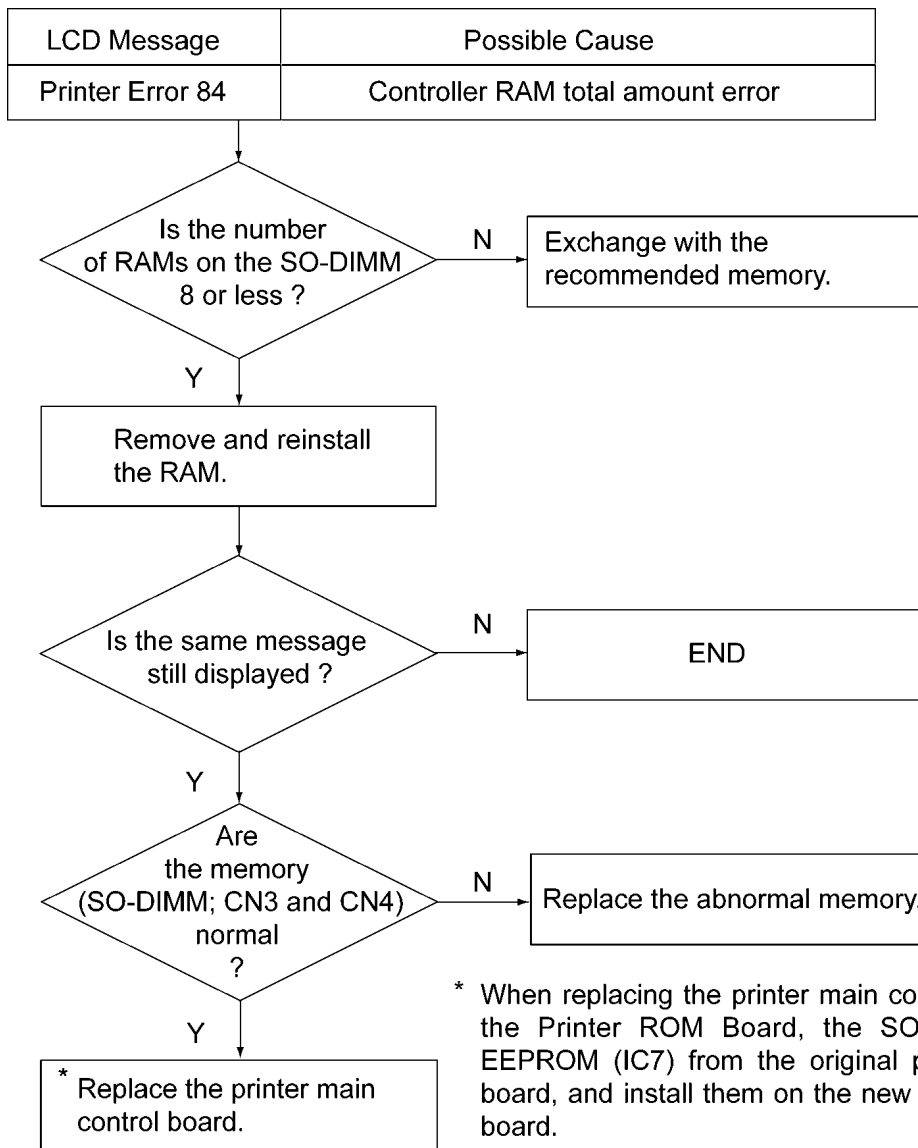

* When replacing the printer main control board, remove the Printer ROM Board, the SO-DIMM(s) and the EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

13.5.25. Printer Error 83

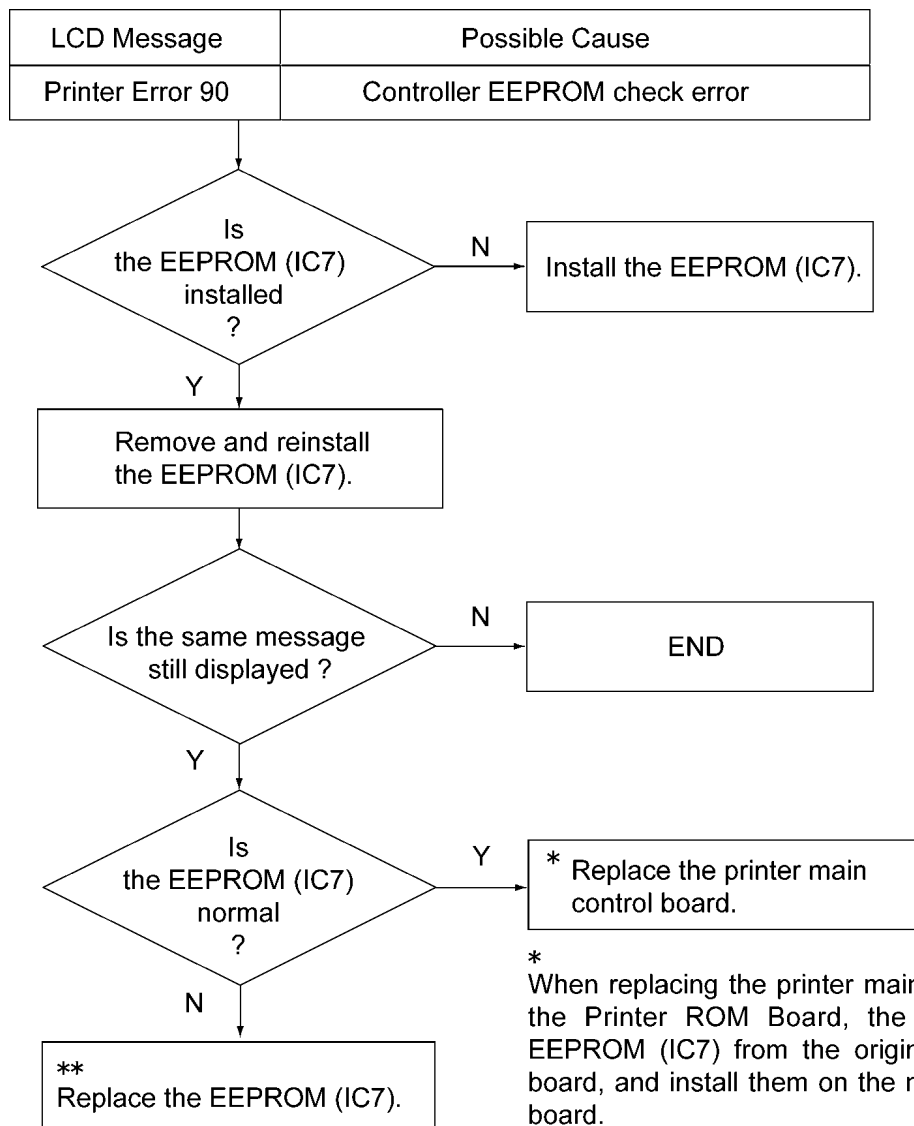

* When replacing the printer main control board, remove the Printer ROM Board, the SO-DIMM(s) and the EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

13.5.26. Printer Error 84

13.5.27. Printer Error 90

When exchanging the EEPROM (IC7) with new one, the Language, Media Type, PCL Symbol Set and Custom Size Unit must be reset as shown below. All of the following default settings (Language, Media Type, Paper Size, etc.) are set by selecting desired country in "Country" menu of section 6.11 Controller Setting Item Menu.

Application Countries / Areas	Default Setting				
	Language	Media Type	Paper Size	PCL Symbol Set	Custom Size Unit
U.S.A.	English	Plain Paper	Letter	PC-8	Inch
Canada				ISO Latin 1	
United Kingdom, Australia, Germany, etc.			A4	ISO Latin 1	mm

13.5.28. Printer Error 91, Printer Error 92 and Printer Error 96

LCD Message	Possible Cause
Printer Error 91 Printer Error 92 Printer Error 96	ASIC 1 error ASIC 2 error Network Chip Error

Turn off and on the printer several times.

Is
Printer Error 91
(Printer Error 92, Printer Error 96)
still displayed ?

N

END

Y

Check or replace the printer
main control board.

*
When replacing the printer main control board, remove the Printer ROM Board, the SO-DIMM(s) and the EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

13.5.29. Printer Error 93, 94

LCD Message	Possible Cause
Printer Error 93 Printer Error 94	CPU Error 1 CPU Error 2

Turn off and on the printer
and reprint.

Is the output normal ?

Y

END

N

Is the CPU Fan rotating ?

N

* Replace the CPU Fan.

Recheck

Replace the SO-DIMM (s) and reprint.

Is the output normal ?

N

* Check or replace the
main control board.

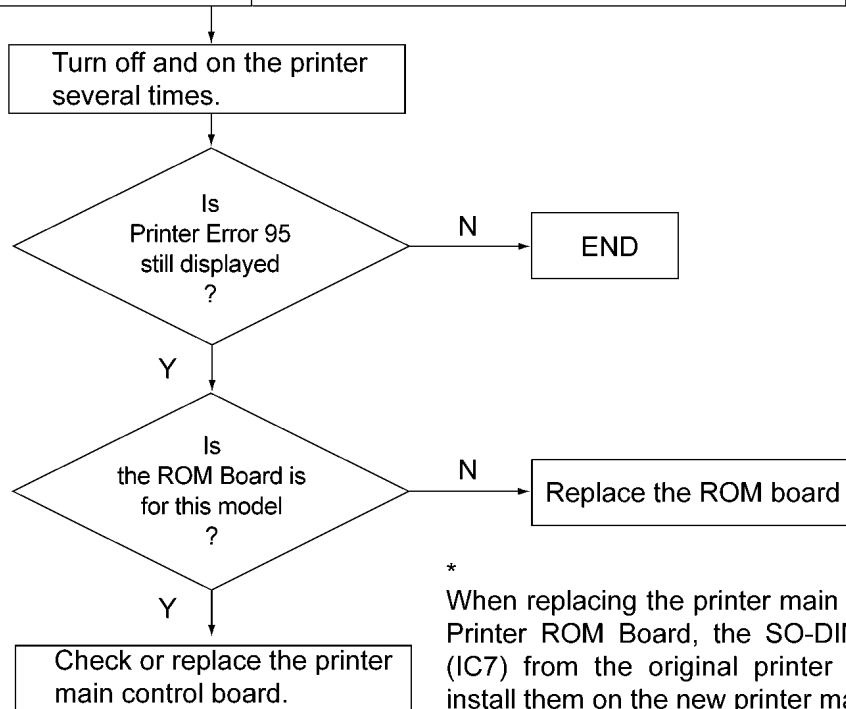

END

*

When replacing the printer main control board, remove the Printer ROM Board, the SO-DIMM(s) and the EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

13.5.30. Printer Error 95

LCD Message	Possible Cause
Printer Error 95	CPU Error 3 (Configuration)

*
When replacing the printer main control board, remove the Printer ROM Board, the SO-DIMM(s) and the EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

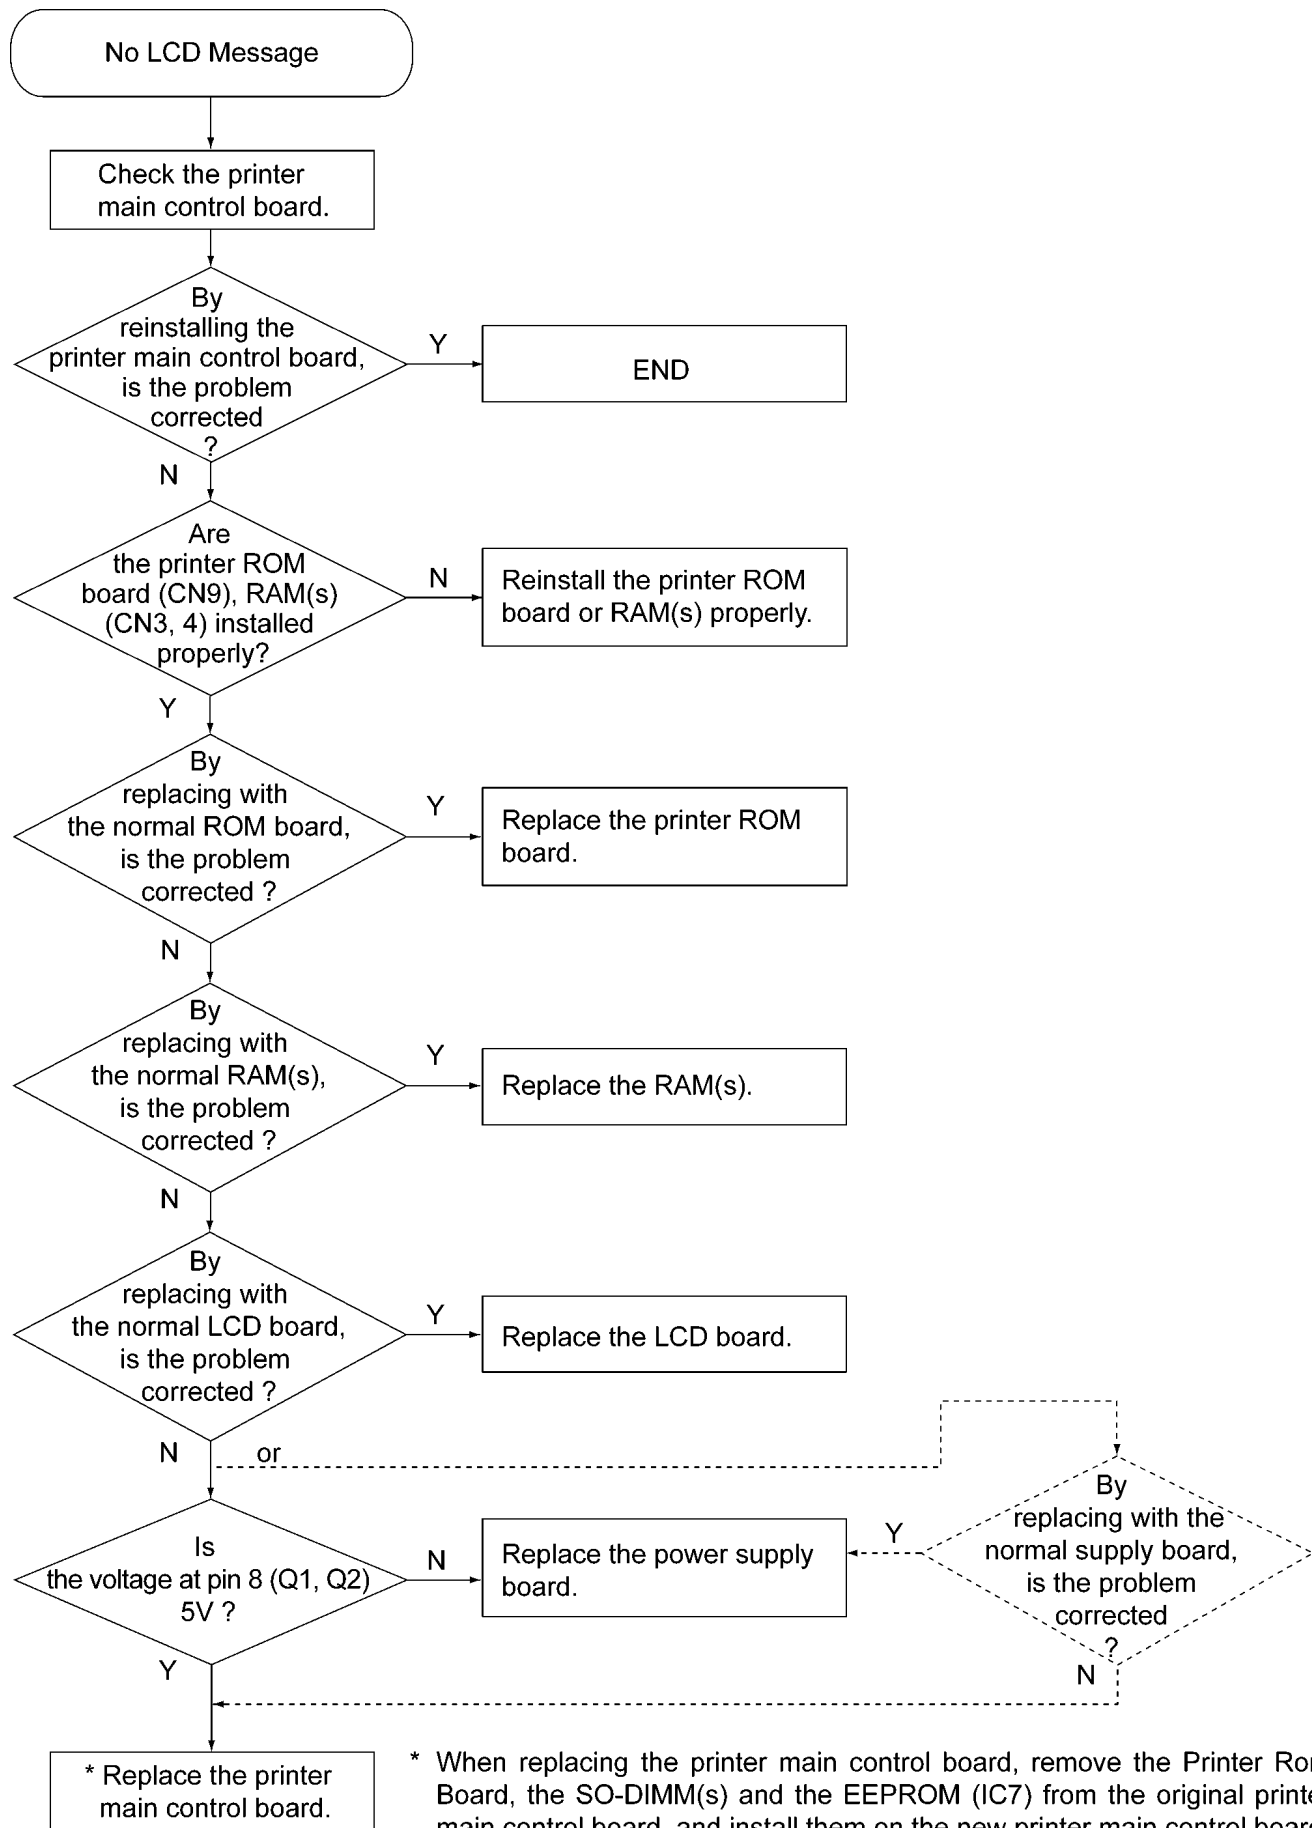

13.5.31. Printer Error 98

LCD Message	Possible Cause
Printer Error 98	CPU High Temperature Error

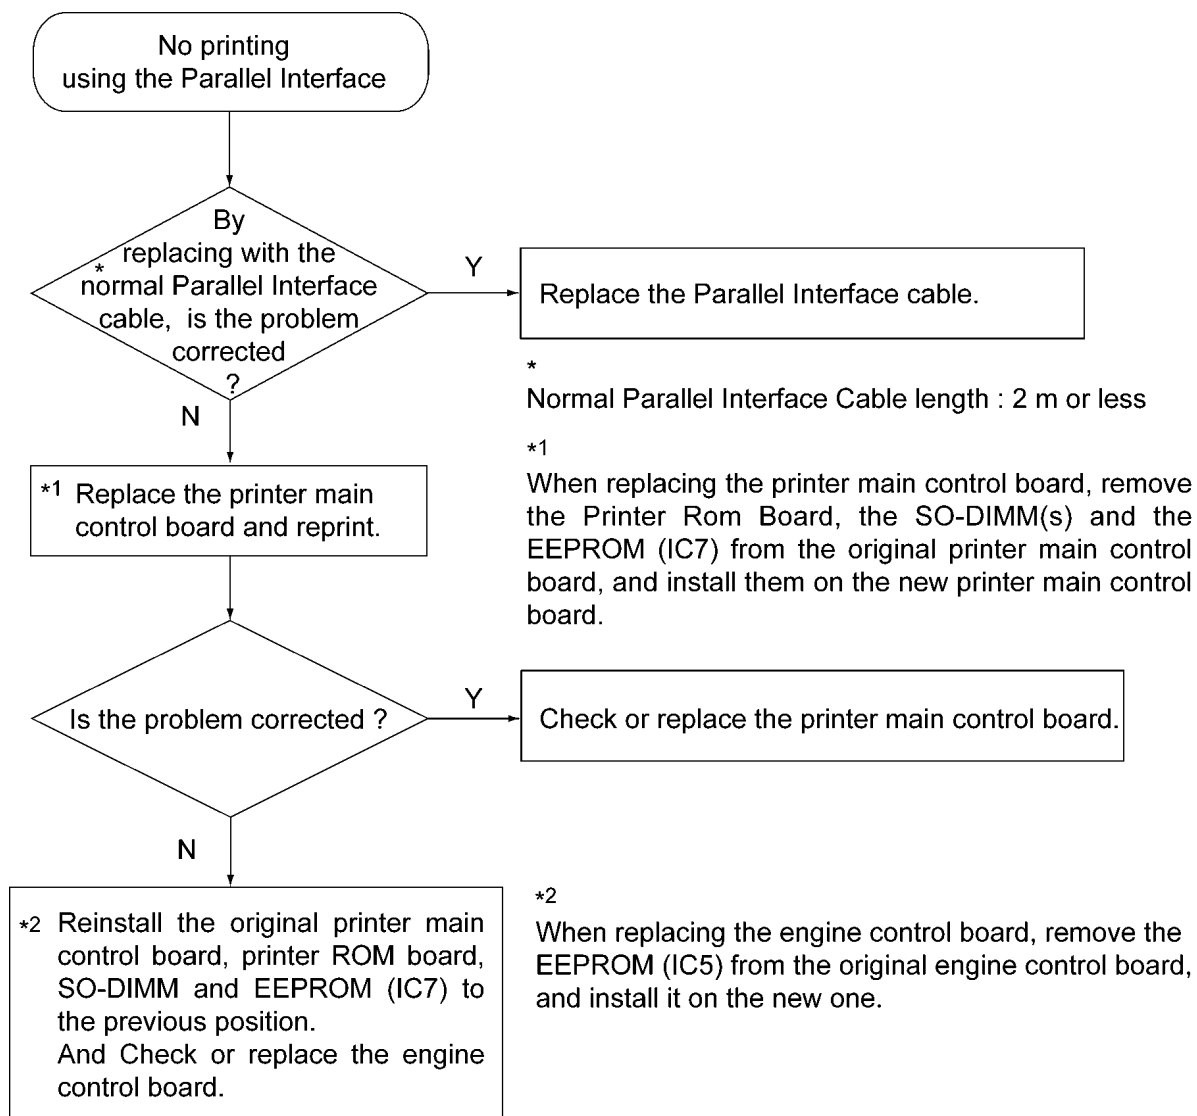

* When replacing the printer main control board, remove the Printer Rom Board, the SO-DIMM(s) and the EEPROM (IC7) from the original printer main control board, and install them on the new printer main control board.

13.7. No Printing

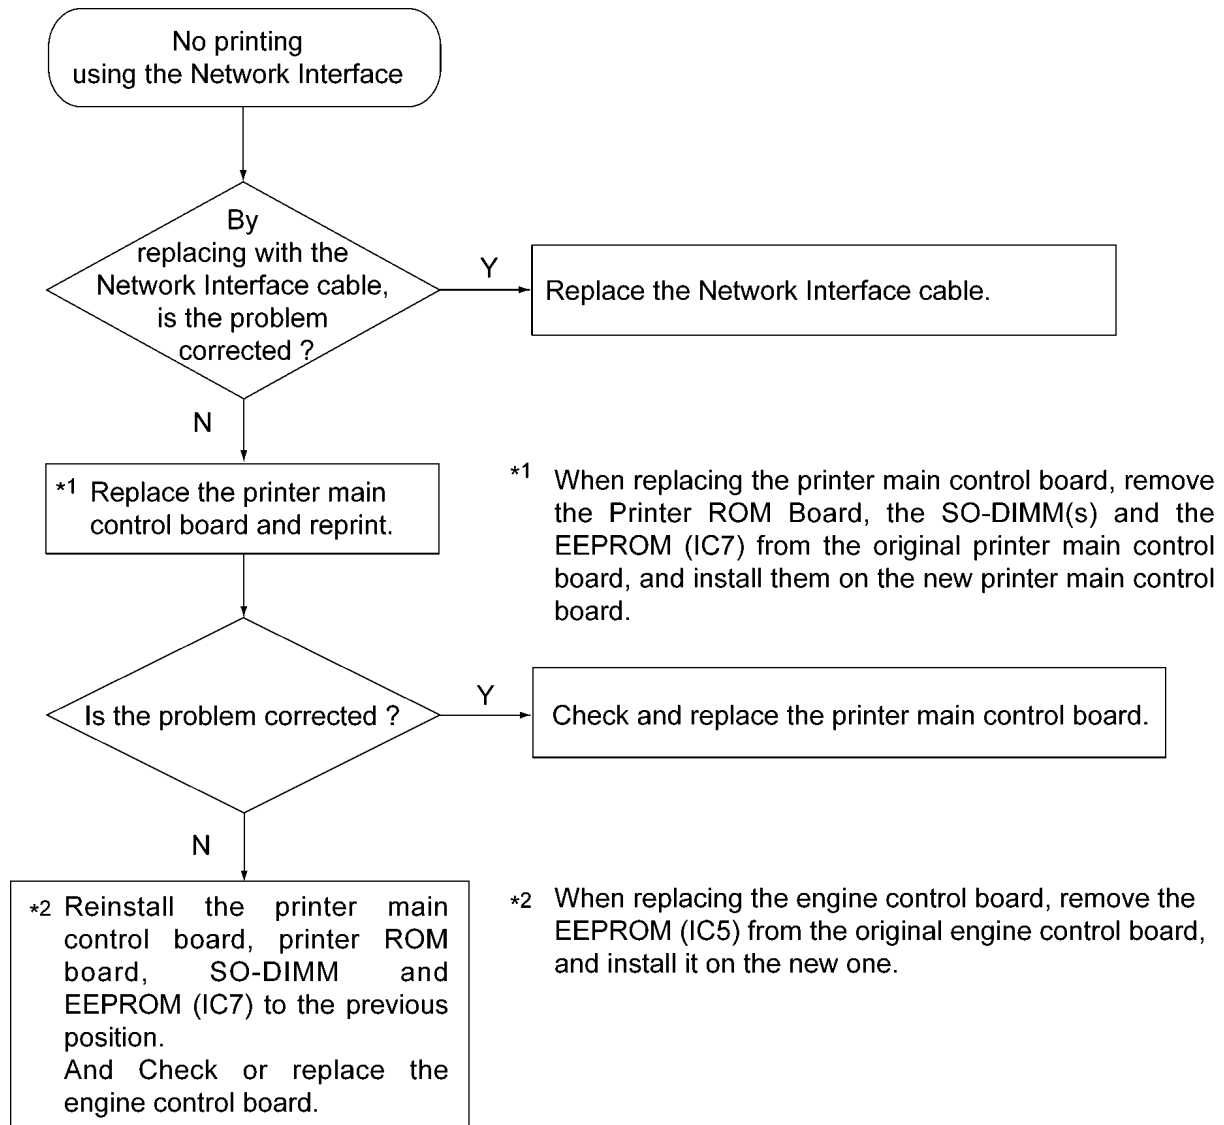

13.7.1. Using Parallel Interface Cable

13.7.2. Using USB Interface Cable

13.7.3. Using Network Interface

14 Replacement Parts List with Lubrication Guide

Notes:

1. Important safety notice.

Components identified by  have special characteristics important for safety.

When replacing any of these components, use only manufacturer's specified parts.

2. The S mark is for service standard parts and may differ from production parts.

3. The marking (RTL) indicates that the Retention Time is limited for this item. After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependent on the type of assembly and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.

(View 1)

Notice :

The engine control board complete (Ref.No : d17) that is supplied as the repair part does not contain this IC (IC5 : EEPROM). When replacing the engine control board, the original IC5 on the original engine control board must be installed on the new board. If the original IC5 is damaged, install the new IC5 on the new board.

w12	PJPPB0004Z	Plastic Bag for printer	
w13	PJPNB0100Z	Cassette Inner Pad	
w14	PJHRB0413Y	HDD Holder	
w15	PJHRB0414Y	HDD Lock Lever	
w16	XYN3+C6FJ	Screw for fixing HDD	

14.8. Toner Cartridge Dummy Case

Ref. No.	Part No.	Part Name & Description
x1	PJYD00HP0M	Dummy Toner Cartridge Case (Black)
x2	PJYD00HP1M	Dummy Toner Cartridge Case (Cyan)
x3	PJYD00HP2M	Dummy Toner Cartridge Case (Magenta)
x4	PJYD00HP3M	Dummy Toner Cartridge Case (Yellow)

14.9. Print Cartridge Dummy Case

Ref. No.	Part No.	Part Name & Description
y1	PJYD00HP4M	Dummy Print Cartridge Case (Black)
y2	PJYD00HP5M	Dummy Print Cartridge Case (Color)

14.10. PbF Solder Service Part Number

The service part number for the recommended PbF solder is RMA02M705-08.

When the recommended PbF solder is not available at Senju Metal Industry Co., Ltd., use this PbF solder part number.
